INSTRUCTIONS FOR USING THIS CATALOG

This catalog is a cumulative listing of all National Institute for Occupational Safety and Health (NIOSH) numbered publications, Health Hazard Evaluation/Hazard Evaluation and Technical Assistance (HHE/HETA) reports, Contract (CON) reports, Industrywide Study (IW) reports, Control Technology (CT) reports, and Miscellaneous reports. The publications listed in this catalog are generally not available from NIOSH and must be purchased from the Government Printing Office (GPO) or the National Technical Information Service (NTIS). Instructions for ordering from GPO and NTIS are provided on pages vii-viii.

This catalog is arranged in seven sections. An explanation and sample citation are listed at the beginning of each section. Abbreviations used throughout the catalog are listed on page vii.

Section I - lists NIOSH numbered publications, both by publication number (Section I-A) and alphabetically (Section I-B). If only the title is known, refer to the alphabetical list in Section I-B. Then refer to the numbered publications list in Section I-A for the complete citation with ordering information.

Section II - lists Health Hazard Evaluation/Hazard Evaluation and Technical Assistance reports by publication number. This list is in numerical order by the last four digits of the HHE/HETA number and includes the complete citation with ordering information.

Section III - lists Industrywide Study reports by field number and includes the complete citation with ordering information.

Section IV - lists Control Technology reports by field number and includes the complete citation with ordering information.

Section V - lists Contract reports by number and includes the complete citation with ordering information.

Section VI - lists Miscellaneous reports that cannot be categorized by any of the topics in the above five sections. These entries are listed alphabetically by title and include the complete citation with ordering information.

Section VII - contains an extensive subject index guide to all NIOSH documents. Each NIOSH document has been indexed by industry, process, hazard, chemical, evaluation technique, or other useful category as applicable. Each document may therefore be listed under several index terms. For complete citations of entries in the subject index, refer to the appropriate section.

Note that an individual document may be listed in more than one section. For example, a numbered publication developed under contract will be listed in both Sections I and V.

NIOSH documents may be available from GPO, NTIS, or both, as indicated in the complete citation. Those marked "ORDER FROM GPO" or "ORDER FROM NTIS" must be obtained from those agencies. If a title appears with no citation, the document may be available from NIOSH until complimentary copies are exhausted. To receive a single copy, please use the NIOSH order blank on page xv.

NTIS FOREIGN AGENTS

NTIS has established a worldwide network of agents from whom NTIS documents may be obtained. If you are ordering from one of the 51 countries listed below, you must order from the applicable NTIS agent; orders sent directly to NTIS will be returned. Because prices of NTIS publications may vary with each agent, you should contact your agent before ordering. If you are ordering from countries other than the 51 specified below, you may send your order to NTIS in the United States. NTIS prices for those foreign orders are double those shown in this catalog. Payment is required in U.S. currency.

SECTION I-A

NUMBERED PUBLICATIONS
NUMERICAL LIST WITH COMPLETE CITATION

This section lists all NIOSH numbered publications in numerical order. A sample citation appears below:

SAMPLE CITATION

NIOSH numbered publications are generated internally, by contract, or by an interagency agreement. Publications in this category include Criteria Documents (CD), alerts, Current Intelligence Bulletins (CIB), Health and Safety Guides (HSG), symposium or conference proceedings, NIOSH administrative and management reports, scientific investigations, data compilations, and worker-related booklets.

CDs recommend occupational safety and health standards to the Department of Labor. For the purpose of this catalog, Special Hazard Reviews and Occupational Hazard Assessments are classified as CDs because they frequently contain recommendations. Usually included as part of the recommended standard is a Recommended Exposure Limit (REL), i.e., the concentration of a substance in the occupational environment above which workers should not be exposed. Also included in these documents are recommendations for personal protective equipment and clothing, work practices and sanitation, hazard notification, medical surveillance, and recordkeeping. CDs on specific processes or operations may not have RELs but may recommend work practices, control limits and control measures. NIOSH publishes these documents after critically evaluating all available data that may be relevant to recommending a standard. Alerts are brief publications that are intended to reduce injuries and fatalities and to stimulate research on effective preventive measures. They are intended to be used by those persons who can directly intervene in the work environment to eliminate the problem quickly and thus reduce risk.

CIBs convey important public health information and recommend protective measures. These documents advise the occupational safety and health community (including academia, industry, labor, and public interest groups) of new data that may affect their programs or perception of the hazard.

HSGs provide basic information for employers and employees to assist them in their efforts to provide a safe and healthful work environment.

SECTION III

INDUSTRYWIDE STUDY REPORTS
NUMERICAL LIST WITH COMPLETE CITATION

This section lists Industrywide Study (IW) reports in numerical order by field number. IW reports without field numbers are located at the beginning of this section in alphabetical order. A sample citation appears below.

SAMPLE CITATION

The Industrywide Study Branch assesses whether specific occupational exposures of certain workers are associated with adverse health consequences. Study designs vary (cohort, case control, proportionate mortality, cross-sectional incidence, reproductive questionnaire) depending on the question to be addressed and the availability of data. The majority of the reports listed in this section are industrial hygiene surveys that support the above types of studies. These reports document information obtained during short 1- to 2-day walk-through surveys at plant sites to evaluate their suitability for industrywide studies. Little or no sampling is done during walk-through surveys. In-depth survey reports document detailed exposure information obtained during a 1-week survey of a plant site. Extensive air sampling data are usually contained in an in-depth survey report.

SECTION IV

CONTROL TECHNOLOGY REPORTS NUMERICAL LIST WITH COMPLETE CITATION

This section lists Control Technology (CT) reports in numerical order by field number. A sample citation appears below:

The Engineering Control Technology program at NIOSH conducts field studies to evaluate effective health hazard control systems and promotes the widespread use of these systems through symposia and publications. The field studies begin with preliminary or walk-through surveys to evaluate control systems subjectively to identify those worthy of in-depth study. Generally, few if any air sampling or ventilation measurements are taken during these surveys. In-depth surveys are performed to provide a detailed evaluation of selected control systems. Normally, extensive air samples and ventilation measurements are taken. Work practices and use of personal protective equipment are documented. Also, use of continuous workplace monitoring is noted.

Summary reports are also prepared combining information obtained from several in-depth surveys of similar processes. Control systems for similar processes are compared in these reports.

SECTION VII

SUBJECT INDEX

This section contains an alphabetical subject index of NIOSH documents. The documents are listed by title within each index term. Identifying abbreviations and report numbers appear to the left of each title.

The index terms are based on the major concepts covered by NIOSH publications and reports, and are not designed to exhaustively cover the content of a particular publication. An effort has been made to group similar concepts under headings common to the field of occupational safety and health rather than to select unique terms for each publication.

Hazards encountered, industries surveyed, and processes evaluated are selected where applicable.

Chemical substances are selected as index terms where significant mention is made of them. Individual substances are alphabetized by the first letter in the chemical name as listed in the subject term. For example, ortho-anisidine is listed under "o". Compendia of information on chemical substances are not indexed under the contained substances, but are indexed under the general heading "CHEMICAL SUBSTANCES."

Do not order NIOSH documents from this list! Refer to the appropriate Section.
