1980 REGISTRY OF TOXIC EFFECTS OF CHEMICAL SUBSTANCES

VOLUME TWO

NIOSH

HOW TO USE THIS REGISTRY

1. Read the Preface on page v of Volume One for an explanation of changes in the 1980 Registry.

2. To find the main entry for a substance:

   a. Look up the substance name alphabetically, ignoring prefixes and numerals. Volume One contains names beginning with A through I; Volume Two contains names beginning with J through Z.

   b. If the name sought is the Registry prime name, it is preceded by a nine-position alphanumeric RTECS accession number. The complete RTECS data record follows the prime name.

   c. If the name sought is a Registry synonym, it is followed by a "see" cross-reference to the applicable prime name accession number. Look up the indicated number in Volume One, which contains accession numbers AA2441000 through NY5645200, or Volume Two, which contains numbers NY5775000 through ZI2975000.

3. The data record for each substance includes, where applicable and available:

   substance prime name and synonyms
   date when data record was last changed
   CAS number
   molecular weight
   molecular formula
   mutation data and references
   irritation data and references
   toxic dose data and references
   aquatic toxicity rating
   toxicology reviews
   standards and regulations
   NIOSH criteria documents
   NTP carcinogenesis bioassay status
   NIOSH analytical methods
   NIOSH current intelligence bulletins
   EPA TSCA status

   An example of this record appears in Volume One, Figure 1. An explanation of each data field appears in the Detailed File Description.

4. A complete CAS number - RTECS accession number index, in numerical order by CAS number, begins on page 843 of Volume Two.

5. A complete list of all bibliographic references alphabetized by CODEN begins on page 973 of Volume Two.
