I. Introduction to the Environmental Public Health Indicators Project

Environmental public health indicators (EPHIs) can be used to assess our health status or risk as it relates to our environment. They may be used to assess baseline status and trends, track program goals and objectives, and build core surveillance capacity in state and local agencies. The best indicators are those that reliably predict the relationship between human health and the environment, are routinely collected, and have well accepted definitions and data collection standards.

Indicators provide information about a population’s health status with respect to environmental factors and may be particularly useful when clear measurable links are not available. As such, they can measure health or a factor associated with health in a specific population. For example, because the amount of lead in paint in older homes is difficult to measure, we use blood lead measurements in children to indicate both the lead paint hazard and the risk for childhood lead poisoning. Similarly, we measure microbial contamination in the water to indicate the risk for gastrointestinal illness.

There are few diseases for which clear environmental etiologies have been established. Environmental health assessment efforts therefore need information not only for the diseases that are environmentally related, but also for potential environmental hazards and exposures that pose a risk to human health.

To address this gap in our understanding of environmentally related diseases, the Council of State and Territorial Epidemiologists and CDC identified specific areas and indicators that should be evaluated. The future evaluations of these indicators should consider how well the indicator predicts human health and/or environmental conditions and data availability. In addition, the evaluators should also consider how best to standardize data collection and define the indicators. We believe that the development of a common set of reliable indicators for tracking environmental exposures and adverse health effects could then be used by state programs to focus on priority surveillance systems and better monitor the health status of their communities.

The national application of these proposed indicators could allow states to connect their work with that of other states and provide a tool for regional assessment of the issues that cross state boundaries.

II. Description of the Environmental Public Health Indicators Project

Project Goal: Identify indicators of environmental hazards and health effects that a state health department can use to develop a comprehensive environmental public health program.

Objectives
- Incorporate noninfectious diseases into a national public health surveillance system.
- Identify program and policy needs.
- Bridge the gap between environmental protection and public health data and programs.

Proposed Uses
1) Enable surveillance of status and trends to
   - prevent known or suspected adverse public health events associated with environmental exposures,
   - detect new adverse health events associated with environmental exposures, and
   - provide efficient and consistent reporting mechanism(s).

2) Track program goals and objectives
   - aid in program and policy development, planning, and evaluation and support existing programs;
   - guide research initiatives; and
   - develop new program initiatives.

3) Build core environmental public health capacity with other agencies to provide services, programs, and research that help to sustain health.

Conceptual Framework
The organization of an indicator system is helpful for identifying types of indicators and the relation between types. Our indicators are organized into a Hazard-Exposure-Health Effect-Intervention structure, based on concepts from Thacker et al, which describes hazard, exposure, and outcome surveillance for environmental public health. [Thacker SB, Stroup DF, Parrish RG, Anderson HA. Surveillance in Environmental Public Health: Issues, Systems, and Sources. Am J Public Health 1996;86(5):633-8.] We adapted structural components and concepts from the Organisation for Economic Co-operation and Development=s Pressure-State-Response model for indicators of sustainable development and from the World Health Organization=s model, which identifies driving forces, pressures, states, exposures, effects, and actions for indicators of environmental protection and public health.
II. Description of the Environmental Public Health Indicators Project

Definitions

Environmental public health: Environmental public health focuses on the interrelations between people and their environment, promotes human health and well-being, and fosters a safe and healthful environment.

An indicator identifies and communicates a system's status. An environmental public health indicator (EPHI) provides information about a population's health status with respect to environmental factors. It can be used to assess health or a factor associated with health (i.e., risk factor, intervention) in a specified population through direct or indirect measures.

Topic of indicator: An indicator topic is a broad category under which indicators are organized. EPHI topics are based on Healthy People 2010 but the organizational structures of public health and environmental health programs were considered. As a result, topics may include pathways or sources (e.g., air, water), agents (e.g., lead, pesticides), or events (e.g., disasters, sentinel events) and may also overlap because of the complexity of environmental and public health laws and programs. An indicator, however, is generally included under only one topic, although it may be relevant to several.

Type of indicator: The type of an indicator describes how the indicator “fits” within the EPHI framework. An indicator will be categorized as a hazard, exposure, health effect, or intervention.

Hazard indicators: Conditions or activities that identify the potential for exposure to a contaminant or hazardous condition.

Exposure indicators: Biologic markers in tissue or fluid that identify the presence of a substance or combination of substances that could harm an individual.

Health effect indicators: Diseases or conditions that identify an adverse effect from exposure to a known or suspected environmental hazard.

Intervention indicator: Programs or official policies that minimize or prevent an environmental hazard, exposure, or health effect.

Tiers of indicators and their measures: The tier suggests the importance of the indicator and its measure with respect to policy or program considerations. Tiers include core, optional, and developmental measures. The initial assignment of an indicator may be subject to change as technologies or knowledge about the indicator change.

Core: A core indicator or measure should be included in a state health department’s basic environmental public health surveillance program. Measurements for these indicators may be available or could be made readily available. An indicator in the core tier must have at least one core measure and can have optional and developmental measures as well. Core indicators, endorsed in 2001 by the Council of State and Territorial Epidemiologists, have been identified for state health department use.
II. Description of the Environmental Public Health Indicators Project

Optional: An optional indicator or measure may be part of a basic environmental public health program for some states, depending on individual needs, priorities, and data availability. An indicator in the optional tier must have at least one optional measure but can also have developmental measures. When a core measure is identified, the indicator will change from optional to core.

Developmental: A developmental indicator or measure is one that may have environmental public health relevance, but the measurements either have not yet been established or pose significant interpretation challenges. An indicator in the developmental tier can have only developmental measures. If optional or core measures are identified, the indicator will be reclassified.

Attributes of an Ideal Indicator
- Measurable
- Trackable over time
- Based on demonstrated links between environment and health
- Useful and understood by diverse populations
- Informative to the public and to responsible agencies
- Tied to public health objectives
- Action-oriented
- Incorporated in clear-case definitions

Criteria for Nominating, Selecting, and Ranking Indicators
1) Classify the link between the proposed indicator and the public health issue, with preference given to direct measures.

2) Determine the public health effect of using the proposed indicator.

3) Evaluate the feasibility of the proposed indicator by using the following criteria:
   - measurability,
   - ability to be monitored over time,
   - accessibility at different levels (e.g. state, county, municipality),
   - accuracy (reliability, validity),
   - sensitivity to changes in underlying factors, and
   - timeliness

4) Assess the ability to incorporate the proposed indicator into public health interventions and environmental regulations.

5) Assign a tier on the basis of scientific validity, public health relevance, public concern, feasibility, public health capacity (resource needs), and the degree to which public health action can reduce exposures.

II. Description of the Environmental Public Health Indicators Project

Workgroups and Tasks
1) CDC/NCEH Workgroup
   • Developed a conceptual framework and definitions.
   • Determined the attributes of an ideal indicator.
   • Established criteria to nominate, select, and rank indicators.
   • Collaborated with the CSTE to create a steering committee.
   • Staffed the steering committee and external workgroups.

2) CDC/CSTE Steering Committee
   • Nominated environmental public health indicators.
   • Offered an EPHI workshop for state public health epidemiologists.
   • Recruited members for workgroups.

3) CDC/CSTE Workgroups
   • Agreed upon a list of environmental public health topics and indicators.
   • Identified measures and potential data sources for indicators.
   • Determined tiers of the indicators and their measures.
III. Using Environmental Public Health Indicators for Surveillance

The environmental public health indicators (EPHI) framework was designed to be need-based to assist the states in meeting Healthy People 2010 objectives and provides a foundation for developing environmental public health surveillance (EPHS) (i.e., environmental public health tracking). The indicators are general to allow states flexibility to choose specific measures on the basis of individual needs and priorities. Measures for any given indicator can change over time as technologies improve and epidemiologic studies enhance understanding of the relation between environmental factors and human health. Indicator-based surveillance, especially if conducted across many states, will help guide this epidemiologic research by providing adequate information for hypothesis generation.

The application of the EPHI framework can guide development of surveillance activities in a way that connects indicators to one another and to those used by other states. This framework of indicators drives data collection, but data collection also can drive the selection and use of indicators by a particular state. The indicators may be used for decision-making, policy-making, or program development. Using the EPHI framework may help connect state health departments across the nation so that EPHS programs do not continue to develop around a particular hazard or disease, but rather in a more comprehensive manner.

Using the EPHI framework
1) Select indicator topic(s) relevant to your state.
2) Within the selected topic(s), choose relevant indicators.
3) For each indicator selected, identify the measure(s) of interest.
4) For core indicators and measures, use the standard definitions and measurement criteria identified in the technical supplement. If your state uses different standards or criteria, or none are identified in the technical supplement, identify the standards and criteria used or proposed by your state.
5) Identify data sources from which data are used.
   a) Evaluate the usefulness of the identified data sources.
   b) Identify required data elements.
   c) When connecting data for hazards, exposures, health outcomes, and interventions, identify areas in which standards and specifications for automating differ from those provided by the National Electronic Data Surveillance System (NEDSS). If yours is a new system, develop standards and specifications that are consistent with NEDSS.
   d) Identify data or surveillance systems that need to be stored or made available electronically.
   e) Identify data sources that are useful to public health but restricted from use.
6) Identify additional data collection needs for bridging data gaps for the selected indicators. If the suggested measures are not useful, recommend alternative measures.
7) Summarize data collected for the selected measures to describe the state of environmental public health in your state.
   a) Identify and rank the hazards, exposures, and health effects by level of concern.
   b) Determine whether the data answer questions about the usefulness of public health programs and interventions.
   c) If multiple years of data are available, evaluate trends among selected measures.
IV. Summary of Core Environmental Public Health Indicators

<table>
<thead>
<tr>
<th>Topics</th>
<th>Lead (Pb)</th>
<th>Sun and Ultraviolet Light</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air, Ambient (Outdoor)</td>
<td>Noise</td>
<td>Toxics and Waste</td>
</tr>
<tr>
<td>Air, Indoor</td>
<td>Pesticides</td>
<td>Water, Ambient</td>
</tr>
<tr>
<td>Disasters</td>
<td>Sentinel Events</td>
<td>Water, Drinking</td>
</tr>
</tbody>
</table>

**Hazard Indicators (potential for exposure to contaminants or hazardous conditions)**
- Criteria pollutants in ambient air
- Hazardous or toxic substances released in ambient air
- Residence in non-attainment areas (for criteria air pollutants)
- Motor vehicle emissions
- Tobacco smoke in homes with children
- Residence in a flood plain
- Pesticide use and patterns of use
- Residual pesticide or toxic contaminants in foods
- Ultraviolet light
- Chemical spills
- Monitored contaminants in ambient and drinking water
- Point-source discharges into ambient water
- Contaminants in shellfish and sport and commercial fish

**Exposure Indicator (biomarkers of exposure)**
- Blood lead level (in children)

**Health Effect Indicators (occurrence of morbidity or mortality attributed to exposure)**
- Carbon monoxide poisoning
- Deaths attributed to extremes in ambient temperature
- Lead poisoning (in children)
- Noise-induced hearing loss (non-occupational)
- Pesticide-related poisoning and illness
- Illness or condition with suspected or confirmed environmental contribution (a case or an unusual pattern)
- Melanoma
- Possible child poisoning (resulting in consultation or emergency department visit)
- Outbreaks attributed to fish and shellfish
- Outbreaks attributed to ambient or drinking water contaminants

**Intervention Indicators (programs or official policies addressing environmental hazards)**
- Programs that address motor vehicle emissions
- Alternate fuel use in registered motor vehicles
- Availability of mass transit
- Policies that address indoor air hazards in schools
- Laws pertaining to smoke-free indoor air
- Indoor air inspections
- Emergency preparedness, response, and mitigation training programs, plans, and protocols
- Compliance with pesticide application standards (among pesticide workers)
- Activity restrictions in ambient water (health-based)
- Implementation of sanitary surveys
- Compliance with operation and maintenance standards for drinking water systems
- Boil-water advisories

VII. Potential Sources of Data and Information for Environmental Public Health Indicators

Federal agencies

Agency for Toxic Substances and Disease Registry (ATSDR)
http://www.atsdr.cdc.gov/

Hazardous Substances Emergency Events Surveillance (HSEES) system: Provides information about releases of hazardous substances that need to be cleaned up or neutralized according to federal, state, or local law, as well as threatened releases that result in a public health action such as an evacuation.
http://www.atsdr.cdc.gov/HS/HSEES/

Centers for Disease Control and Prevention (CDC)
http://www.cdc.gov/

Behavioral Risk Factor Surveillance System (BRFSS): Tracks health risk through use of telephone surveys.
http://www.cdc.gov/brfss

FoodNet: Provides a network for active surveillance of foodborne diseases and related epidemiologic studies.
http://www.cdc.gov/foodnet/

Metropolitan Atlanta Congenital Defects Program (MACDP): Monitors all major birth defects in metropolitan Atlanta, Georgia, and serves as the model for many state-based programs and as a resource for the development of uniform methods and approaches to birth defects surveillance.
http://www.cdc.gov/ncbddd/bd/bdsurv.htm

http://www.nbdpn.org/

National Program of Cancer Registries (NPCR): Establishes standards, model laws and regulations, computerized reporting and data processing systems; trains registry personnel; provides support for cancer prevention and control programs.
http://www.cdc.gov/cancer/npcr/

http://www.cdc.gov/nchs/nvss.htm

PulseNet: Provides a national network of public health laboratories that perform a DNA "fingerprinting" method on foodborne bacteria for disease surveillance.
http://www.cdc.gov/pulsenet/
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

Centers for Disease Control and Prevention (CDC), continued

**Registry of Toxic Effects of Chemical Substances (RTECS®):** Contains information about the toxic effects of chemical substances, including drugs, food additives, preservatives, ores, pesticides, dyes, detergents, lubricants, soaps, plastics, extracts from plant and animal sources, plants or animals that are toxic by contact or ingestion, and industrial intermediates and waste products from production processes.
http://www.cdc.gov/niosh/rtecs.html

**State Tobacco Activities Tracking and Evaluation (STATE):** Summarizes data on tobacco use prevention and control.
http://apps.nccd.cdc.gov/statesystem/

**Youth Risk Behavior Surveillance System (YRBSS):** Tracks risky behaviors among youth.
http://www.cdc.gov/nccdphp/dash/yrbs/index.htm

**Department of Commerce (DOC)**
http://www.commerce.gov/

**Census Bureau:** Provides data about population, geography, and economics.
http://www.census.gov/

**National Technical Information Service:** Links to scientific and technical resources.
http://www.scitechresources.gov/

**Department of Defense (DOD)**
http://www.dod.gov/

**Recruiting Offices:** Links to the DOD recruiting sites.
http://www.dod.gov/sites/r.html

**Department of Energy (DOE)**
http://www.energy.gov

**Energy Information Administration (EIA):** Cites statistics by geography, sector, price, fuel, environment, forecast, and analyses.
http://www.eia.doe.gov/

**Energy Data and Prices:** Contains index of state, international, and national data on energy.
http://www.energy.gov/engine/content.do?BT_CODE=PRICESTRENDS

Source: Environmental Public Health Indicators Project; CDC, NCEH, EHHE; January 2006
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

Department of Transportation (DOT), Federal Highway Administration (FHA)
http://www.fhwa.dot.gov/

Electronic Reading Room: Links to publications, reports, and statistics.
http://www.fhwa.dot.gov/pubstats.html

Nationwide Personal Transportation Survey (NPTS): Catalogs daily personal travel in the United States.
http://www.fhwa.dot.gov/ohim/nptspage.htm

Environmental Protection Agency (EPA)
http://www.epa.gov/

EPA—Air

Aerometric Information Retrieval System (AIRS): Contains information about ambient air pollution.
http://www.epa.gov/ttn/airs/

Air Data: Provides an index of air-related topics.
http://www.epa.gov/air/data/index.html

Air Facility System (AFS): Contains information about ambient air pollution.
http://www.epa.gov/Compliance/data/systems/air/afssystem.html

AIR NOW: Provides air quality maps and ozone forecasts, publications, and consumer tips for reducing air pollution.
http://www.epa.gov/airnow/

Air Toxics: Contains information about air toxics regulations, assessments, programs, education, and partnerships.
http://www.epa.gov/ttn/atw/

Compliance Monitoring Data for Air: Provides information about three databases that contain compliance and permit data for regulated stationary sources; stores and tracks compliance information about owners and operators of asbestos demolition and renovation activities and memoranda issued by EPA on applicability and compliance issues associated with the New Source Performance Standards, National Emissions Standards for Hazardous Air Pollutants, and chlorofluorocarbons.
http://www.epa.gov/compliance/monitoring/index.html

Information Clearinghouse: Contains information about indoor air quality.
http://www.epa.gov/iaq/iaqinfo.html

Source: Environmental Public Health Indicators Project; CDC, NCEH, EHHE; January 2006
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

EPA—Air, continued

**National Air Quality and Emissions Trends Report:** Contains information about criteria air pollutants.
http://www.epa.gov/ttn/chieftrends/

**National Emissions Inventory (NEI):** Characterizes emissions of criteria and hazardous air pollutants.
http://www.epa.gov/air/data/neidb.html

**National Morbidity, Mortality, and Air Pollution Study (NMMAPS):** Describes morbidity and mortality associated with air pollution in the United States based on a study conducted by the Health Effects Institute.

**Office of Air and Radiation (OAR):** Lists publications and reports about ambient air.
http://www.epa.gov/oar/oarpubs.html

**Urban Air Toxics Program:** Lists air toxics, source categories, and integrated strategies for reduction.
http://www.epa.gov/ttn/atw/urban/urbanpg.html

EPA—Miscellaneous

**Compliance Monitoring Data:** Provides access to data for air, hazardous waste, pesticides, toxics, and water.
http://www.epa.gov/compliance/monitoring/index.html

**Databases and Software:** Contains information about air, toxic substances, pesticides, solid waste, water, and “integrated media” (the relation between multiple environmental problems).
http://www.epa.gov/epahome/dmedia.htm

**Library Network:** Provides access to Agency decisions and environmental topics of interest through online publications and services for the public.
http://www.epa.gov/natlibra

**Environmental Monitoring for Public Access and Community Tracking (EMPACT):** Indexes real-time environmental information for U.S. cities.
http://www.epa.gov/empact/index.htm

**Global Warming:** Provides information about global warming impacts by state.
http://www.epa.gov/globalwarming/index.html
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

EPA—Toxics

Compliance Monitoring Data for Toxics and Pesticides: Provides access to systems that track the amount of pesticides produced and compliance and enforcement activities.

Integrated Risk Information System (IRIS): Contains information about health hazards posed by approximately 5,000 substances.
http://www.epa.gov/iris/

Office of Pesticide Programs, Health Effects Division: Registers and reviews environmental and human health information about pesticides.
http://www.epa.gov/pesticides/about/aboutus.htm

Toxic Release Inventory/Emergency Planning and Community Right-To-Know Act (TRI/EPCRA): Lists approximately 600 designated chemicals that threaten human health and the environment. Authorized under EPCRA (1986), this system requires manufacturers to report releases of these chemicals to EPA and state governments.
http://www.epa.gov/tri/

EPA—Water

Beaches Environmental Assessment and Coastal Health (BEACH) Program: Focuses on improving public health and environmental protection programs for beachgoers and providing the public with information about the quality of beach water.
http://www.epa.gov/ost/beaches/2000/

Clean Water Act: Establishes the basic structure for regulating discharges of pollutants into U.S. waters.
http://www.epa.gov/r5water/cwa.htm

Compliance Monitoring Data for Water: Provides access to two information systems: the Permit Compliance System and the Safe Drinking Water Information System.
http://www.epa.gov/compliance/monitoring/programs/cwa/index.html

Environmental Information Management System: Provides access to the data used to develop national maps for watershed indicators.
http://oaspub.epa.gov/eims/eimsstart

Source: Environmental Public Health Indicators Project; CDC, NCEH, EHHE; January 2006
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

EPA—Water, continued

**National Drinking Water Contaminant Occurrence Database:** Contains occurrence data from both Public Water Systems and other sources on physical, chemical, microbial and radiological contaminants.
http://www.epa.gov/ncod/

**Office of Wetlands, Oceans, and Watersheds:** Describes program information and introduces other relevant websites for statutes, publications, resource protection, maps, databases, and other topics.
http://www.epa.gov/owow/

**Safe Drinking Water Act:** Sets drinking water quality standards and oversees the states, localities, and water suppliers who implement those standards.
http://www.epa.gov/safewater/sdwa/sdwa.html

**Safe Drinking Water Information System (SDWIS):** Stores information needed to monitor U.S. public drinking water systems.
http://www.epa.gov/safewater/sdwisfed/sdwis.htm

**Urban, Great Waters, and Regional Programs:** Describes programs that characterize risks to human health and the environment from mercury, urban air toxics, and air pollution deposition in the Great Lakes.
http://www.epa.gov/ttn/atw/riskinit.html

**Water Data and Maps:** Includes information about data systems, databases, mapping, and water quality models.
http://www.epa.gov/owow/data.html

**Water Science:** Includes information about water quality criteria and standards, industrial water pollution controls, water quality tools, health advisories, training, guidance, and financial assistance.
http://www.epa.gov/OST/

**Watershed Information Network:** Catalogs geo-spatial displays and analyses of information important for watershed protection and restoration.
http://www.epa.gov/win/

**Watershed Indicators Index:** Provides a general overview of watershed indicators.
http://www.epa.gov/iwi/iwi-overview.pdf

**Watershed Information Network:** Provides national maps and fact sheets for all watershed indicators and candidate indicators through the Watershed Atlas.
http://www.epa.gov/win/
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

Food and Drug Administration (FDA)
http://www.fda.gov/

   Total Diet Study (TDS): Measures dietary intake of food contaminants—such as pesticide residues, industrial chemicals, toxics, and radionuclides—and nutritional elements and vitamins.
   http://www.cfsan.fda.gov/~comm/tds-toc.html

Federal Emergency Management Agency (FEMA)
http://www.fema.gov/

   Environmental Program: Integrates resource considerations into disaster preparedness, mitigation, response, and recovery.

   Flood Hazard Mapping: Outlines specifications and procedures.
   http://www.floodmaps.fema.gov/fhm/tdsindex.shtm

   Mapping Sources and Data: Provides information about flood hazards and mapping resources.

   Miscellaneous Information: Links to sources for funding, related federal and state agencies, and legislation and laws.

Housing and Urban Development (HUD)
http://www.hud.gov/

   Library: Contains an index of topics, including information about disaster relief, community environmental issues, and hazards from lead.

   Data and Publications: Catalogs reports, publications, periodicals, and housing data.
   http://www.hud.gov/library/bookshelf03/index.cfm

National Aeronautics and Space Administration (NASA)
http://www.nasa.gov/

   Global Change Master Directory: Provides a directory of earth science data on agriculture, atmosphere, land surface, human dimensions, oceans, and other topics.
   http://globalchange.nasa.gov/
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

National Institute of Environmental Health Sciences (NIEHS)
http://www.niehs.nih.gov/

   National Toxicology Program: Links to information, fact sheets, and health and safety information.
   http://ntp-server.niehs.nih.gov/

National Library of Medicine (NLM)
http://www.nlm.nih.gov/

   TOXLINE: Contains a collection of online information about drugs and other chemicals.

National Oceanic and Atmospheric Administration (NOAA)
http://www.noaa.gov/

   National Environmental Satellite, Data, and Information Service (NESDIS): Provides information services and access to global environmental data from satellites and other sources and conducts research to promote, protect, and enhance the nation's economy, security, environment, and quality of life.
   http://www.nesdis.noaa.gov/

   National Weather Service (NWS): Provides access to weather data, forecasts, and warnings.
   http://www.nws.noaa.gov/

   National Climatic Data Centers (NCDC): Maintains an active archive of weather data, responds to data requests, and produces climate publications.
   http://lwf.ncdc.noaa.gov/oa/ncdc.html

   National Severe Storms Laboratory (NSSL): Investigates all aspects of severe weather and conducts research to improve severe weather warnings and forecasts.
   http://www.nssl.noaa.gov/

Occupational Safety and Health Administration (OSHA)
http://www.osha.gov/

   Statistics and Data: Provides access to inspection data, federal statistics, and the Bureau of Labor’s statistics on workplace injuries, illnesses, and fatalities.
   http://www.osha.gov/oshstats/index.html
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

United States Department of Agriculture (USDA)
http://www.usda.gov/

- **Economics and Statistics System:** Contains information about food, land, water, conservation, and other topics.
  http://usda.mannlib.cornell.edu/

- **National Agricultural Statistics Service (NASS):** Links to state and federal publications and data.
  http://www.usda.gov/nass/

- **Pesticide Data Program (PDP):** Collects data on pesticide residues in food.

United States Geological Survey (USGS)
http://www.usgs.gov/

- **Environment and Human Health:** Links to reports, publications, data, and fact sheets.

- **National Stream Quality Accounting Network (NASQAN):** Contains monitoring data from large U.S. rivers.
  http://water.usgs.gov/nasqan/

- **National Water Quality Assessment Program (NAWQA):** Provides data about water chemistry, hydrology, land use, stream habitat, and aquatic life for major river basins and aquifers.
  http://water.usgs.gov/nawqa/

- **NAWQA Pesticide National Synthesis Project:** Produces a long-term assessment of the status of and trends in the quality of the nation's water resources.
  http://water.wr.usgs.gov/pnsp/

- **Toxic Substances Hydrology Program:** Provides bibliographies and publications about toxic substances in agriculture and mining.
  http://toxics.usgs.gov/index.html

- **Water Resources Data:** Links to water data, publications, technical resources, programs, and local information.
  http://water.usgs.gov/

Source: Environmental Public Health Indicators Project; CDC, NCEH, EHHE; January 2006
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

*States and local jurisdictions*

*Note:* States’ data collection and reporting methods may differ, and some data may be collected but not reported.

**Departments of Agriculture:** Provides access to local services provided by the Farm Service Agency, Natural Resources Conservation Service, and Rural Development agencies and may provide information about land management practices, pesticides, pesticide alternatives, and water quality.

http://www.usda.gov/wps/portal/?ut/p/_s.7_0_A/7_0_1OB?navtype=MA&navid=AGENCIES_OF_FICES

**Environmental Protection and Natural Resources Agencies:** Contains information about how state environmental agencies are organized and provides links to each state.

http://www.sso.org/ecos/states.htm

**Medical Examiner and Coroner (ME/C) Offices:** Provides contacts for each state and information about types of deaths investigated. Individual ME/C offices may provide information about specific deaths, including investigation, autopsy, and toxicology reports.

http://www.cdc.gov/epo/dphsi/mecisp/index.htm

**Public Health Departments:** Provides links to state health departments (scroll past birth data section).

http://www.cdc.gov/nchs/about/major/natality/sites.htm

**Public Health Laboratories:** Provides links to most state public health labs.

http://www.aphl.org/about_aphl/state_laboratory_listing.cfm

**United States Geological Survey District Offices:** Provides links to state offices.

http://www.usgs.gov/major_sites.html

**Universities**

**Environment Databases:** Provides access to a wide variety of online resources.

http://www.ulib.iupui.edu/subjectareas/gov/dbenviro.html

**Environment, Health, and Other Government Statistical Documents:** Provides a central reference and referral point for government information, political science, statistical data, and news.

http://www.lib.umich.edu/govdocs/stats.html
VII. Potential Sources of Data and Information for Environmental Public Health Indicators

Non-government organizations

American Legacy Foundation: Provides data about tobacco use and information about tobacco control programs.
http://www.americanlegacy.org/

American Waterworks Association: Provides information about local drinking water issues.
http://www.awwa.org/

North American Association of Central Cancer Registries: Provides links to standards and technical assistance documents as well as to cancer incidence data.
http://www.naaccr.org/
