

Web table A. Results of laboratory testing of passengers in the rear section of the aircraft following their arrival in New Zealand showing the number of tests and proportion positive for pandemic A/H1N1 infection

Laboratory investigation	School group		Other passengers		Total	
	+ve / No.	%+ve	+ve / No.	%+ve	+ve / No.	%+ve
Throat swab only ¹	0	na	2/26	7.7	2/26	7.7
Serology only	5/11	45.7	0	na	5/12	45.5
Throat swab and serology ²	8/11	72.7	0	na	8/11	72.7
Investigation not performed or incomplete ³	2	na	76	na	78	na
Total	13/24	54.2	2/102	2.0	15/126	11.9

¹ Individuals were only considered to have had a throat swab if it was *fully assessed*, ie, typing was performed on any influenza A virus identified.

² Included 7 cases where throat swab and serology was in agreement and one member of the school group who was throat swab positive for influenza H1N1 but serology negative and asymptomatic

³ The group of passengers with investigation not performed or incomplete included 5 passengers without follow up, 66 passengers who were asymptomatic, 3 with ILI symptoms not meeting the ILI case definition, and 4 who had ILI meeting the case definition (suspect cases).
