

# CDC is preventing violence in New Jersey communities

Violence is one of the leading causes of death in the US. CDC has been the leading federal agency focused on preventing injury and violence for over 40 years.

## Violence is preventable. It's scientifically proven.

When traumatic events happen to children—such as experiencing abuse or neglect, living in a home with substance misuse, or witnessing community violence—these adverse childhood experiences, or ACEs, can cause lasting, negative effects on health including an increased risk of experiencing or perpetrating violence later in life. CDC is uniquely positioned to help communities across the country prevent ACEs and other forms of violence, to ensure that all people are safe, healthy, and thriving.

**In 2024, New Jersey received \$2,277,245 from CDC to prevent violence before it happens.** CDC funds states and communities to use data to implement proven prevention approaches with the greatest potential to reduce violence. CDC scientists provide data analysis, the latest research findings and additional expertise to support state and local health departments, community organizations, and others working to prevent violence. Their efforts help save lives and improve community safety and well-being.

## Violence prevention is critical for New Jersey

Violence doesn't only affect victims and their families in the immediate term—it has long-term effects on their surrounding communities. Violence can lead to physical and mental illness, chronic diseases, fewer employment opportunities, childhood developmental delays, and premature deaths. Violence can discourage people from participating in neighborhood activities, limit business growth and prosperity, strain education, justice, and medical systems, and slow community progress.

### Example Prevention Approaches

- Safe routes to and from school
- Home visitation programs to support new mothers
- Mentoring and afterschool programs
- Job training programs
- Cleaning and maintaining vacant lots
- Programs in hospitals that provide social and job support to victims to prevent future violence

## Violence in New Jersey, by the numbers

**293**

homicides  
in 2023

**12%**

of adults have  
experienced four or  
more ACEs in their  
lifetimes

**20%**

of women have  
experienced rape  
or survived rape  
attempts in their  
lifetimes

# CDC funded violence prevention programs in New Jersey

CDC has been researching violence for over 40 years—building, implementing, and evaluating programs designed to reduce and prevent violence for entire populations.

Programs with a check mark below are active in New Jersey and are using the best available evidence to inform prevention in the state. Programs without a check mark are other CDC programs that New Jersey can apply for in the future.

### **National Violent Death Reporting System**

is CDC's flagship state-based data system that links up to 700 unique data elements about the "who, when, where, and how" of violent deaths and suicides and provides insights about "why" they occurred to inform prevention activities.

### **Rape Prevention and Education Program**

funds sexual violence prevention approaches such as bystander programs, anti-bullying, and anti-sexual harassment policies in all 50 states, Washington, D.C., Puerto Rico, and the U.S. Virgin Islands.

**DELTA** funds state domestic violence coalitions to prevent intimate partner violence by engaging in statewide prevention efforts and providing training, technical assistance, and financial support to local community organizations.

**Essentials for Childhood: Preventing Adverse Childhood Experiences through Data to Action** supports states and communities to prevent ACEs by improving data collection to help put in place the best programs for their area.

**PREVAYL** recipients implement proven strategies that prevent youth violence, teen dating violence, and ACEs in communities with high violence rates.

**National Centers of Excellence in Youth Violence Prevention** connect community leaders with research universities to create and study lasting youth violence prevention methods, such as programs that reduce rates of violence through bystander reporting, social media monitoring, and youth involvement in activities to improve community parks, vacant lots, and public spaces.

**FASTER: AVERT** provides near real-time data from emergency department visits for a range of violence-related injuries and mental health conditions to inform community-level prevention of violence and suicide.

**Rigorously Evaluating Approaches to Prevent Adult-Perpetrated Child Sex Abuse** recipients conduct research to learn what prevents child sexual abuse and sex trafficking, by rigorously evaluating different programs, policies, and practices.

## CDC Supports New Jersey

CDC's Essentials for Childhood: Preventing Adverse Childhood Experiences through Data to Action funding supported the Center for Health Care Strategies in New Jersey to collect data on ACEs to inform the best approaches to prevention. Prior to this funding, there was no statewide data on ACEs collected among youth. Center for Health Care Strategies formed a data leadership team that included community members to help interpret the data. Using this data as a guide, they implemented several activities to prevent ACEs and promote positive childhood experiences in communities with high prevalence of ACEs. For example, they worked with community-based organizations, parents, and other leaders, to implement a public education campaign to support parents. The campaign included evidence-based trainings to prevent ACEs and community conversations, which were protected spaces for parents to share positive discipline techniques and other parenting skills.
