Non-U.S. Residents	—	—	—	—	—	—	—
Total	438	33	44	260	101	1,739	438

—: No reported cases — The reporting jurisdiction did not submit any cases to CDC.

N: Not reportable — The disease or condition was not reportable by law, statute, or regulation in the reporting jurisdiction.

U: Unavailable — The data are unavailable.

* Cases are assigned to the reporting jurisdiction submitting the case to NNDSS if the case's country of usual residence is the United States, a U.S. territory, unknown, or country is not reported; otherwise, the case is assigned to the Non-U.S. Residents' category. Country of usual residence is currently not reported by all jurisdictions or for all conditions because this data element is only available in the HL7 generic version 2 and disease-specific message mapping guides. If a jurisdiction sends data in legacy formats, they are not able to send this information. For further information on interpretation of these data, see the [Guide to Interpreting Provisional and Finalized NNDSS Data](#).

Notes:

1. These are **annual** cases of selected infectious national notifiable diseases from the National Notifiable Diseases Surveillance System (NNDSS). NNDSS data reported by the 50 states, New York City, the District of Columbia, and the U.S. territories are collated and published. Cases are reported by state health departments to CDC weekly. Because source datasets may be updated as additional information is received, statistics in publications based on that source data may differ from what is presented in these tables. Source datasets for the 2023 annual tables were officially closed on November 7, 2024.

2. The list of national notifiable infectious diseases and conditions for 2023 and their national surveillance case definitions are available by navigating to the [Surveillance Case Definitions | CDC](#) web page, selecting "2023" for the notifiable condition list year, checking "Infectious" conditions, and clicking "Get Notifiable List by Year". Publication criteria for the finalized 2023 data are available at <https://www.cdc.gov/nndss/infectious-disease/notice-to-data-users.html>. See also [Guide to Interpreting Provisional and Finalized NNDSS Data](#).

3. Population estimates for incidence rates are July 1st, 2023 postcensal estimates of the resident population of the United States for July 1, 2020, to July 1, 2023, by year, county

sub-population required to align with the defined age restriction criteria)

Perinatal hepatitis C infection (age restriction in numerator is ≤ 36 months; however, rates will not be calculated due to population estimates not being available for the specific sub-population required to align with the defined age restriction criteria).

Data for congenital syphilis are aggregated by the infant's year of birth. The rate for congenital syphilis is based upon the number of reported cases per 100,000 live births, using natality data for 2023 (National Center for Health Statistics [Natality 2023](#), as compiled from data provided by the Vital Statistics Cooperative Program). Congenital syphilis cases are usually assigned to the mother's state of residence at the time of delivery. The mother's race and ethnicity are used for race- and ethnicity-specific rates of congenital syphilis cases.

8. Surveillance data reported by other CDC programs might vary from data reported in these tables because of differences in 1) the date used to aggregate the data, 2) the timing of reports, 3) the source of the data, 4) surveillance case definitions, and 5) policies regarding case jurisdiction (i.e., which jurisdiction should submit the case notification to CDC).
