

**SUPPLEMENTARY FIGURE. Outcomes of referral requests\* for patients with laboratory-confirmed tuberculosis disease<sup>†</sup> who were relocating internationally to or from the United States (N = 2,404) — CureTB, 2016–2023**

\* Courtesy notifications were sent for 141 patients for whom the CureTB process was not completed because locating information was insufficient.

<sup>†</sup> Referrals for confirmed TB disease represented 35% of 6,944 total referrals to CureTB. Percentages of those referred to other countries or U.S. destinations, those for whom a referral was not required, and those for whom a courtesy referral was sent are calculated based on the 2,404 laboratory-confirmed cases. All other percentages are calculated based on the 1,741 referrals to other countries or U.S. destinations.
