

SUPPLEMENTARY FIGURE. SARS-CoV-2 variant proportion estimates for JN.1 lineages by month — National SARS-CoV-2 Genomic Surveillance, United States, June 8, 2024–July 5, 2025

As of August 29, 2025.

* LF.7 includes LF.7, LF.7.2.1, LF7.7.1, LF7.7.2, and LF.7.9.

† “Other” represents aggregated lineages circulating at <1% prevalence nationally during all 4-week periods displayed.

Lineages were ordered by date of first appearance for CDC’s variant proportions estimates (<https://www.cdc.gov/covid/php/variants/variants-and-genomic-surveillance.html>). Lineages with identical spike protein residue 31 and receptor binding domain amino acid sequences (residues 332 to 527) were grouped with a representative lineage and denoted as “representative lineage-like.”
