

SUPPLEMENTARY FIGURE. Most frequent locations of exposure among U.S. residents with travel-associated dengue (N = 2,756) — U.S. states and District of Columbia, 2024\*

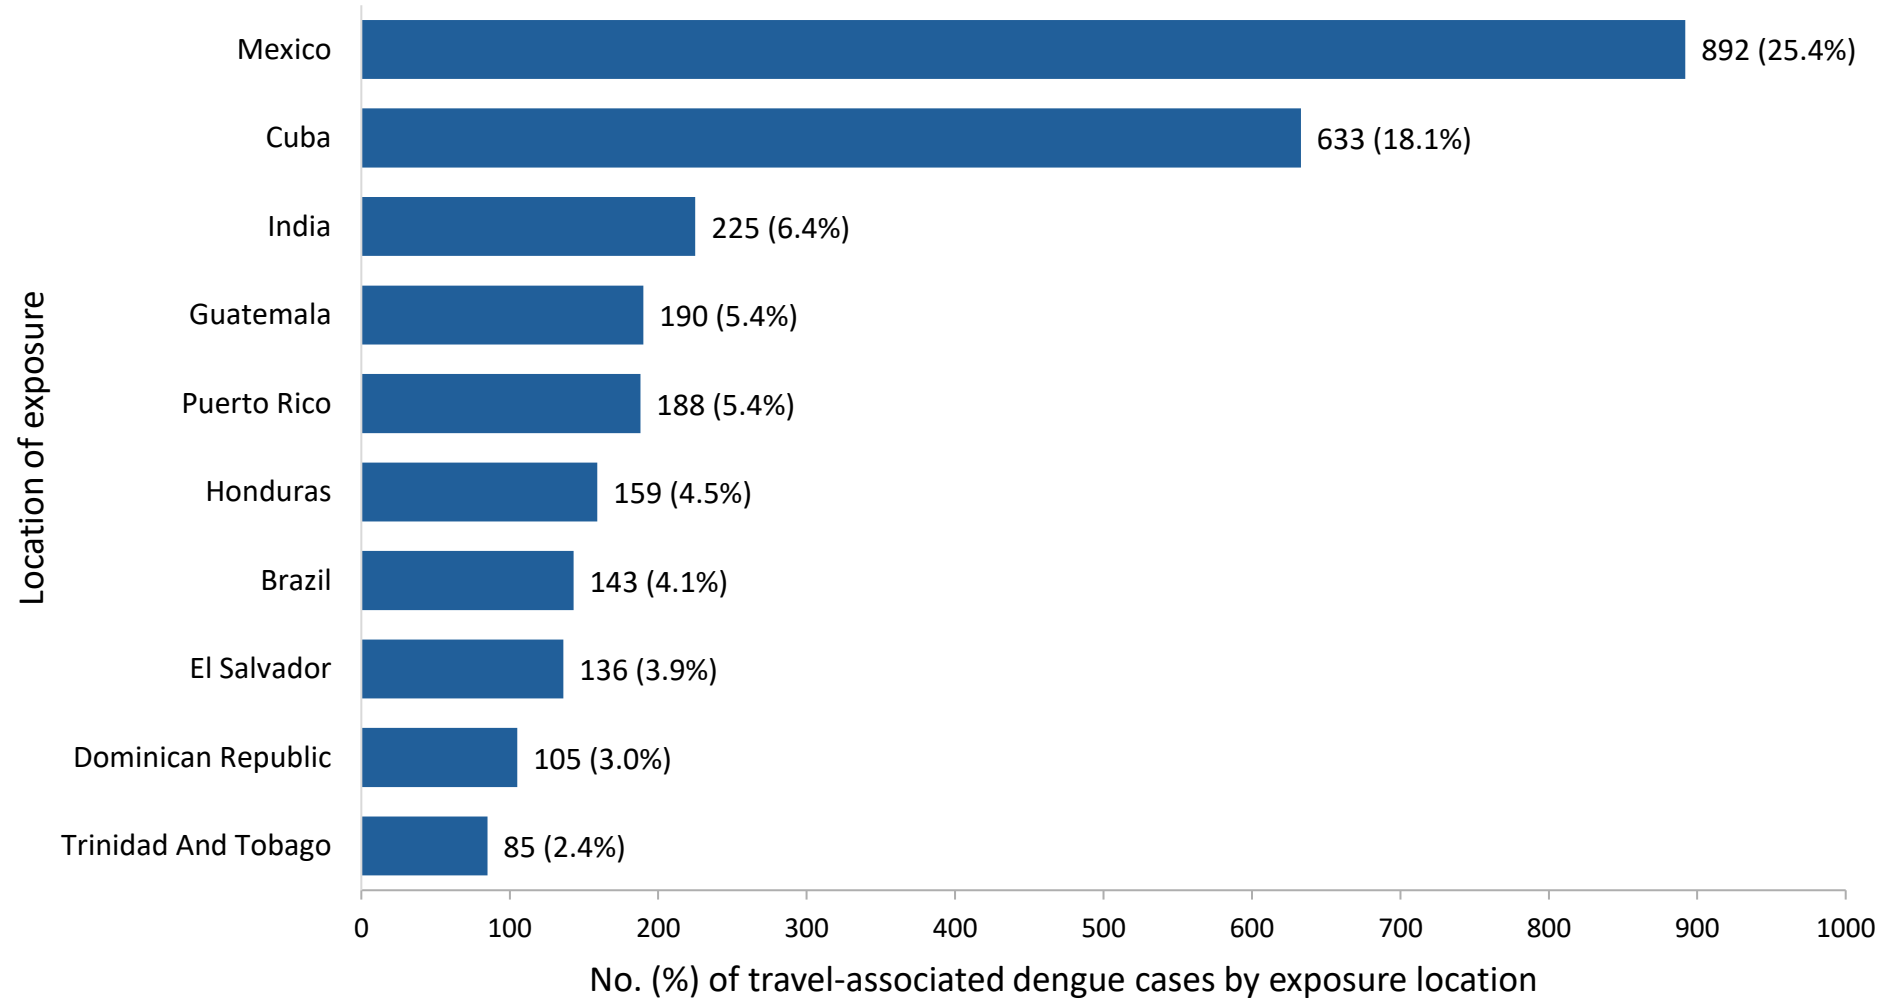

Figure includes the 10 most frequent exposure locations among travel-associated dengue cases with known exposure location (n = 2,756 of 3,505; 78.6%). Percentages are calculated among cases with known exposure location. Additional cases with known exposure location not among the top 10 and cases with missing or unknown exposure location are not shown.
