

SUPPLEMENTARY FIGURE 1. Estimates of the effective reproductive number<sup>\*,†</sup> before and after simulated implementation of isolation of persons with Bundibugyo virus disease, 2026

\* 500 simulations assuming 50 cumulative deaths as of May 24, 2026; IQRs shown by error bars

† The effective reproductive number is the average number of onward infections per infectious person, accounting for immunity and public health interventions.
