

Supplemental Figures

Supplement Figure 1

Supplement Figure 1. Hypothetical participants for propensity score matching on Fib-4 score.

Note: A hypothetical case with DAA treatment, HCV infection, repeated Fib-4 measurement is illustrated in the upper panel above the horizontal axis. Vertical bars represent date of longitudinal Fib-4 measurements; HCV-Dx represents time of confirmatory diagnosis of HCV infection; DAA-Rx represents DAA prescription date; Fib-4@Rx is the date with Fib-4 score closest to DAA prescription date. A hypothetical control with pseudo DAA prescription, HCV infection, repeated Fib-4 measurement, and matched Fib-4 score date is illustrated in the lower panel below the horizontal axis. Fib-4 Matched represent pseudo DAA prescription date for the DAA-naïve case when Fib-4 score is closest to that of the DAA-treated case at DAA prescription.
