

Kleymann A, Karaaslan E, Scholte FEM, Sorvillo TE, Welch SR, Bergeron É, Elser S, Almanzar-Jordan MR, Velazquez E, Genzer SC, Jean SM, Spiropoulou CF, Spengler JR. Crimean-Congo hemorrhagic fever virus replicon particle vaccine is safe and elicits functional, non-neutralizing anti-nucleoprotein antibodies and T cell activation in rhesus macaques. doi: 10.1016/j.antiviral.2024.106045.

Supplemental Fig. 1. Plasma cytokine and chemokine analyses from CCHF VRP-vaccinated rhesus macaques. EDTA plasma samples were analyzed from each animal at baseline (day 0) and on days 3, 7, 14, and 21 post vaccination. Circles indicate individual data ($n = 12$), and thick line indicates the group mean. Data are reported as pg/mL.
