Fever that starts quickly

Tiredness

Headache

Pain in the body

Vomiting

Diarrhea

**Unexplained bleeding
or bruising**

Body fluids

spit

sweat

vomit

tears

poo and pee

snot

blood

semen

How Do People Get Ebola?

Ebola is spread by contact with blood or body fluids from a person who is sick or who has died.

Someone who has died

Things a sick person has touched

While You Wait, Give “No Touch Care”

DO choose one person to help the sick person

DO separate the sick person. Give the sick person their own clothes, blankets, eating utensils and waste container

DO pour fluids or put food onto the sick person’s cup or plate without touching, lifting, or moving it

DO keep everyone at least a meter (an arm’s length) away from the sick person

While You Wait, Do Not Touch

DO NOT touch a person who has died. Dial 115 for help

DO NOT touch the sick person's things

DO NOT put pills in the sick person's hand or mouth

DO NOT face the sick person. Stay to the side or behind them

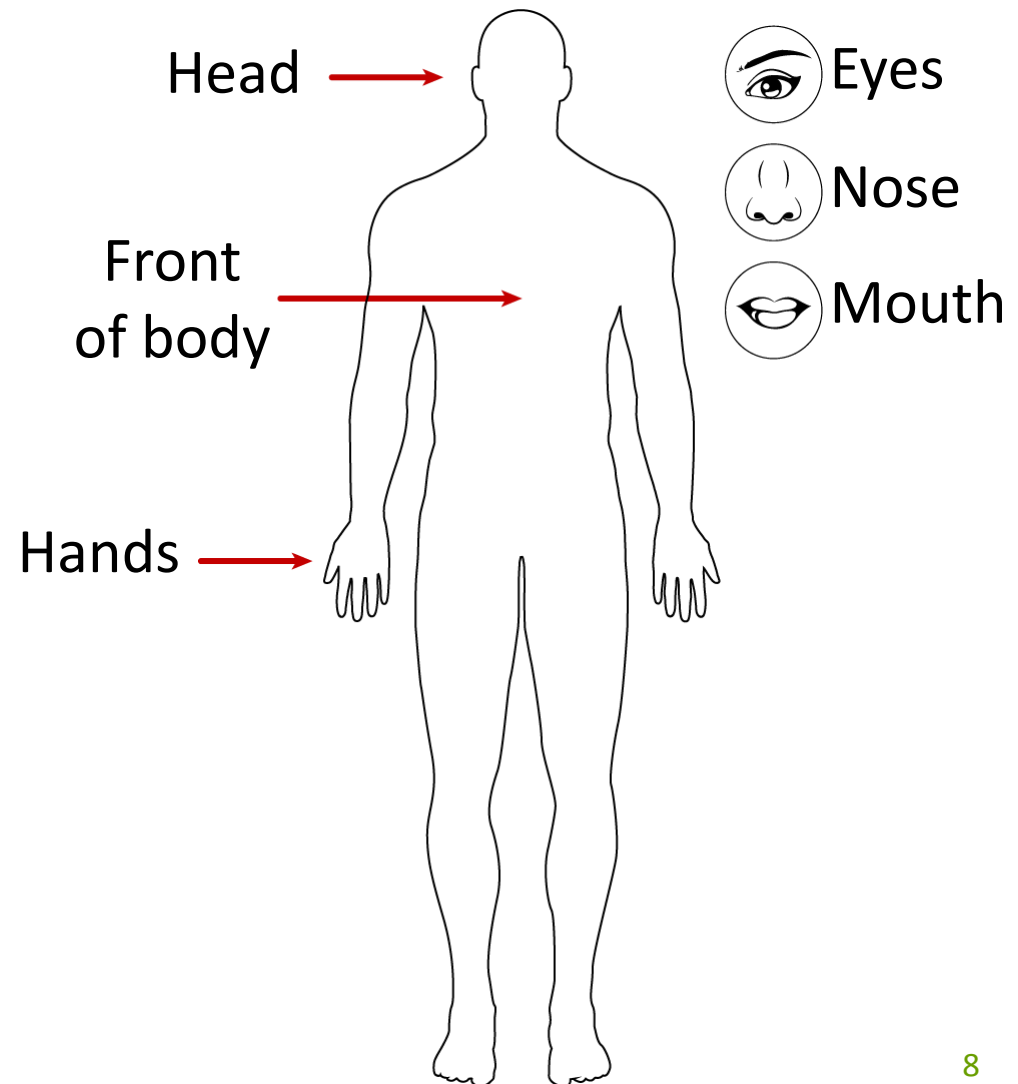

If You Must Touch, Cover Yourself

If you must touch the sick person, their body fluids, or items the sick person has touched, be sure to protect yourself.

- **Important: Always remove and dispose of used gloves. Do not reuse gloves.**

It is important to cover:

How To Wash Your Hands

- Wash your hands with soap and water for 20-30 seconds.
- If soap and water are not available, use hand sanitizer or chlorinated water.
- **If your hands are visibly dirty**, use soap and water to wash your hands for 40-60 seconds (hand sanitizers will not work for this).

Wet hands with water.

Apply enough soap to cover all hand surfaces.

Rub hands together and scrub everywhere.

Wash the front and back of your hands and in between your fingers.

Rinse hands with water.

Dry hands completely using a single use towel or air dry.

Wash Your Hands with Soap and Water

After

Helping a sick person, **before** you leave their area

Touching other people

Before

Preparing ORS

Cooking

Cleaning

Using the latrine

Eating

Giving Oral Rehydration Solution (ORS) Saves Lives

- Give ORS as soon as Ebola symptoms start

- **ORS should be given many times throughout the day and night**

- Give sick people as much ORS as they will drink

- If you need to feed someone ORS, wear gloves and do not touch the sick person or their things
- Stay to the side and do not face the sick person
- If they're small or weak, you might need to feed them the ORS with a spoon
- Sick adults may need 5-12 liters of ORS a day

- Stop ORS if vomiting and diarrhea stop

Making and Storing ORS

Mix 1 ORS sachet with 1 liter of clean water

Pour the ORS into the sick person's cup **without touching** the cup

- Store ORS in a covered container
- Throw away unused ORS at the end of each day

Avoid Cleaning Up After a Sick Person!

Cleaning up after sick people can spread Ebola, even if you try to be careful

Touching a sick person, their things, or their body fluids can spread Ebola

**Call the
decontamination team**

**For help finding a
decontamination team
in your area, CALL 115**

If You Must Clean Up

COVER YOUR SKIN, especially your hands. **Wear gloves if you have them**

Covering your skin will not always protect you from Ebola, but it can help

Use strong (0.5%) **chlorine solution** if you must clean up after a sick person

DO NOT splash or spray. Move slowly

DO NOT wipe surfaces with a dry towel

DO NOT pour directly onto a spill; this can cause splashes

DO NOT reuse towels

DO NOT dip a dirty towel into a bucket of chlorine solution; it will make the chlorine less effective

If You Must Clean Up: How to Clean Body Fluids and Waste

Steps for Cleaning and Disinfecting Body Fluids

1. Cover your skin, especially your hands. Wear gloves if you have them

2. Lay a dry towel over the mess

3. Pour chlorine solution onto the towel.

4. Wipe up the mess with the wet towel

5. Using a **different towel**, disinfect the area with chlorine solution. Wait 15 minutes

6. **Wash covered (gloved) hands with chlorine solution**, then wash bare hands with soap and water

How to get rid of waste

- Leave contaminated material like soiled towels in bags near the sick person
- The decontamination team will remove it
- If you must remove it yourself, burn it
