

This map illustrates the geographic distribution of COVID-19 cases in the United States, categorized by how they were acquired. The legend indicates that light blue represents travel-associated cases and dark blue represents locally-acquired cases. The map shows that while many states have reported both types of cases, there are regional patterns. For instance, states like Washington, Oregon, and California show a higher proportion of travel-associated cases, while states like New York, New Jersey, and Massachusetts show a higher proportion of locally-acquired cases. The insets for Alaska and Hawaii also show a mix of both case types.
