

National childhood vaccination rates remain high, but children still at risk for disease

Knowing the vaccination rates in your community is important.

Unvaccinated people tend to **cluster** and put communities at **risk** for outbreaks of diseases like measles.

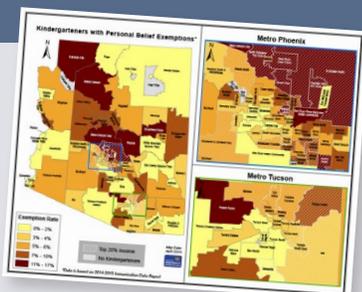

States that report local-level coverage and exemption data online as of 2015.

Many states are making vaccination data available online so you can see local vaccine coverage and vaccine exemption data.

To find out if your state makes this information available, check with your state health department or visit:

www.cdc.gov/vaccines/schoolvaxview-states/

*April 2015, Arizona Department of Health Services

Know the rates in your community and protect your child by vaccinating according to the recommended schedule.
