1. Weighted data means that at least 70% of the principals or lead health education teachers in the sample completed the survey. Weighted data represent the state, large urban school district, or territory. With weighted data, it is possible to say, for example, "X% of schools in our state offer students intramural activities or physical activity clubs."
2. Unweighted data represent only the schools that completed the questionnaire.
3. (--) Indicates that the site was either not funded or elected to not participate.
4. (*) Includes high schools only.
5. Sites that have given CDC permission to distribute their data files to people interested in additional data analyses are represented by "Y". Sites that have not given CDC permission to distribute their data files are represented by "N"; these sites will need to be contacted directly to arrange access to data files. Sites that do not have any years of weighted data are designated by "NA". See [Requesting Data Files](#) for more information.

Note: A site's participation in multiple years of Profiles does not guarantee that trend analyses can be conducted for that site. Trend analyses can only be conducted when a site surveys a consistent population (e.g., regular public schools) each cycle.
