West Virginia	3.0	(1.3-6.8)	—		—	

* Had sexual intercourse with at least one person during the 3 months before the survey.

[†] Highly effective, reversible contraceptive methods or long acting reversible contraception include intrauterine devices (such as Mirena or ParaGard) and implants (such as Implanon or Nexplanon).

[§] Moderately effective contraceptive methods include birth control pills or a shot (such as Depo-Provera), patch (such as OrthoEvra), or birth control ring (such as NuvaRing).

[‡] Less effective contraceptive methods include condoms to prevent pregnancy, withdrawal, or some other method.

** Not available. Fewer than 100 students in this subgroup.
