

EMERGENCY OPERATIONS: WHEN EVERY MINUTE COUNTS

In a public health crisis, we must be ready to respond quickly and to scale. An Emergency Operations Center (EOC) brings highly trained experts together to respond faster, make better decisions, and manage resources effectively.

WHY IT MATTERS

An EOC provides real-time, coordinated response to natural or manmade disasters, disease outbreaks, and other public health emergencies.

PEOPLE

Having people who know what to do, and having the resources in place to allow them to do their jobs, saves lives.

PROCESS

Using a common framework for managing emergencies, such as the CDC Incident Management System (IMS), allows organizations to work seamlessly together. Responders who understand the principles of incident management can “speak the same language” during an event.

PLACE

Bringing decision makers together with the latest information helps them make timely decisions and maintain situational awareness.

Control and Prevention

WHY CDC?

For over 70 years, CDC has attracted the best scientists in the world. In a crisis, we draw on this deep bench of expertise by connecting public health experts with skilled personnel who know how to effectively manage emergencies. This happens in our state-of-the-art Emergency Operations Center, which stays prepared at all times to monitor and respond to developing situations around the world.

To prepare for known (and unknown) public health threats, CDC's emergency management program provides training and conducts exercises to improve its ability to respond rapidly and effectively to potential emergencies, and has dedicated staff monitoring information to help keep Americans safe 24/7.

EMERGENCY OPERATIONS IN ACTION

In the past 10 years, we've responded to infectious diseases from Ebola to polio to fungal meningitis; deadly foodborne outbreaks; devastating earthquakes, hurricanes, and tsunamis; and environmental catastrophes like oil spills and water contamination.

24/7

The CDC EOC is staffed 24 hours a day, 7 days a week, 365 days a year

60

Between September 2001 and June 2016, CDC activated its IMS for 60 responses

90%

The CDC EOC has been activated over 90% of the time in the past 7 years

DURING EMERGENCIES, CDC:

Rapidly deploys scientific experts

Coordinates the delivery of supplies and equipment to the incident site

Monitors response activities

Provides resources to state and local public health departments

Disseminates timely and accurate information
