# Diagnosed HIV Infection among Adults and Adolescents in Metropolitan Statistical Areas-United States and Puerto Rico, 2015 

This issue of the HIV Surveillance Supplemental Report is published by the Division of HIV/AIDS Prevention, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, Centers for Disease Control and Prevention (CDC), U.S. Department of Health and Human Services, Atlanta, Georgia.

Data are presented for diagnoses of HIV infection reported to CDC through December 2016.
The HIV Surveillance Supplemental Report is not copyrighted and may be used and copied without permission. Citation of the source is, however, appreciated.

## Acknowledgments

Publication of this report was made possible with the contributions of the state and territorial health departments and the HIV surveillance programs that provided surveillance data to CDC.
This report was prepared by the following staff and contractors of the Division of HIV/AIDS Prevention, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, CDC: Andre Dailey, Baohua Wu, Hong Zhu, William Adih, Lakeshia Watson, Zanetta Gant, and Michael Friend (desktop publishing).

## Section 4. Diagnosed HIV Infection among Adults and Adolescents, by MSA, Sex, and Transmission Category

6a Diagnoses of HIV infection among adult and adolescent males, by transmission category and metropolitan statistical area of residence, 2015—United States and Puerto Rico

> 6b Adult and adolescent males living with diagnosed HIV infection (prevalence), by transmission category and metropolitan statistical area of residence, year-end 2014United States and Puerto Rico

7a Diagnoses of HIV infection among adult and adolescent females, by transmission category and metropolitan statistical area of residence, 2015—United States and Puerto Rico

7b Adult and adolescent females living with diagnosed HIV infection (prevalence), by transmission category and metropolitan statistical area of residence, year-end 2014United States and Puerto Rico

## Section 5. Diagnosed HIV Infection among Adults and Adolescents, by MSA, Race/Ethnicity, and Transmission Category

8a Diagnoses of HIV infection among black/African American adults and adolescents, by transmission category and metropolitan statistical area of residence, 2015United States

8b Diagnoses of HIV infection among Hispanic/Latino adults and adolescents, by transmission category and metropolitan statistical area of residence, 2015United States

8c Diagnoses of HIV infection among white adults and adolescents, by transmission category and metropolitan statistical area of residence, 2015-United States
9a Black/African American adults and adolescents living with diagnosed HIV infection year-end 2014—United States
9b Hispanic/Latino adults and adolescents living with diagnosed HIV infection (prevalence), by transmission category and metropolitan statistical area of residence, year-end 2014United States
9c White adults and adolescents living with diagnosed HIV infection (prevalence), by transmission category and metropolitan statistical area of residence, year-end 2014United States

## Section 6. Deaths of Adults and Adolescents with Diagnosed HIV Infection, by MSA and Sex

10 Deaths of adults and adolescents with diagnosed HIV infection, by sex and metropolitan statistical area of residence, 2014—United States and Puerto Rico

## Commentary

To best direct resources toward communities with the greatest need, health planners often establish priorities by comparing the magnitude and effect of HIV disease amongst geographic areas. This surveillance supplemental report presents data on diagnoses of HIV infection during 2015 and on persons living with diagnosed HIV infection at year-end 2014 (prevalence) for adults and adolescents (aged 13 years and older) residing in metropolitan statistical areas (MSAs, population of 500,000 or more) in the United States and Puerto Rico. HIV programs may use this information to focus on populations and areas at greatest need for HIV prevention and treatment services, which is consistent with the High-Impact Prevention approach pursued by the Centers for Disease Control and Prevention (CDC).

This report presents numbers and rates (cases diagnosed per 100,000 persons) of diagnosed HIV infection during 2015 and of persons living with diagnosed HIV infection as of December 31, 2014 for adults and adolescents aged 13 years and older. Rankings for HIV diagnoses are based on rates derived from the MSA data.

## Report Changes

This volume of the HIV Surveillance Supplemental Report marks the transition to presenting diagnosis, death, and prevalence data without statistical adjustments for delays in reporting of cases to CDC. CDC periodically assesses the portfolio of the National HIV Surveillance System to determine whether methods and efficiencies in data collection and analysis meet the information needs of the nation. In determining that adjustments for reporting delays were no longer necessary, CDC considered improvements in data quality as a result of the following: availability of additional case information, shorter time for processing duplicates from multiple states, and a better system for national data processing. CDC will continue to statistically adjust transmission category data by using multiple imputation techniques to account for missing transmission category information in cases reported to CDC. (See Technical Notes for information on multiple imputation.)

In previous reports, prevalence and death data presented by jurisdiction or region were based on residence at HIV diagnosis; however, information on residence at diagnosis may not reflect a person's current residence or where a person died. In this report, prevalence data presented by MSA are based on a person's most recent known address at year-end of the specified year, and death data presented by MSA are based on a person's residence at death.

## Report Format

Data in this report are presented by MSA of residence at the time of diagnosis for persons whose diagnosis of HIV infection was made during 2015 and by MSA of residence at year-end 2014 (i.e., most recent known address) for persons living with diagnosed HIV infection (prevalence). Data on diagnosis of HIV infection, by sex, age, and race/ethnicity include numerical rankings for rates of diagnoses of HIV infection (Tables $1 \mathrm{a}-1 \mathrm{c}, 2 \mathrm{a}, 3 \mathrm{a}, 4 \mathrm{a}, 5 \mathrm{a}, 10$ ).

The multiple imputation procedure was used to assign transmission categories to cases of HIV infection that were reported without an identified risk factor (Tables $6 \mathrm{a}-9 \mathrm{c}$ ). For more information on this procedure, refer to Technical Notes.

Reported numbers less than 12 and accompanying rates based on these numbers should be interpreted with caution. At the end of each table, rows are included to present summary data for all MSAs, smaller metropolitan areas (population 50,000499,999 ), and nonmetropolitan areas (population less than 50,000 ).

Please read all titles and footnotes carefully to ensure a complete understanding of the data presented in each table.

## Highlights Of Analyses

The statements in this section, unless otherwise indicated, are based on stable rates (i.e., based on 12 or more diagnoses or prevalent cases). All rates are per 100,000 population and refer to adults and adolescents aged 13 years and older. Rates of diagnoses of HIV infection are based on the number of diagnoses of HIV infection during 2015. HIV prevalence is based on the
number of persons living with diagnosed HIV infection as of December 31, 2014.

## Diagnosed HIV Infection among Adults and Adolescents in MSAs, Smaller Metropolitan Areas, and Nonmetropolitan Areas

- For adults and adolescents residing in MSAs in the United States and Puerto Rico, rates of diagnoses of HIV infection (17.8) and HIV prevalence (415.8) are approximately 2 times the rates of those residing in smaller metropolitan areas ( 9.8 and 195.2, respectively), and approximately 3 times the rates of those residing in nonmetropolitan areas (6.2 and 133.0, respectively) (Table 1a).

## Diagnosed HIV Infection among Adults and Adolescents by MSA and Sex

- Among adults and adolescents, the following 5 MSAs had the highest rates of diagnoses of HIV infection: Miami-Fort Lauderdale-West Palm Beach, FL (44.4), Baton Rouge, LA (38.5), Jackson, MS (37.8), New OrleansMetairie, LA (37.6), and Atlanta-Sandy Springs-Roswell, GA (36.0).
- Among male and female adults and adolescents, MSAs in the South had the highest rates of diagnoses of HIV infection. For males, the following 5 MSAs had the highest rates of diagnoses of HIV infection: Miami-Fort Lauderdale-West Palm Beach, FL (73.0), New Orleans-Metairie, LA (63.9), Atlanta-Sandy Springs-Roswell, GA (62.6), Jackson, MS (61.0), and Baton Rouge, LA (55.3). For females, the following 5 MSAs had the highest rates of diagnoses of HIV infection: Baton Rouge, LA (22.6), Miami-Fort Lauderdale-West Palm Beach, FL (17.9), Jackson, MS (17.1), Louisville/Jefferson County, KY-IN (16.5), and New OrleansMetairie, LA (13.4) (Tables 1b/c).
- Among male and female adults and adolescents, HIV prevalence rates ( $1,498.0$ and 565.6 , respectively) were highest in Miami-Fort LauderdaleWest Palm Beach, FL (Tables 1b/c).

## Diagnosed HIV Infection among Adults and Adolescents by MSA, Sex, and Age

- Among males aged 13-24 years, the rate of diagnoses of HIV infection (94.4) was highest in

Jackson, MS, and the HIV prevalence (320.0) was highest in New Orleans-Metairie, LA. Among males aged 25-34 years, the rate of diagnoses of HIV infection (145.4) was highest in Miami-Fort Lauderdale-West Palm Beach, FL, and the HIV prevalence $(1,301.5)$ was highest in Atlanta-Sandy Springs-Roswell, GA. Among all other age groups for males (i.e., 35-44 years, $45-54$ years, and 55 years and older), the rates of diagnoses of HIV infection (96.7, 77.8, and 25.3, respectively) and HIV prevalence rates (1,718.0, $3,068.0$, and $1,492.3$, respectively) were highest in Miami-Fort Lauderdale-West Palm Beach, FL (Tables $2 \mathrm{a} / \mathrm{b}$ ).

- Among females aged 13-24 years, the rate of diagnoses of HIV infection (35.0) was highest in Jackson, MS, and the HIV prevalence (133.5) was highest in Miami-Fort Lauderdale-West Palm Beach, FL. Among females aged 25-34 years, the rate of diagnoses of HIV infection (40.1) and the HIV prevalence (729.0) was highest in Baton Rouge, LA. Among females aged 35-44 years, the rate of diagnoses of HIV infection and the HIV prevalence ( 38.4 and 1,091.2, respectively) was highest in Baton Rouge, LA. Among females aged 45-54 years, the rate of diagnoses of HIV infection (26.1) was highest in Baton Rouge, LA, and the HIV prevalence $(1,061.9)$ was highest in Miami-Fort LauderdaleWest Palm Beach, FL. Among females aged 55 years and older, the rate of diagnoses of HIV infection (9.1) was highest in Miami-Fort Lauderdale-West Palm Beach, FL, and the HIV prevalence (469.1) was highest in New York-Newark-Jersey City, NY-NJ-PA (Tables 3a/b).

## Diagnosed HIV Infection among Adults and Adolescents by MSA, Sex, and Race/Ethnicity

- Among American Indian/Alaska Native males, the only stable rate of diagnoses of HIV infection (i.e., based on 12 or more diagnoses; 64.5) was in Phoenix-Mesa-Scottsdale, AZ; the HIV prevalence $(1,385.4)$ was highest in San Francisco-Oakland-Hayward, CA. Among American Indian/Alaska Native females, the HIV prevalence (445.4) was highest in Bridgeport-Stamford-Norwalk, CT. There were no stable rates of diagnoses of HIV infection for American Indian/Alaska Native females (Tables 4a-5b).
- Among Asian males, the rate of diagnoses of HIV infection (33.4) was highest in Miami-Fort Lauderdale-West Palm Beach, FL. Among Asian males and females, HIV prevalence rates (349.0 and 139.5 , respectively) were highest in Indianapolis-Carmel-Anderson, IN. There were no stable rates of diagnoses of HIV infection for Asian females (Tables 4a-5b).
- Among black/African American males, the 5 MSAs with the highest rates of diagnoses of HIV infection were in the South: Atlanta-Sandy Springs-Roswell, GA (146.6), New OrleansMetairie, LA (137.4), Baton Rouge, LA (134.0), Tampa-St. Petersburg-Clearwater, FL (131.7), and Orlando-Kissimmee-Sanford, FL (126.7).
The HIV prevalence for black/African American males $(3,030.9)$ was highest in Miami-Fort Lauderdale-West Palm Beach, FL. Among black/African American females, 3 of the 5 MSAs with the highest rates of diagnoses of HIV infection were in the South, 1 was in the Midwest and 1 was in the Northeast: Baton Rouge, LA (59.5), Miami-Fort Lauderdale-West Palm Beach, FL (58.4), Minneapolis-St. PaulBloomington, MN-WI (50.1), Boston-Cambridge-Newton, MA-NH (48.8), and Jacksonville, FL (45.9). The HIV prevalence for black/African American females $(2,459.7)$ was highest in Portland-South Portland, ME (Tables 4a-5b).
- Among Hispanic/Latino males, 3 of the 5 MSAs with the highest rates of diagnoses of HIV infection were in the South and 2 were in the Northeast: Buffalo-Cheektowaga-Niagara Falls, NY (91.5), Miami-Fort Lauderdale-West Palm Beach, FL (85.2), New Orleans-Metairie, LA (58.3), New York-Newark-Jersey City, NY-NJPA (58.0), and Austin-Round Rock, TX (54.0). The HIV prevalence for Hispanic/Latino males $(1,789.9)$ was highest in New York-NewarkJersey City, NY-NJ-PA. Among Hispanic/Latino females, 3 of the 5 MSAs with the highest rates of diagnoses of HIV infection were in the Northeast and 2 were in the South: Philadelphia-Camden-Wilmington, PA-NJ-DE-MD (14.4), Boston-Cambridge-Newton, MA-NH (12.7), Orlando-Kissimmee-Sanford, FL (12.3), New York-Newark-Jersey City, NY-NJ-PA (10.3) and Houston-The Woodlands-Sugar Land, TX
(9.0). The HIV prevalence for Hispanic/Latino females (974.8) was highest in Rochester, NY (Tables 4a-5b).
- Data are not presented in Tables 4a-5b for Native Hawaiians/other Pacific Islanders due to small population denominators (i.e., less than 100). Among Native Hawaiian/other Pacific Islander males, the only stable rate of diagnoses of HIV infection (36.5) and HIV prevalence (333.4) was in Honolulu (Urban), HI. Among Native Hawaiian/other Pacific Islander females, the only stable HIV prevalence (80.4) was in Honolulu (Urban), HI.
- Among white males, 3 of the 5 MSAs with the highest rates of diagnoses of HIV infection were in the West and 2 were in the South: Louisville/ Jefferson County, KY-IN (33.9), Miami-Fort Lauderdale-West Palm Beach, FL (33.9), Honolulu (Urban), HI (28.8), Las Vegas-HendersonParadise, NV (28.1), and Los Angeles-Long Beach-Anaheim, CA (27.9). The HIV prevalence for white males $(1,298.1)$ was highest in San Francisco-Oakland-Hayward, CA. Among white females, 3 of the 5 MSAs with the highest rates of diagnoses of HIV infection were in the South, 1 in the Midwest, and 1 in the West: Louisville/ Jefferson County, KY-IN (16.3), Miami-Fort Lauderdale-West Palm Beach, FL (7.2), Palm Bay-Melbourne-Titusville, FL (6.1), Las Vegas-Henderson-Paradise, NV (4.7), and New Orleans-Metairie, LA (4.1). The HIV prevalence for white females (127.5) was highest in MiamiFort Lauderdale-West Palm Beach, FL (Tables 4a-5b).

## Diagnosed HIV Infection among Adults and Adolescents by MSA, Sex, and Transmission Category

- Among males, the estimated numbers of diagnosed HIV infections attributed to male-to-male sexual contact $(2,266)$, and injection drug use (182) were highest in New York-Newark-Jersey City, NY-NJ-PA. The number of diagnosed HIV infections attributed to male-to-male sexual contact and injection drug use (65) was highest in Los Angeles-Long Beach-Anaheim, CA. The number of diagnosed HIV infections attributed to heterosexual contact (314) was highest in

Miami-Fort Lauderdale-West Palm Beach, FL. Also, the estimated numbers of males living with diagnosed HIV infection attributed to male-tomale sexual contact $(57,901)$, injection drug use ( 19,845 ), male-to-male sexual contact and injection drug use $(5,410)$, and heterosexual contact $(10,906)$ were highest in New York-NewarkJersey City, NY-NJ-PA. The estimated numbers of HIV diagnoses and HIV prevalence for all transmission categories among females, including injection drug use (110 and 12,707, respectively) and heterosexual contact (633 and 27,482 , respectively) were highest in New York-Newark-Jersey City, NY-NJ-PA (Tables 6a-7b).

## Diagnosed HIV Infection among Adults and Adolescents by MSA, Race/Ethnicity, and Transmission Category

- Among black/African American adults and adolescents, the estimated numbers of diagnosed HIV infections attributed to male-to-male sexual contact (893) were highest in Atlanta-Sandy Springs-Roswell, GA, while injection drug use (147), male-to-male sexual contact and injection drug use (15), and heterosexual contact (578) were highest in New York-Newark-Jersey City, NY-NJ-PA. Also, the estimated numbers of persons living with diagnosed HIV infection attributed to male-to-male sexual contact $(17,088)$, injection drug use $(15,190)$, male-tomale sexual contact and injection drug use $(1,723)$, and heterosexual contact $(21,094)$ were highest in New York-Newark-Jersey City, NY-NJ-PA (Tables 8a, 9a).
- Among Hispanic/Latino adults and adolescents, the estimated numbers of diagnosed HIV infections attributed to male-to-male sexual contact and male-to-male sexual contact and injection drug use (947 and 24, respectively) were highest in Los Angeles-Long Beach-Anaheim, CA, while injection drug use and heterosexual contact ( 97 and 246, respectively) were highest in New York-Newark-Jersey City, NY-NJ-PA. Also, the estimated persons living with diagnosed HIV infection attributed to male-to-male sexual contact $(19,151)$, injection drug use $(12,403)$, male-to-male sexual contact and injection drug use $(2,200)$, and heterosexual contact
$(12,033)$ were highest in New York-NewarkJersey City, NY-NJ-PA (Tables 8b, 9b).
- Among white adults and adolescents, the estimated numbers of diagnosed HIV infections attributed to male-to-male sexual contact and male-to-male sexual contact and injection drug use ( 453 and 23, respectively) were highest in Los Angeles-Long Beach-Anaheim, CA, while injection drug use (148) was highest in Louisville/Jefferson County, KY-IN, and heterosexual contact (64) was highest in New York-Newark-Jersey City, NY-NJ-PA. Also, the estimated numbers of persons living with diagnosed HIV infection attributed to male-tomale sexual contact $(16,722)$, injection drug use $(3,097)$, and heterosexual contact $(2,643)$ were highest in New York-Newark-Jersey City, NY-NJ-PA, while male-to-male sexual contact and injection drug use $(1,518)$ was highest in San Francisco-Oakland-Hayward, CA (Tables 8c, 9c).

## Deaths of Adults and Adolescents with Diagnosed HIV Infection, by MSA and Sex

- Among adults and adolescents, the death rates in 2014 for persons with diagnosed HIV infection were highest in Baltimore-Columbia-Towson, MD (18.1), Miami-Fort Lauderdale-West Palm Beach, FL (17.2), Baton Rouge, LA (16.8), San Juan-Carolina-Caguas, PR (16.7), and Jackson, MS (16.2) (Table 10).
- Among adult and adolescent males, the death rates in 2014 for persons with diagnosed HIV infection were highest in Baton Rouge, LA (25.0), San Juan-Carolina-Caguas, PR (24.7), Miami-Fort Lauderdale-West Palm Beach, FL (24.5), Baltimore-Columbia-Towson, MD (24.3), and Jackson, MS (21.8) (Table 10).
- Among adult and adolescent females, the death rates in 2014 for persons with diagnosed HIV infection were highest in Baltimore-ColumbiaTowson, MD (12.5), Jackson, MS (11.2), Miami-Fort Lauderdale-West Palm Beach, FL (10.4), San Juan-Carolina-Caguas, PR (9.6), and New Orleans-Metairie, LA (9.4) (Table 10).

## Surveillance of HIV Infection

This report includes case report data from 50 states, the District of Columbia, and Puerto Rico in which laws or regulations require confidential reporting to the jurisdiction (not to CDC), by name for adults and adolescents with confirmed diagnoses of HIV infection. After the removal of personal identifying information, data from these reports were submitted to CDC.

Numbers and rates for 108 MSAs and 28 divisions located within any of these areas were included in the tabulations. Aside from the summary totals for smaller metropolitan (50,000-499,999 population) and nonmetropolitan areas (less than 50,000 ) that were provided in the final rows of each table, data on diagnosed HIV infection among persons who resided in MSAs with populations of less than 500,000 are not presented in detail. The MSAs and divisions were located in 44 states (Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Utah, Virginia, Washington, West Virginia, and Wisconsin), the District of Columbia, and 1 U.S. dependent area (Puerto Rico). Alaska, Montana, North Dakota, South Dakota, Vermont, and Wyoming do not have MSAs within their borders.

## Tabulation and Presentation of Data

The data in this report include information received by CDC through December 31, 2016. Data are presented for adults and adolescents aged 13 years or older with HIV infection diagnosed during 2015 or living with diagnosed HIV infection as of December 31, 2014 (prevalence). Tables include the total numbers and rates of diagnoses of HIV infection in 2015 by MSA of residence at diagnosis, and the total numbers and rates of HIV prevalence by MSA of residence at year-end 2014 (i.e., most recent known address). Summary data are provided for persons residing in MSAs (popula-
tions of 500,000 or more), in metropolitan areas with populations of $50,000-499,999$, and in nonmetropolitan areas (populations of less than 50,000 ), including diagnoses of HIV infection among persons with an unknown county of residence.

Please use caution when interpreting reported numbers less than 12 and accompanying rates based on these numbers.

In accordance with Data Re-Release Agreement for HIV Surveillance and Surveillance-Related Data (issued October 24, 2011) [1], a suppression rule was applied for population denominators less than 100 . This affected Native Hawaiians/other Pacific Islanders, who had female populations of less than 100 in 15 MSAs and male populations of less than 100 in 17 MSAs.

Data for American Indians/Alaska Natives and Asians were excluded from tabulations by MSA, race/ ethnicity, and transmission category (Tables 8a-9c), as nearly all of the case counts for American Indians/ Alaska Natives and Asians in these tables were less than 12 and thus were associated with small numbers and unstable rates.

We excluded data for San Juan-Carolina-Caguas, PR from tables displaying diagnoses of HIV infection by race/ethnicity (Tables 4a-5b, 8a-9c). The 2015 postcensal estimates do not include population estimates for Puerto Rico by race/ethnicity, thereby preventing assessment of the suppression rule for these population denominators.

## Diagnoses of HIV Infection

Data in this report were compiled from diagnoses of HIV infection that were reported by the 50 states, the District of Columbia, and Puerto Rico to CDC through December 31, 2016. All jurisdictions report diagnoses of HIV infection to CDC based on the guidelines for HIV case surveillance, and the jurisdictions classify HIV infection among adults and adolescents by using the 2008 and 2014 surveillance case definitions [2, 3]. Cases diagnosed before 2014 were classified according to the 2008 HIV case definition, and cases diagnosed in 2014 or after were classified according to the 2014 HIV case definition. Please use caution when interpreting data on diagnoses of HIV infection. HIV surveillance reports may not be representative of all persons with

HIV because not all infected persons have (1) been tested or (2) tested at a time when the infection could be detected and diagnosed. Also, some states offer anonymous HIV testing; the results of anonymous tests are not reported to the confidential name-based HIV registries of state and local health departments. Therefore, reports of confidential test results may not represent all persons who tested positive for HIV infection. In addition, testing patterns are influenced by many factors, including the extent to which testing is routinely offered to specific groups, or the availability of, and access to, medical care and testing services. The data presented in this report provide minimum numbers of persons for whom HIV infection has been diagnosed and reported to the surveillance system.

## Persons Living with Diagnosed HIV Infection (Prevalence)

Prevalence of HIV infection was based on the number of persons living with diagnosed HIV infection, regardless of the stage of disease, as of December 31, 2014. The exclusion of data from the most recent year allowed at least 18 months for deaths to be reported and for these deaths to be factored into calculations of prevalence.

## Deaths

Persons reported to the National HIV Surveillance System are assumed alive unless their deaths have been reported to CDC. Death data include all deaths of persons with diagnosed HIV infection, regardless of the cause of death (Table 10). Data are reported for deaths that occurred by December 31, 2014, thereby allowing at least 18 months for deaths to be reported to CDC. For death data, MSA of residence is based on residence at death. When information on residence at death is not available, the MSA where a person's death occurred is used.

## Population of Area of Residence

In the Federal Register for June 28, 2010, the Office of Management and Budget (OMB) published revised standards for defining MSAs in federal statistical activities [4]. These standards, which provided for the identification of MSAs in the United States and Puerto Rico, replaced the 2000 standards. The adoption of the new standards was effective as of June 28, 2010. On February 28, 2013, OMB announced new MSA delineations based on the new standards and Census 2010 data [5]. OMB defines populations of area of residence
as areas with populations of 500,000 or more (MSAs), areas with populations of $50,000-499,999$, or areas with populations of less than 50,000 (nonmetropolitan areas). The Boston-Cambridge-Newton, MA-NH, New York-Newark-Jersey City, NY-NJ-PA, and San Francisco-Oakland-Hayward, CA MSAs all include 1 division with a population less than 500,000 . Therefore, data presented for divisions in these 3 MSAs do not sum to the MSA totals.

## Age

The designation "adults and adolescents" refers to persons aged 13 years and older. For presentations of data on persons living with diagnosed HIV infection (Tables $1 \mathrm{a} / \mathrm{b} / \mathrm{c}, 2 \mathrm{~b}, 3 \mathrm{~b}, 4 \mathrm{~b}, 5 \mathrm{~b}, 6 \mathrm{~b}, 7 \mathrm{~b}, 9 \mathrm{a} / \mathrm{b} / \mathrm{c}$ ), the age-group assignment (e.g., 20-24 years) is based on the person's age as of December 31, 2014. For presentations of data on deaths of persons with diagnosed HIV infection (Table 10), age-group assignment (i.e., 13 years and older) is determined based on the person's age at the time of death. For presentations of data on diagnoses of HIV infection in 2015, the age-group assignment is based on the person's age at the time of diagnosis.

Age-group designations for transmission categories in tables displaying data on prevalence are based on a person's age at the end of 2014. That is, the transmission categories in these tables include persons who were children at the time of diagnosis but who were aged 13 years and older on December 31, 2014.

## Race and Ethnicity

The data presented in this report were collected using OMB's revised standards for ethnic and racial data, which calls for splitting Asian/Pacific Islander into 2 categories (Asian and Native Hawaiian/other Pacific Islander) and collecting 2 categories of ethnicity (Hispanic or Latino and not Hispanic or Latino) [6]. For presentations of data on persons living with diagnosed HIV infection by race/ethnicity (Tables 4b, 5b), the Asian category includes cases in Asians/Pacific Islanders that were diagnosed before the implementation of the new ethnic/racial categories in 2003 plus a small proportion of cases in Asians and Native Hawaiians/other Pacific Islanders that were diagnosed after 2003 and classified according to the old racial category (Asian/ Pacific Islander). Persons living with diagnosed HIV infection includes cases with unknown race/ethnicity that had HIV infection diagnosed before
implementation of the 2001 requirement to have ethnic and racial data for a case.

Ethnicity data were also collected in accordance with the revised OMB standards [6]. Hispanics and Latinos can be of any race (Tables $4 \mathrm{a}-5 \mathrm{~b}, 8 \mathrm{c}, 9 \mathrm{c}$ ).

## Transmission Categories

Transmission category is the term for the classification of cases that summarizes a person's possible HIV risk factors; the summary classification results from selecting, from the presumed hierarchical order of probability, the single risk factor most likely to have been responsible for transmission. For surveillance purposes, a diagnosis of HIV infection is counted only once in the hierarchy of transmission categories. Persons with more than 1 reported risk factor for HIV infection are classified in the transmission category listed first in the hierarchy. The exception is men who had sexual contact with other men and injected drugs; this group makes up a separate transmission category.

Persons whose transmission category is classified as male-to-male sexual contact include men who ever had sexual contact with other men (i.e., homosexual contact) and men who ever had sexual contact with both men and women (i.e., bisexual contact). Persons whose transmission category is classified as heterosexual contact are persons who have ever had heterosexual contact with a person known to have, or to be at high risk for, HIV infection (e.g., an injection drug user).

Cases of HIV infection reported without a risk factor listed in the hierarchy of transmission categories are classified as "no identified risk (NIR)" [7]. Cases classified as NIR include cases that are being followed up by local health department staff; cases in persons whose risk-factor information is missing because they died, declined to be interviewed, or were lost to follow-up; and cases in persons who were interviewed or for whom other follow-up information was available but for whom no risk factor was identified.

Because a substantial proportion of cases of HIV infection are reported to CDC without an identified risk factor, multiple imputation is used to assign a transmission category [7]. Multiple imputation is a statistical approach in which each missing transmission category is replaced with a set of plausible values that represent the uncertainty about the true, but missing, value [8]. The plausible values are analyzed by using standard procedures, and the results from these analyses are then combined to produce the final results. In
the tables displaying transmission categories (Tables $6 \mathrm{a}-9 \mathrm{c}$ ), multiple imputation was used.

## Rates

Rates per 100,000 population were calculated for (1) the numbers of diagnoses of HIV infection in 2015 , (2) the numbers of persons living with diagnosed HIV infection at year-end 2014 (prevalence), and (3) the numbers of deaths at year-end 2014 of persons with diagnosed HIV infection.

The population denominators used to compute rates for areas in the United States and Puerto Rico were based on the Vintage 2015 postcensal estimates file from the U.S. Census Bureau [9]. Each rate was calculated by dividing the total number of diagnoses (or deaths or prevalence) for the calendar year by the population for that calendar year and then multiplying that number by 100,000 . The denominators used for calculating the rates specific to age, sex, and race/ethnicity were computed by applying the appropriate vintage estimates for age, sex, and race/ethnicity for the 50 states and the District of Columbia [9]. The same method was used to calculate the denominators for Puerto Rico.

CDC currently does not provide subpopulation rates by race/ethnicity for Puerto Rico because the U.S. Census Bureau does not collect information from all dependent areas. Rates for transmission categories are not provided in this report because of the absence of denominator data from the U.S. Census Bureau, the source of data used for calculating all rates in this report. For this reason, and because the suppression rule could not be assessed for all population denominators (see Tabulation and Presentation of Data), rates for San Juan-Carolina-Caguas, PR were not calculated for the tables displaying race/ethnicity (Tables $4 \mathrm{a} / \mathrm{b}, 5 \mathrm{a} / \mathrm{b}, 8 \mathrm{a} / \mathrm{b} / \mathrm{c}, 9 \mathrm{a} / \mathrm{b} / \mathrm{c}$ ).

## Ranks

Rank refers to the number assigned to an area or an MSA according to the magnitude of the measure, without consideration for the distance between the values [10]. The lowest rank number was assigned to the highest value of the measure. Ties were resolved by assigning the smallest of the corresponding ranks according to the SAS rank procedure [11]. Because rank indicates a relative position in a series, a rank value is influenced by fluctuations associated with the corresponding area or MSA as well as those of the
other sites in the series. Rates based on reported numbers less than 12 were not assigned a rank.

| Total ${ }^{\text {f }}$ | 40,365 | 14.9 | - | 965,129 | 358.7 |

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Because of the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States and Puerto Rico.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
a Data are based on residence at HIV diagnosis.
${ }^{\mathrm{b}}$ Data are based on address of residence at the end of the specified year (i.e., most recent known address).
${ }^{C}$ Rates are per 100,000 population.
${ }^{d}$ Based on rate. Ranks were not assigned to MSAs with rates that were based on reported numbers less than 12.
${ }^{\text {e }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of $<500,000$.
f Includes persons whose county of residence is unknown.

| Total ${ }^{\text {f }}$ | 7,599 | 5.5 | - | 234,474 | 170.3 |

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Because of the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States and Puerto Rico.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
a Data are based on residence at HIV diagnosis.
${ }^{\mathrm{b}}$ Data are based on address of residence at the end of the specified year (i.e., most recent known address).
${ }^{C}$ Rates are per 100,000 population.
${ }^{d}$ Based on rate. Ranks were not assigned to MSAs with rates that were based on reported numbers less than 12.
${ }^{\mathrm{e}}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
f Includes persons whose county of residence is unknown.

 and Puerto Rico.

MSA, metropolitan statistical area
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.htm
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
${ }^{a}$ Rates are per 100,000 population.
b Based on rate. Ranks were not assigned to MSAs with rates that were based on reported numbers less than 12.
${ }^{\text {C }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
d Includes persons whose county of residence is unknown.

 the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States and Puerto Rico.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://uww.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
${ }^{a}$ Rates are per 100,000 population.
${ }^{\text {b }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
${ }^{\text {C }}$ Includes persons whose county of residence is unknown.

 and Puerto Rico.

MSA, metropolitan statistical area
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.htm1.
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
${ }^{a}$ Rates are per 100,000 population.
b Based on rate. Ranks were not assigned to MSAs with rates that were based on reported numbers less than 12.
${ }^{\text {C }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of < 500,000 .
${ }^{\mathrm{d}}$ Includes persons whose county of residence is unknown.

the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States and Puerto Rico.
MSA, metropolitan statistical area
MSA definitions for this report can be found at http://uww.census.gov/programs-surveys/metro-micro.htm.
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
${ }^{\mathrm{a}}$ Rates are per 100,000 population.
${ }^{\text {b }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division vith population of <500,000.
${ }^{\text {C }}$ Includes persons whose county of residence is unknown.

 MSA, metropolitan statistical area
MSA definitions for this report can be found at http://uww.census.gov/programs-surveys/metro-micro.htm
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
Data for Native Hawaiians/other Pacific Islanders are not presented due to small population denominators (i.e., less than 100). However, data are summarized in Commentary.
${ }^{\text {a }}$ Hispanics/Latinos can be of any race
${ }^{b}$ Rates are per 100,000 population.
${ }^{\text {C }}$ Based on rate. Ranks were not assigned to MSAs with rates that were based on reported numbers less than 12.
d Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of $<500,000$.
 population denominators (i.e., cells suppressed when population denominator <100).
${ }^{f}$ Includes persons whose county of residence is unknown.

the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States. Data excludes 680 persons whose race/ethnicity is unknown.
MSA, metropolitan statistical area
MSA definitions for this report can be found at http://uww.census.gov/programs-surveys/metro-micro.htm
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
Data for Native Hawaiians/other Pacific Islanders are not presented due to small population denominators (i.e., less than 100). However, data are summarized in Commentary.
a Includes Asian/Pacific Islander legacy cases (see Technical Notes)
${ }^{\mathrm{b}}$ Hispanics/Latinos can be of any race.
C Rates are per 100,000 population.
d Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of $<500,000$.
 population denominators (i.e., cells suppressed when population denominator <100).
f Includes persons whose county of residence is unknown.

 MSA, metropolitan statistical area
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.htm.
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
Data for Native Hawaiians/other Pacific Islanders are not presented due to small population denominators (i.e., less than 100). However, data are summarized in Commentary.
${ }^{\mathrm{a}}$ Hispanics/Latinos can be of any race.
${ }^{b}$ Rates are per 100,000 population.
C Based on rate. Ranks were not assigned to MSAs with rates that were based on reported numbers less than 12.
d Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
 f population denominators (i.e., cells suppressed when population denominator <100).
f Includes persons whose county of residence is unknown.

Table 5b. Adult and adolescent females living with diagnosed HIV infection (prevalence), by race/ethnicity and metropolitan statistical area of residence, year-end 2014-

 the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States. Data excludes 265 persons whose race/ethnicity is unknown.
MSA, metropolitan statistical area
MSA definitions for this report can be found at http://uww.census.gov/programs-surveys/metro-micro.htm.
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
Data for Native Hawaiians/other Pacific Islanders are not presented due to small population denominators (i.e., less than 100). However, data are summarized in Commentary.
a Includes Asian/Pacific Islander legacy cases (see Technical Notes).
${ }^{\mathrm{b}}$ Hispanics/Latinos can be of any race.
${ }^{\text {C }}$ Rates are per 100,000 population.
d Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
 population denominators (i.e., cells suppressed when population denominator <100)
f Includes persons whose county of residence is unknown.

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Data have been statistically adjusted to account for missing transmission category. Data are based on address of residence at the end of the specified year (i.e., most recent known address). Because of the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States and Puerto Rico.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12 should be interpreted with caution.
${ }^{\mathrm{a}}$ Heterosexual contact with a person known to have, or to be at high risk for, HIV infection.
b Includes hemophilia, blood transfusion, perinatal exposure, and risk factor not reported or not identified.
c Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of $<500,000$.
d Includes persons whose county of residence is unknown.

| Subtotal for MSAs (population of $\geq 500,000$ ) | 6,403 | 387 | 239 | 1,325 | 12 |
| Metropolitan areas (population of 50,000-499,999) | 474 | 39 | 26 | 177 | 1 |
| Nonmetropolitan areas | 187 | 32 | 10 | 67 | 0 |
| Total ${ }^{\text {e }}$ | 7,100 | 460 | 276 | 1,573 | 13 |

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Data have been statistically adjusted to account for missing transmission category. Because of the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States. Data excludes 945 persons whose race/ethnicity is unknown.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12 should be interpreted with caution.
Hispanics/Latinos can be of any race.
${ }^{\text {a }}$ Heterosexual contact with a person known to have, or to be at high risk for, HIV infection.
b Includes hemophilia, blood transfusion, perinatal exposure, and risk factor not reported or not identified.
${ }^{\text {c }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
d Data are not presented for San Juan-Carolina-Caguas, PR. The 2015 postcensal estimates do not include population denominators by race/ethnicity for Puerto Rico, thereby preventing assessment of the suppression rule for population denominators (i.e., cells suppressed when population denominator <100).
${ }^{\mathrm{e}}$ Includes persons whose county of residence is unknown.

| Subtotal for MSAs (population of $\geq 500,000$ ) | 5,802 | 734 | 461 | 934 | 8 |
| Metropolitan areas (population of 50,000-499,999) | 1,054 | 129 | 113 | 262 | 3 |
| Nonmetropolitan areas | 650 | 103 | 49 | 177 | 2 |
| Total ${ }^{\text {e }}$ | 7,570 | 973 | 628 | 1,382 | 13 |

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Data have been statistically adjusted to account for missing transmission category. Because of the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States. Data exclude 945 persons whose race/ethnicity is unknown.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12 should be interpreted with caution.
${ }^{\text {a }}$ Heterosexual contact with a person known to have, or to be at high risk for, HIV infection.
b Includes hemophilia, blood transfusion, perinatal exposure, and risk factor not reported or not identified.
${ }^{\text {C }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
${ }^{d}$ Data are not presented for San Juan-Carolina-Caguas, PR. The 2015 postcensal estimates do not include population denominators by race/ethnicity for Puerto Rico, thereby preventing assessment of the suppression rule for population denominators (i.e., cells suppressed when population denominator <100).
e Includes persons whose county of residence is unknown.

| Nonmetropolitan areas | 2,738 | 1,431 | 500 | 1,522 | 94 |
| Total ${ }^{\text {e }}$ | 110,158 | 30,663 | 10,630 | 43,735 | 2,993 |

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Data have been statistically adjusted to account for missing transmission category. Data are based on address of residence at the end of the specified year (i.e., most recent known address). Because of the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States. Data excludes 945 persons whose race/ethnicity is unknown.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12 should be interpreted with caution.
Hispanics/Latinos can be of any race.
$\mathrm{a}_{\text {Heterosexual contact with }}$ a person known to have, or to be at high risk for, HIV infection.
${ }^{\mathrm{b}}$ Includes hemophilia, blood transfusion, perinatal exposure, and risk factor not reported or not identified.
${ }^{\text {C }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
${ }^{\text {d }}$ Data are not presented for San Juan-Carolina-Caguas, PR. The 2015 postcensal estimates do not include population denominators by race/ethnicity for Puerto Rico, thereby preventing assessment of the suppression rule for population denominators (i.e., cells suppressed when population denominator <100).
${ }^{\mathrm{e}}$ Includes persons whose county of residence is unknown.

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Data have been statistically adjusted to account for missing transmission category. Data are based on address of residence at the end of the specified year (i.e., most recent known address). Because of the lack of U.S. census information for all U.S. dependent areas, table includes data for only the United States. Data excludes 945 persons whose race/ethnicity is unknown.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12 should be interpreted with caution.
${ }^{\text {a }}$ Heterosexual contact with a person known to have, or to be at high risk for, HIV infection.
b Includes hemophilia, blood transfusion, perinatal exposure, and risk factor not reported or not identified.
${ }^{\text {c }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of $<500,000$.
 thereby preventing assessment of the suppression rule for population denominators (i.e., cells suppressed when population denominator <100).
${ }^{\mathrm{e}}$ Includes persons whose county of residence is unknown.

 on residence at death. When information on residence at death was not available, state at death (where a person's death occurred) was used.
MSA, metropolitan statistical area.
MSA definitions for this report can be found at http://www.census.gov/programs-surveys/metro-micro.html.
Numbers less than 12, and rates based on these numbers, should be interpreted with caution.
${ }^{a}$ Rates are per 100,000 population.
${ }^{\mathrm{b}}$ Based on rate. Ranks were not assigned to MSAs that were based on reported numbers less than 12.
${ }^{\text {c }}$ Counts of diagnoses of HIV infection in the metropolitan divisions do not sum to the MSA total. MSA total includes data from 1 metropolitan division with population of <500,000.
${ }^{\mathrm{d}}$ Includes persons whose county of residence is unknown.
