Supplemental Figure 1B. Flow chart depicting study screening and selection process for systematic review of studies that assessed completeness of 24-hour urine collections by both para-amino benzoic acid (PABA) and another test method (Second Librarian Search employing databases from 1937-Present).

Literature Search:

Databases Screened:
- MEDLINE [348]; EMBASE-(non-Medline Journals) [39]; Global Health [42]; CINHAL [123]; Cochrane Library [88]; LILACS [13]

Search Results (N=626)

N=626 Abstracts Screened

N=579 Reviewer Excluded:
- Not relevant
- Did not use PABA and/or Creatinine
- Did not collect 24-hour urine collections

N=47 Abstracts Ordered to Assess for Eligibility

N=46 Articles Excluded
- N=2 Abstract Only
- N=30 Did not use PABA and/or appropriate test method
- N=13 Not relevant
- N=1 Already included in previous search
