**Appendix**  
**Evaluation of School-Based Dental Sealant Programs:**  
**An Updated Community Guide Systematic Economic Review**  
**Griffin et al.**

					study horizon because of insufficient information to estimate sealant replacement costs for later years. Because more children were sealed under 'school', sealant cost per child was \$20.7 higher than for private. Difference in restoration costs per child between 'private' and 'school' would be \$7.1.	
--	--	--	--	--	--	--

---

<sup>a</sup> Study also included strategy of providing sealants free of charge only to high-risk children in school settings. Reviewers did not include this strategy as sealant prevalence among high-risk children was lower than for the other strategies. One rationale for the Task Force's recommendation of school sealant programs was that they increase sealant prevalence among school children.

**Appendix B Table 4.** Net Cost of Delivering Sealants to Medicaid-Enrolled Children

	<b>Net Cost to Medicaid</b>	<b>Net Cost to Society<sup>a</sup></b>
Dasanayake <sup>40</sup> <sup>b</sup>	-\$26.71	-\$36.41
Weintraub <sup>45</sup> low risk	\$23.53	\$18.59
Weintraub <sup>45</sup> medium risk	\$6.97	-\$5.99
Weintraub <sup>45</sup> high risk	-\$6.30	-\$24.41
Bhuridej <sup>39</sup> (UL1M)	\$5.41	\$0.32
Bhuridej <sup>39</sup> (UR1M)	\$6.39	\$0.09
Bhuridej <sup>39</sup> (LR1M)	\$16.07	\$10.93
Bhuridej <sup>39</sup> (LL1M)	\$3.93	-\$2.12

<sup>a</sup>Productivity losses estimated by reviewers.

<sup>b</sup>Dasanayake costs are per child.

1M, first molar; L, lower arch; L, left; R, right; U, upper arch

## **APPENDIX C. SENSITIVITY ANALYSIS – ANNUAL NET COST PER TOOTH**

One- and two-way sensitivity analyses were conducted to examine the effect on findings from imputing productivity losses for studies that did not present them, including studies with outlier values, limiting school sealant program (SSP) benefit to 4 years, and including non-U.S. studies.

### **One-Way Sensitivity Analyses—Annual Economic Benefit Per Sealed Tooth**

Information from six studies was used to estimate economic benefit. For three of these studies that did not include productivity losses in their calculations of economic benefit,<sup>40,41,45</sup> productivity losses were estimated and added to averted treatment costs to obtain total economic benefit. When estimated productivity losses were allowed to decrease to 50%, 25%, and 0% of the estimated value, the economic benefit per tooth decreased from \$6.29 to \$5.67, \$5.26, and \$4.84, respectively. Finally, if the one non-U.S. study<sup>42</sup> that had an outlier value for benefit (\$0.78 per tooth per year) were excluded, median economic benefit increased to \$6.50.

### **One-Way Sensitivity Analysis – Net Cost Per Sealed Tooth**

Using the median annual benefit and the one-time median cost per tooth sealed, the net cost of SSP over 4 years was estimated to be –\$11.73 (Appendix B Table 3, above). When the time horizon was expanded to 8 years, the net cost decreased to –\$32.50.

### **Two-Way Sensitivity Analysis – Net Cost Per Sealed Tooth**

The net cost of an SSP under worst-case (median cost and benefit took on their highest and lowest values, respectively) and best-case (median cost and benefit took on their lowest and highest values, respectively) assumptions was estimated. Median cost was highest when all studies were included (\$11.64) and lowest when the two studies with above-average time to

**Appendix**  
**Evaluation of School-Based Dental Sealant Programs:**  
**An Updated Community Guide Systematic Economic Review**  
**Griffin et al.**

place sealants<sup>38,46</sup> were excluded (\$8.49). Median benefit was highest when only U.S. studies were included and productivity losses were imputed (\$6.50), and lowest when all studies were included and productivity losses were not imputed (\$4.84). Net cost increased to -\$6.35 under worst-case assumptions. In addition, SSP did not become cost saving until 3 years after implementation compared to 2 years under base case assumptions. Under best-case assumptions, net cost decreased to -\$12.50.
