### **Supplemental Material**

#### **Personal care product use in men and urinary concentrations of select phthalate metabolites and parabens: results from the Environment And Reproductive Health (EARTH) Study**

Feiby L. Nassan, Brent A. Coull, Audrey J. Gaskins, Michelle A. Williams, Niels E. Skakkebaek, Jennifer B. Ford, Xiaoyun Ye, Antonia M. Calafat, Joseph M. Braun, Russ Hauser

#### **Table of Contents**

##### **Product Use Questionnaire in the Environment And Reproductive Health (EARTH) Study.**

**Figure S1.** Spearman correlation between urinary concentrations of phthalate metabolites and parabens among 965 samples provided by men in the Environment And Reproductive Health (EARTH) Study.

**Table S1.** Adjusted <sup>a</sup> percent change associated with the weighted score: (based on binary use up to 24 hours use and 6 hours) using the weighted binary score (WBS) in the 10 imputed data.

**Table S2.** Adjusted <sup>a</sup> odds ratio for detected versus undetected urinary butylparaben associated with last 24 hours personal care product use in the 10 imputed data.

**Figure S2.** Heatmap for adjusted % change in urinary concentrations of phthalate metabolites and parabens associated with self-report use of personal care products (PCPs) within 24 hours of urine sample collection among 400 men who contributed 1037 urine samples in the Environment And Reproductive Health (EARTH) Study in the complete case data.

**Table S3.** Adjusted <sup>a</sup> odds ratio for detected versus undetected urinary butylparaben associated with last 24 hours personal care product use in the complete case data.

**Figure S3.** (Panels A to E): Adjusted % change in urinary concentrations of parabens and phthalate metabolites associated with use of 14 personal care products (PCPs) within 24 and 6 hours of urine collection in the complete case analysis.

**Table S4.** Adjusted <sup>a</sup> percent change associated with the weighted score: (based on binary use up-to 24 hours use and 6 hours) using the weighted binary score (WBS) in the complete case data.

**Figure S4.** Heatmap for adjusted % change in urinary concentrations of phthalate metabolites and parabens associated with self-report use of personal care products (PCPs) within 24 hours of urine sample collection among 400 men who contributed 1037 urine samples in the Environment And Reproductive Health (EARTH) Study in the imputed missing as zero.

**Table S5.** Adjusted <sup>a</sup> odds ratio for detected versus undetected urinary butylparaben associated with last 24 hours personal care product use in the imputed missing as zero.

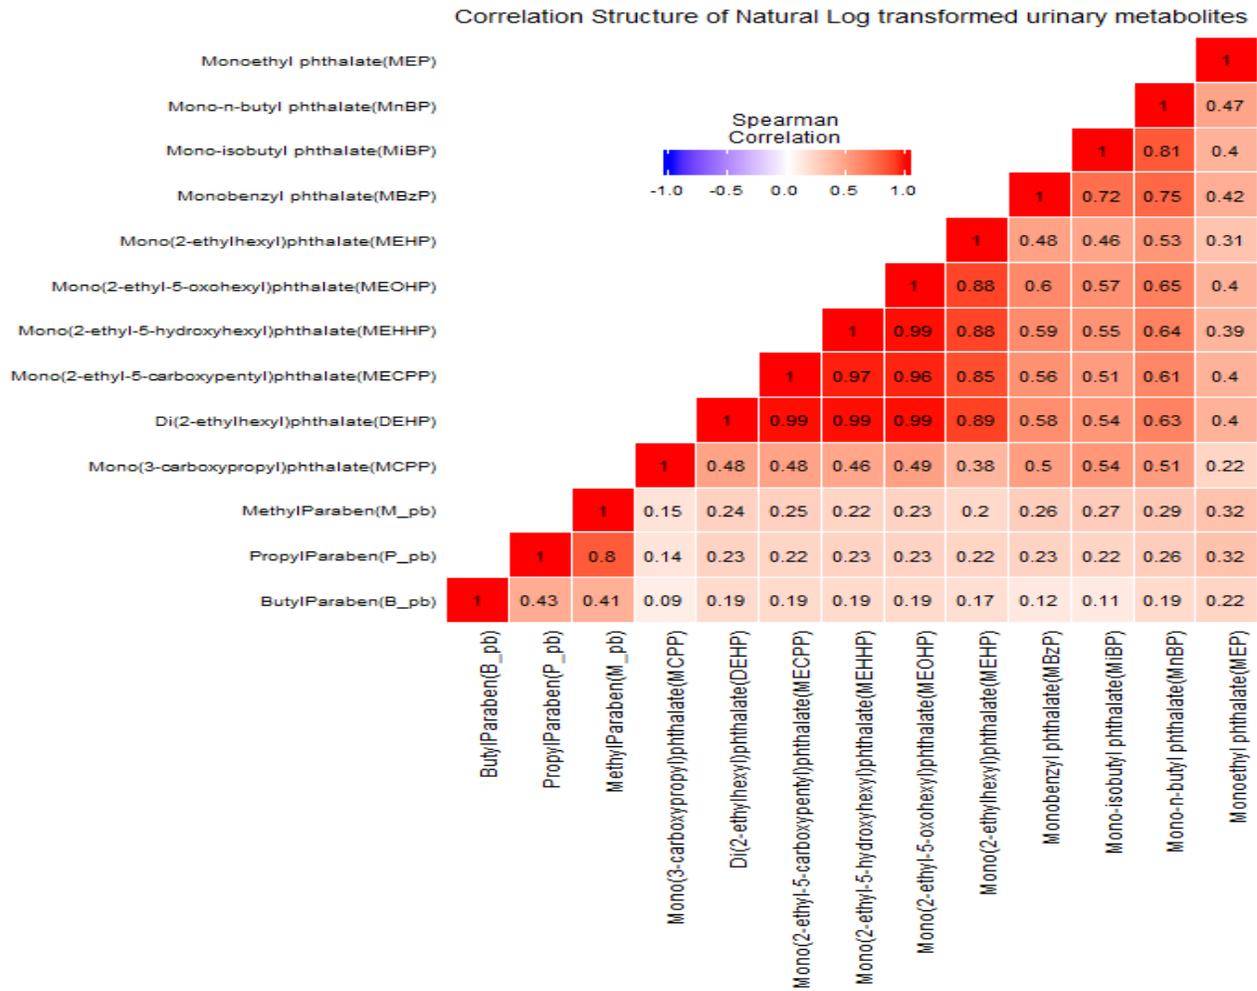

**Figure S5.** (Panels A to E): Adjusted % change in urinary concentrations of parabens and phthalate metabolites associated with use of 14 personal care products (PCPs) within 24 and 6 hours of urine collection in the imputed missing as zero.

**Table S6.** Adjusted <sup>a</sup> percent change associated with the weighted score: (based on binary use up-to 24 hours use and 6 hours) using the weighted binary score (WBS) in the imputed missing as zero.

**Product Use Questionnaire in the Environment And Reproductive Health (EARTH) Study.**

**Figure S1. Spearman correlation between urinary concentrations of phthalate metabolites and parabens among 965 samples provided by men in the Environment And Reproductive Health (EARTH) Study.**

<sup>a</sup> 1037 urine samples were analyzed for phthalate metabolites and 965 for parabens.

<sup>b</sup> For Spearman correlations, data was restricted to 965 urine samples for which both phthalate metabolites and parabens were measured.

**Table S1. Adjusted <sup>a</sup> percent change associated with the weighted score: (based on binary use up-to 24 hours use and 6 hours) using the weighted binary score (WBS) in the 10 imputed data.**

Urinary biomarker	Percent change associated with the weighted score for the 14 PCPs: (based on binary use up-to 24 hours use)		Percent change associated with the weighted with the weighted score: (based on binary use up-to 6 hours use)	
	% Change (95% CI)	p-value	% Change (95% CI)	p-value
MEP	700 (258, 1686)	2.42E-06	961 (485, 1823)	1.80E-14
MnBP	39.0 (-29.5, 174)	0.33	13.7 (-18.5, 58.6)	0.45

<sup>d</sup> Total products: the crude sum of PCP used within 24 hours

<sup>e</sup> The total products’ bars represent percent changes associated with each additional type of PCP used, regardless of which PCP.

<sup>f</sup> Combined other hair care products included mousse, hair bleach, relaxer, perm and straightener

**Table S6. Adjusted <sup>a</sup> percent change associated with the weighted score: (based on binary use up-to 24 hours use and 6 hours) using the weighted binary score (WBS) in the imputed missing as zero.**

Urinary biomarker	Percent change associated with the weighted score: (based on binary use up-to 24 hours use)		Percent change associated with the weighted score: (based on binary use up-to 6 hours use)	
	% Change (95% CI)	p-value	% Change (95% CI)	p-value
MEP	980 (496,1858)	<.0001	1483 (729,2924)	<.0001
MnBP	68 (11,155)	0.02	115 (34,246)	0.002
MiBP	89 (12,220)	0.02	102 (18,246)	0.01
MBzP	6 (-36,76)	0.81	10 (-37,94)	0.74
MEHP	3 (-38,71)	0.91	-4 (-47,75)	0.91
MEOHP	3 (-35,61)	0.91	13 (-28,76)	0.60
MEHHP	-1 (-38,60)	0.98	19 (-27,94)	0.49
MECPP	0 (-33,50)	0.99	12 (-21,59)	0.51
∑DEHP <sup>b</sup>	1 (-34,53)	0.98	12 (-24,65)	0.57
MCPP	47 (-19,167)	0.21	-9 (-51,72)	0.78
Methylparaben	6202 (2785,13668)	<.0001	9350 (3876,22362)	<.0001
Propylparaben	6512 (2099,19778)	<.0001	17283 (4909,60235)	<.0001
Butylparaben	199 (54,479)	0.001	487 (199,1055)	<.0001

Abbreviations: 95% CI; 95% confidence intervals, MEP; Monoethyl phthalate, MnBP; Mono-n-butyl phthalate, MiBP; Mono-isobutyl phthalate, MBzP; Monobenzyl phthalate, MEHP; Mono(2-ethylhexyl) phthalate, MEOHP; Mono(2-ethyl-5-oxohexyl) phthalate, MEHHP; Mono(2-ethyl-5-hydroxyhexyl) phthalate, MECPP; Mono(2-ethyl-5-carboxypentyl) phthalate, DEHP; (Di(2-ethylhexyl) phthalate) metabolites, MCPP; Mono(3-carboxypropyl) phthalate.

<sup>a</sup> Analysis adjusted for urine specific gravity (continuous), race (Caucasian or not), age (continuous), BMI (continuous), calendar year (continuous), time of sample collection (early morning (5am< and <=9am), late morning (9am< and <=12pm) or afternoon(>12pm)), current smoking (yes/no), warm season (April through September) (yes/no) and the product use within 24 hours (yes/no).

<sup>b</sup> ∑DEHP metabolites= MEHP+ MEOHP+ MEHHP+ MECPP weighted by the molecular weight.
