Abbreviations: ID = insufficient data; NA = not applicable

\* The 21 Pacific Island countries and areas are considered as one epidemiologic block for purposes of measles surveillance.

† Excludes epidemiologically linked cases.

§ Since 2015, laboratory performance is assessed using ≤4 days between specimen collection and specimen receipt at testing laboratory. For comparability, the 7-day threshold is reported for both years.

¶ Reports only confirmed cases.

\*\* Insufficient data reported by the country to calculate the indicator.

†† No second-level unit within the country or area.
