Percentage* of Children Aged 6-17 Years Who Wear Glasses or Contact Lenses, ${ }^{\dagger}$ by Sex and Age Group - National Health Interview Survey, 2016§

* With $95 \%$ confidence intervals indicated with error bars.
† Based on the survey response of"yes"to the question"Does (child's name) wear eyeglasses or contact lenses?" Children who are blind were excluded from these estimates.
§ Estimates are based on household interviews of a sample of the civilian, noninstitutionalized U.S. population and are derived from the National Health Interview Survey Sample Child component.

In 2016, the percentage of children aged 6-17 years who wear eyeglasses or contact lenses was higher among girls (36.2\%) compared with boys (29.1\%). Girls aged 6-9 years ( $20.2 \%$ ) and 14-17 years ( $51.9 \%$ ) were more likely than boys of the same age group ( $14.9 \%$ and $38.8 \%$, respectively) to wear eyeglasses or contact lenses. There was no statistically significant difference by sex for children aged $10-13$ years ( $35.9 \%$ among girls, $33.5 \%$ among boys). Among both girls and boys, children aged $14-17$ years were most likely to wear eyeglasses or contact lenses, and children aged 6-9 years were least likely to wear eyeglasses or contact lenses.
