Maternity Practices in Infant Nutrition and Care In **Florida** —2009 mPINC Survey

This report provides data from the 2009 mPINC survey for Florida. It describes specific opportunities to improve mother-baby care at hospitals and birth centers in Florida in order to more successfully meet national quality of care standards for perinatal care.

More information is at www.cdc.gov/mpine

Breastfeeding is a Breastfeeding is associated with decreased risk for infant morbidity and mortality as well as National Priority maternal morbidity, and provides optimal infant nutrition. Healthy People 2020 establishes breastfeeding initiation, continuation, and exclusivity as national priorities.

Breastfeeding Rates breastfeeding.4

Changes in Maternity practices in hospitals and birth centers can influence breastfeeding behaviors Maternity Care during a period critical to successful establishment of lactation.³ Abundant literature, including a Cochrane review, document that institutional changes in maternity care practices Practices Improve to make them more supportive of breastfeeding increase initiation and continuation of

Breastfeeding Support in Florida Facilities

Strengths

Availability of Prenatal Breastfeeding Instruction

Most facilities (99%) in Florida include breastfeeding education as a routine element of their prenatal classes. Prenatal education about breastfeeding is important because it provides mothers with a better understanding of the benefits and requirements of breastfeeding, resulting in improved breastfeeding rates.

Provision of Breastfeeding Advice and Counseling

Staff at 92% of facilities in Florida provide breastfeeding advice and instructions to patients who are breastfeeding, or intend to breastfeed.

The American Academy of Pediatrics (AAP) recommends pediatricians provide patients with complete, current information on the benefits and methods of breastfeeding to ensure that the feeding decision is a fully informed one. Patient education is important in order to establish breastfeeding.

Needed Improvements

Appropriate Use of Breastfeeding Supplements

Only 15% of facilities in Florida adhere to standard clinical practice guidelines against routine supplementation with formula, glucose water, or water.

The American Academy of Pediatrics (AAP) and the American College of Obstetricians and Gynecologists (ACOG) Guidelines for Perinatal Care recommend against routine supplementation because supplementation with formula and/or water makes infants more likely to receive formula at home and stop breastfeeding prematurely.

Inclusion of Model Breastfeeding Policy Elements

Only 13% of facilities in Florida have comprehensive breastfeeding policies including all model breastfeeding policy components recommended by the Academy of Breastfeeding Medicine (ABM).

The ABM model breastfeeding policy elements are the result of extensive research on best practices to improve breastfeeding outcomes. Facility policies determine the nature of care that is available to patients. Facilities with comprehensive policies consistently have the highest rates of exclusive breastfeeding, regardless of patient population characteristics such as ethnicity, income, and payer status.

Provision of Hospital Discharge Planning Support

Only 26% of facilities in Florida provide hospital discharge care including a phone call to the patient's home, opportunity for follow-up visit, and referral to community breastfeeding support.

The American Academy of Pediatrics (AAP) clinical practice guidelines recommend examination of the newborn by a qualified health care professional within 48 hours of hospital discharge in order to assess breastfeeding. Ensuring post discharge ambulatory support improves breastfeeding outcomes

Initiation of Mother and Infant Skin-to-Skin Care

Only 46% of facilities in Florida initiate skin-to-skin care for at least 30 minutes upon delivery of the newborn.

Upon delivery, the newborn should be placed skin-to-skin with the mother and allowed uninterrupted time to initiate and establish breastfeeding in order to improve infant health outcomes and reduce the risk of impairment of the neonatal immune system from unnecessary non-breast milk feeds.

Every two years, CDC administers the national Maternity Practices in Infant Nutrition and Care (mPINC) survey to all hospitals and birth centers in the U.S. that provide maternity care.

Data from this survey can be used to establish evidence-based, breastfeeding-supportive maternity practices as standards of care in hospitals and birth centers across the US. Improved care will help meet Healthy People 2020 breastfeeding objectives and will help improve maternal and child health nationwide.

National Center for Chronic Disease Prevention and Health Promotion

Florida Summary —2009 mPINC Survey

Survey At each facility, the person who is the most knowledgeable about the facility's Method maternity practices related to healthy newborn feeding and care completes the CDC mPINC survey.

Response 80% of the 124 eligible facilities in Florida responded to the 2009 mPINC Survey. Rate Each participating facility received its facility-specific mPINC benchmarking report in March 2011.

Florida's **Composite Quality** Practice Score

Florida's Composite Rank[†]

(out of 52)

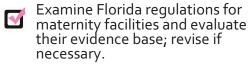

mPINC Dimension of Care	FL Quality Practice Subscore*	Ideal Response to mPINC Survey Question	Percent of FL Facilities with Ideal Response	FL Item Rank [†]
		Initial skin-to-skin contact is ≥30 min w/in 1 hour (vaginal births)	46	21
Labor and Delivery Care		Initial skin-to-skin contact is ≥30 min w/in 2 hours (cesarean births)	27	33
	63	Initial breastfeeding opportunity is w/in 1 hour (vaginal births)	55	23
		Initial breastfeeding opportunity is w/in 2 hours (cesarean births)	32	38
		Routine procedures are performed skin-to-skin	24	18
		Initial feeding is breast milk (vaginal births)	69	35
Feeding of Breastfed	77	Initial feeding is breast milk (cesarean births)	52	44
Infants		Supplemental feedings to breastfeeding infants are rare	15	37
		Water and glucose water are not used	82	16
		Infant feeding decision is documented in the patient chart	98	-
		Staff provide breastfeeding advice & instructions to patients	92	-
Breastfeeding Assistance		Staff teach breastfeeding cues to patients	84	21
	82	Staff teach patients not to limit suckling time	45	20
		Staff directly observe & assess breastfeeding	87	17
		Staff use a standard feeding assessment tool	54	38
		Staff rarely provide pacifiers to breastfeeding infants	34	21
Contact Between Mother and Infant		Mother-infant pairs are not separated for postpartum transition	63	22
		Mother-infant pairs room-in at night	81	14
	74	Mother-infant pairs are not separated during the hospital stay	45	16
		Infant procedures, assessment, and care are in the patient room	1	31
		Non-rooming-in infants are brought to mothers at night for feeding	75	39
Facility	Discharge 42 (referrals & Discharge pa	Staff provide appropriate discharge planning (referrals & other multi-modal support)	26	25
		Discharge packs containing infant formula samples and marketing products are not given to breastfeeding patients	35	19
		New staff receive appropriate breastfeeding education	9	17
Staff Training 4	40	Current staff receive appropriate breastfeeding education	6	45
	48	Staff received breastfeeding education in the past year	39	30
		Assessment of staff competency in breastfeeding management & support is at least annual	53	20
		Breastfeeding policy includes all 10 model policy elements	13	22
Structural & Organizational Aspects of Care Delivery	69	Breastfeeding policy is effectively communicated	64	38
		Facility documents infant feeding rates in patient population	68	20
		Facility provides breastfeeding support to employees	68	22
		Facility does not receive infant formula free of charge	13	17
		Breastfeeding is included in prenatal patient education	99	-
		Facility has a designated staff member responsible for coordination of lactation care	74	23

^{*} Quality Practice scores range from o to 100 for each question, dimenstion of care, facility, and state. The highest, best possible score for each is 100. Each facility and state's "Composite Quality Practice Score" is made up of subscores for practices in each of 7 dimensions of care.

Improvement is Needed in **Maternity Care Practices** and Policies in Florida.

Many opportunities exist to protect, promote, and support breastfeeding mothers and infants in Florida.

Take action on this critical need—consider the following:

Sponsor a Florida-wide summit of key decision-making staff at maternity facilities to highlight the importance of evidencebased practices for breastfeeding.

Pay for hospital staff across Florida to participate in 18-hour training courses in breastfeeding.

Establish links among maternity facilities and community breastfeeding support networks in Florida.

Identify and implement programs within hospital settings—choose one widespread practice and adjust it to be evidence-based and supportive of breastfeeding.

Integrate maternity care into related hospital-wide Quality Improvement efforts across Florida.

Promote Florida-wide utilization of the Joint Commission's Perinatal Care Core Measure Set including exclusive breastfeeding at discharge in hospital data collection.

Questions about the mPINC survey?
