Maternity Practices in Infant Nutrition and Care in Delaware —2011 mPINC Survey

This report provides data from the 2011 mPINC survey for Delaware. It describes specific opportunities to improve mother-baby care at hospitals and birth centers in Delaware in order to more successfully meet national quality of care standards for perinatal care.

More information is at www.cdc.gov/mpino

Breastfeeding is a Breastfeeding is associated with decreased risk for infant morbidity and mortality as well as **National Priority** maternal morbidity,¹ and provides optimal infant nutrition. *Healthy People 2020*² establishes breastfeeding initiation, continuation, and exclusivity as national priorities.

Breastfeeding Support in Delaware Facilities

Strengths

Availability of Prenatal Breastfeeding Instruction All facilities (100%) in Delaware include breastfeeding education as a routine element of their prenatal classes.	Prenatal education about breastfeeding is important because it provides mothers with a better understanding of the benefits and requirements of breastfeeding, resulting in improved breastfeeding rates.	
Provision of Breastfeeding Advice and Counseling Staff at 83% of facilities in Delaware provide breastfeeding advice and instructions to patients who are breastfeeding, or intend to breastfeed.	The American Academy of Pediatrics (AAP) recommends pediatricians provide patients with complete, current information on the benefits and methods of breastfeeding to ensure that the feeding decision is a fully informed one. Patient education is important in order to establish breastfeeding.	

Needed Improvements

Appropriate Use of Breastfeeding Supplements Only 33% of facilities in Delaware adhere to standard clinical practice guidelines against routine supplementation with formula, glucose water, or water.	The American Academy of Pediatrics (AAP) and the American College of Obstetricians and Gynecologists (ACOG) Guidelines for Perinatal Care recommend against routine supplementation because supplementation with formula and/or water makes infants more likely to receive formula at home and stop breastfeeding prematurely.
Inclusion of Model Breastfeeding Policy Elements Only 50% of facilities in Delaware have comprehensive breastfeeding policies including all model breastfeeding policy components recommended by the Academy of Breastfeeding Medicine (ABM).	The ABM model breastfeeding policy elements are the result of extensive research on best practices to improve breastfeeding outcomes. Facility policies determine the nature of care that is available to patients. Facilities with comprehensive policies consistently have the highest rates of exclusive breastfeeding, regardless of patient population characteristics such as ethnicity, income, and payer status.
Protection of Patients from Formula Marketing Only 50% of facilities in Delaware adhere to clinical and public health recommendations against distributing formula company discharge packs.	Distribution of discharge packs contributes to premature breastfeeding discontinuation. The ACOG, AAP, American Public Health Association (APHA), and the federal Government Accountability Office (GAO) all identify this practice as inappropriate in medical environments and recommend against it.
Provision of Hospital Discharge Planning Support Only 33% of facilities in Delaware provide hospital discharge care including a phone call to the patient's home, opportunity for follow-up visit, and referral to community breastfeeding support.	The American Academy of Pediatrics (AAP) clinical practice guidelines recommend examination of the newborn by a qualified health care professional within 48 hours of hospital discharge in order to assess breastfeeding. Ensuring post discharge ambulatory support improves breastfeeding outcomes.

Every two years, CDC administers the national Maternity Practices in Infant Nutrition and Care (mPINC) survey to all hospitals and birth centers in the U.S. that provide maternity care.

Data from this survey can be used to establish evidence-based, breastfeeding-supportive maternity practices as standards of care in hospitals and birth centers across the US. Improved care will help meet *Healthy People 2020* breastfeeding objectives and will help improve maternal and child health nationwide.

National Center for Chronic Disease Prevention and Health Promotion

Delaware Summary —2011 mPINC Survey

Survey At each facility, the person who is the most knowledgeable about the facility's Method maternity practices related to healthy newborn feeding and care completes the CDC mPINC survey.

Response 100% of the 6 eligible facilities in Delaware responded to the 2011 mPINC Survey. Rate Each participating facility received its facility-specific mPINC benchmarking report in October 2012.

Delaware's Composite Quality Practice Score

Delaware's Composite Rank[†]

9

	(out of 100) (out of 53)						
mPINC Dimension of Care	DE Quality Practice Subscore*	Ideal Response to mPINC Survey Question	Percent of DE Facilities with Ideal Response	DE Item Rank [†]			
	70	Initial skin-to-skin contact is ≥30 min w/in 1 hour (vaginal births)	67	13			
		Initial skin-to-skin contact is ≥30 min w/in 2 hours (cesarean births)	40	28			
Labor and Delivery Care		Initial breastfeeding opportunity is w/in 1 hour (vaginal births)	50	34			
Denvery cure		Initial breastfeeding opportunity is w/in 2 hours (cesarean births)	60	13			
		Routine procedures are performed skin-to-skin	17	42			
	85	Initial feeding is breast milk (vaginal births)	67	39			
Feeding of Breastfed		Initial feeding is breast milk (cesarean births)	40	51			
Infants		Supplemental feedings to breastfeeding infants are rare	33	12			
		Water and glucose water are not used	100				
		Infant feeding decision is documented in the patient chart	83	53			
		Staff provide breastfeeding advice & instructions to patients	83	40			
		Staff teach breastfeeding cues to patients	83	31			
Breastfeeding Assistance	87	Staff teach patients not to limit suckling time	40	37			
		Staff directly observe & assess breastfeeding	100				
		Staff use a standard feeding assessment tool	83	4			
		Staff rarely provide pacifiers to breastfeeding infants	50	15			
	88	Mother-infant pairs are not separated for postpartum transition	100				
Contact		Mother-infant pairs room-in at night	100				
Between Mother and		Mother-infant pairs are not separated during the hospital stay	67	10			
Infant		Infant procedures, assessment, and care are in the patient room	0	36			
		Non-rooming-in infants are brought to mothers at night for feeding	80	35			
Facility	57	Staff provide appropriate discharge planning (referrals & other multi-modal support)	33	17			
Discharge Care		Discharge packs containing infant formula samples and marketing products are not given to breastfeeding patients	50	24			
	65	New staff receive appropriate breastfeeding education	0	51			
Staff		Current staff receive appropriate breastfeeding education	17	26			
Training		Staff received breastfeeding education in the past year	83	2			
		Assessment of staff competency in breastfeeding management & support is at least annual	67	9			
	86	Breastfeeding policy includes all 10 model policy elements	50	2			
		Breastfeeding policy is effectively communicated	100				
Structural &		Facility documents infant feeding rates in patient population	83	10			
Organizational Aspects of		Facility provides breastfeeding support to employees	83	8			
Care Delivery		Facility does not receive infant formula free of charge	33	6			
		Breastfeeding is included in prenatal patient education	100				
		Facility has a designated staff member responsible for coordination of lactation care	100				
* Quality Practice scores range from a to soo for each question, dimension of sare facility, and state. The highest hert							

* Quality Practice scores range from o to 100 for each question, dimenstion of care, facility, and state. The highest, best possible score for each is 100. Each facility and state's "Composite Quality Practice Score" is made up of subscores for practices in each of 7 dimensions of care.

† Ranks range from 1 to 52, with 1 being the highest rank. In case of a tie, both are given the same rank.

- State ranks are not shown for survey questions with 90% or more facilities reporting ideal responses.

References

Improvement is Needed in Maternity Care Practices and Policies in Delaware.

Many opportunities exist to protect, promote, and support breastfeeding mothers and infants in Delaware.

Potential opportunities:

- Examine Delaware regulations for maternity facilities and evaluate their evidence base.
- Sponsor a Delaware-wide summit of key decision-making staff at maternity facilities to highlight the importance of evidence-based practices for breastfeeding.
- Encourage and support hospital staff across Delaware to be trained in providing care that supports mothers to breastfeed.
- Establish links among maternity facilities and community breastfeeding support networks in Delaware.
- Implement evidence-based practices in medical care settings across Delaware that support mothers' efforts to breastfeed.
- Integrate maternity care into related hospital-wide Quality Improvement efforts across Delaware.
- Promote utilization of the Joint Commission's Perinatal Care Core Measure Set including exclusive breast milk feeding at hospital discharge in Delaware hospital data collection systems.
