Get the Inside Knowledge

Every woman is different. What is normal for one is not always the same as what's normal for another. That's why it is important to pay attention to what is normal for you and see a doctor if something doesn't seem quite right.

Gynecologic Cancer Symptoms					
Symptoms	Cervical Cancer	Ovarian Cancer	Uterine Cancer	Vaginal Cancer	Vulvar Cancer
Abnormal vaginal bleeding or discharge					
Pelvic pain or pressure					
Abdominal or back pain					
Bloating					
Changes in bathroom habits					
Itching or burning of the vulva					
Changes in vulva color or skin, such as a rash, sores, or warts					

The only cancer the Pap test screens for is cervical cancer. It does not screen for ovarian, uterine, vaginal, or vulvar cancers. So, even if you have a Pap test regularly, see your doctor if:

- You have abnormal vaginal bleeding.
- You have any of the other symptoms listed above for two weeks or longer, and they are not normal for you.

It may be nothing to worry about, but find out for sure. See your doctor and ask about gynecologic cancer. **Get the Inside Knowledge.**
