

SUPPLEMENTARY FIGURE. Estimated percentage of children who received no vaccinations by age 24 months,\* by year of birth<sup>†</sup> -- National Immunization Survey-Child, United States, 2013-2017

**Abbreviations:** CI = confidence interval

\* Vaccination status was assessed before the child reached his/her 24 month birthday.

<sup>†</sup> Estimated linear relationship between year of birth and vaccination status, based on weighted linear regression analysis using the inverse of the estimated variance of each point estimate to construct the weights. Observed percent unvaccinated: 2011 0.9 (0.7-1.1); 2012 1.1 (0.8-1.4); 2013 1.1 (0.8-1.4), 2014 1.2 (0.9-1.5); 2015 1.3 (1.0-1.6). Estimated percentage point change per year: 0.09 (0.05, 0.14).
