

## **2018 provisional data for the United States | Chikungunya virus | CDC**

# **2018 provisional data for the United States**

- Chikungunya virus disease became a nationally notifiable condition in 2015. Cases are reported to CDC by state and local health departments using standard case definitions.
- As of November 27, 2018, a total of 80 chikungunya virus disease cases with illness onset in 2018 have been reported to ArboNET from 22 U.S. states (Table & Map). All reported cases occurred in travelers returning from affected areas. No locally-transmitted cases have been reported from U.S. states.
- A total of three chikungunya virus disease cases with illness onset in 2018 have been reported to ArboNET from U.S. territories (Table). To date, three locally acquired cases have been reported from Puerto Rico.
