*The newly identified CHUVs sequence surrounding Qinghai-Tibet Plateau of China, and have been deposited in GenBank. CHUV, Chuzan virus; seg, segment.

Technical Appendix Figure 1. Cytopathic effects of baby hamster kidney (BHK-21) cells that were inoculated with Chuzan virus (CHUV). (A) BHK-21 cells at fifth passage without CHUV infection. Original magnification $\times 200$. (B) BHK-21 cells at fifth passage infected with CHUV at first passage. The infected cells that exhibited a wrinkled morphology and were detached from the bottom of culture flasks. Original magnification $\times 200$.

Technical Appendix Figure 2 Phylogenetic analysis of CHUV based on viral protein 2 genome sequences of CHUV and other members in Palyam serogroup of genus *Orbivirus* available in August 2017. The phylogenetic tree was constructed by using the neighbor-joining method with MEGA 7.01 software (<http://www.megasoftware.net>). Bootstrap values were calculated with 1,000 replicates. The number on each branch indicates bootstrap values. Black circles indicate the newly identified CHUVs sequence surrounding Qinghai-Tibet Plateau of China, and have been deposited in GenBank (GenBank accession no. MF642326/CHN-GS-16, MF642327/CHN-GS-26 and MF642328/CHN-GS-70). The reference sequences obtained from GenBank are indicated by GenBank accession numbers, strain abbreviations and countries. Scale bar indicates nucleotide substitutions per site. BCV, Bunyip Creek virus; CHUV, Chuzan virus; DAV, D'Aguilar virus.

Technical Appendix Figure 3 Phylogenetic analysis of CHUV based on viral protein 5 genome sequences of CHUV and other members in genus *Orbivirus* available in August 2017. The phylogenetic tree was constructed by using the neighbor-joining method with MEGA 7.01 software (<http://www.megasoftware.net>). Bootstrap values were calculated with 1,000 replicates. The number on each branch indicates bootstrap values. Black circles indicate the newly identified CHUV sequence surrounding Qinghai-Tibet Plateau of China, which have been deposited in GenBank (GenBank accession no. MF642329/CHN-GS-16, MF642330/CHN-GS-26 and MF642331/CHN-GS-70). The reference sequences obtained from GenBank are indicated by GenBank accession numbers, strain abbreviations and countries. Scale bar indicates nucleotide substitutions per site. AHSV, African horse sickness virus; BTV, bluetongue virus; CHUV, Chuzan virus.
