

Vaccinia Virus among Domestic Dogs and Wild Coatis, Brazil, 2013–2015

Technical Appendix Figure. Nucleotide sequence of the vaccinia virus A56R (hemagglutinin) gene found in domestic dogs (green) and wild coatis (purple) compared with homologous sequences of several other orthopoxviruses. Strains containing the conserved deletion region (red) were grouped with other vaccinia viruses (groups 1 and 2) isolated in Brazil.
