Outline

- Pertussis-containing vaccines
- CDC Vaccine Supply Page

Pertussis-containing Vaccines

- Sanofi Pasteur resumed shipping their pertussis-containing vaccines, Daptacel (DTaP), Pentacel (DTaP-IPV-Hib) and Adacel (Tdap) in mid-October 2013.
- While product availability continues to increase, supply will remain constrained over the next several months as inventories rebuild.
- GlaxoSmithKline has taken steps to meet increased demand for pertussis-containing vaccines and anticipates being able to address gaps related to constrained supply, using a combination of products and presentations.
 - However, during this time period, backorders and delays in deliveries may occur related to Tdap vaccine, but are expected to be short in duration. Also, provider preference for vaccine presentation (syringes/vials) may not be able to be accommodated at times during this period.
