WASHINGTON, D. C., OCTOBER 2, 1896.

No. 40.

UNITED STATES.

[Reports to the Supervising Surgeon-General United States Marine-Hospital Service.]

Report of cases of illness among the crew of the Norwegian bark Tenax Propositi at Cape Charles Quarantine.

CAPE CHARLES QUARANTINE, September 23, 1896.

SIR: I have the honor to report that the Norwegian bark Tenax Propositi, twenty-one days out from Cuyo, Mexico, reached this station on the 18th instant, bound for Hamburg, with the dead body of the master on board, 1 sailor in a dying condition, and 3 others sick. master was ill fourteen days, the sailor, who died on the night of the 20th, had been sick twenty-one days. All were taken sick in same way diarrhea, severe abdominal pains, exhaustion, and fever. ered the illness due to some poison in the water taken on at Cuyo. autopsy held on the sailor who died in quarantine revealed ulcers along the course of the cæcum, colon, and rectum, some nearly perforating and having caused an adhesive peritoritis. Liver and kidneys normal; bladder distended with urine, and stomach normal. The bark is now at Fishermans Island with crew ashore, and is being disinfected with Acting Assistant Surgeon Old in charge. On the 21st 2 more of the sailors were taken sick in the same way, with diarrhea and severe abdominal pains.

Very respectfully,

W. J. Pettus, Passed Assistant, Surgeon, U. S. M. H. S.

Cholera notes.

[Translated in this Bureau from the "Veröffentlichungen des Kaiserlichen Gesundheitsamtes," Berlin, September 9, 1896.]

EGYPT.—From August 11 to 17, 2 cholera cases and 9 cholera deaths were reported at Cairo; in the district of Sohag, 19 cases, 39 deaths; in the city of Keneh, 62 cases, 140 deaths; in Tama, 88 cases, 164 deaths. From August 16 to 22, at Alexandria, 32 cases, 26 deaths. From August 15 to 21, in the district of Tanta, 35 cases, 25 deaths; in Kafrel-zayat, 31 cases, 29 deaths; in the city of Rosetta, 3 cases; city of Damietta, 2 cases, 12 deaths; Port Said, 3 cases, 2 deaths; Mit Ghamr, 1 case, 6 deaths; in 40 other districts and cities, 166 cases, 397 deaths. The total number of cholera cases and deaths reported in Egypt up to August 21, is 18,544 and 15,393, respectively; in Alexandria, during the same period, 1,002 cases, 847 deaths.

EAST INDIES—Calcutta.—From July 19 to 25, and from July 26 to August 1, there were, respectively, 5 and 8 deaths from cholera.

Current quarantine measures.

[Translated in this Bureau from the "Veröffentlichungen des Kaiserlichen Gesundheitsamtes," Berlin, September 9, 1896.]

BELGIUM.—By ministerial order of August 27, the measures officially ordered, under date of July 19, 1896, with regard to the importation and transportation of rags and personal clothing, to be applied to all arrivals from the Nile Delta, are no longer in force against all arrivals from Egypt.

BRAZIL.

Sanitary report from Rio de Janeiro.

RIO DE JANEIRO, September 1, 1896.

SIR: I have the honor to transmit the report for the week ended

August 29, 1896:

There were 5 deaths from accesso pernicioso, an increase of 2; 1 from yellow fever, the same as in the foregoing week; 3 from smallpox, an increase of 2; 6 from beriberi and 1 from influenza, none in the foregoing week; 6 from enteric fever, an increase of 4; none from scarlet fever, 1 in the foregoing week, and 47 from tuberculosis, an increase of 18. From all causes there were 265 deaths, an increase of 45.

There is no disease here now considered epidemic; the fluctuations in

the total deaths are usual, and without any specified reason.

Since last report the following-named ships have been inspected and received bills of health from this office: August 26, bark Killeena, Danish, for Apalachicola, Fla; August 28, steamship Mozart, British, for New York, N. Y.; August 29, steamship Milton, British, for New Orleans, La., and steamship Knight, Companion, British, for Galveston, Tex.; August 31, ship Khyber, British, for New York, N. Y., and ship Charles, British, for South West Pass, La.; September 1, bark Premier, Norwegian, for Savannah, Ga.

Respectfully, yours,

R. CLEARY, M. D., Sanitary Inspector, U. S. M. H. S.

CENTRAL AMERICA.

Suspicious fever in Guatemala.

GUATEMALA, September 3, 1896.

SIR: I have to report that there exists in this Republic a great deal of fever. Although it may not be the same as the yellow fever known on the Atlantic Coast of the United States and Mexico, it is none the less fatal, the main difference being the absence of the black vomit. It has been known in this Republic as pernicious fever. For the first time, in last night's Diario, I see 1 death reported as fiebre amarilla, or yellow fever, at Salama. It attacks men, as a rule, and those who are given to drink succumb immediately. The crisis is usually on the third or fourth day.

It is absolutely impossible to obtain any medical statistics whatsoever. I have enjoined strict vigilance on the part of the agents at all the ports as to the bills of health, and hope that nothing will occur to oblige the authorities at San Francisco to establish a quarantine against any of

the ports of this Republic.

I have the honor to be, sir, your obedient servant,

D. LYNCH PRINGLE, United States Consul-General.

Hon. Assistant Secretary of State.

CUBA.

Smallpox and yellow fever in Cuban seaports.

HABANA, CUBA, September 25, 1896.

SIR: There were 224 deaths in this city during the week ended September 24, 1896. Thirty-nine of those deaths were caused by yellow fever, with 42 new cases approximately; 32 were caused by smallpox, with approximately 210 new cases; 6 were caused by enteric fever, 3 by so-called pernicious fever, 4 by paludal fever, 1 by diphtheria, 6 by dysentery, 13 by enteritis, 1 by the grippe, 1 by glanders, 1 by pneumonia, and 41 by tuberculosis. Thirty-five of the 39 deaths during the week from yellow fever occurred in the military hospital, with 30 new cases; the remaining 4 deaths, with 12 new cases, were among civilians in the city. All of the 32 deaths by smallpox, except 1, as well as the new cases, were among civilians. The above deaths from smallpox do not comprise those dying of that disease in Regla, on the opposite side of the harbor, and other towns a few miles away.

Very respectfully, D. M. Burgess, Sanitary Inspector, U. S. M. H. S.

The United States consul at Matanzas reports 29 deaths from yellow fever luring the week ended September 25.

The United States consul at Sagua la Grande reports 10 deaths from yellow fever, with 60 cases, during the week ended September 12, and 50 cases and 8 deaths during the week ended September 19.

Under date of September 21 the United States consul at Cienfuegos reports that during the week ended September 20 there were in that city 9 deaths from yellow fever and 12 from smallpox.

GERMANY.

Statement of acute infectious diseases in the State of Hamburg, Germany.

[Translated in this Bureau from official report.]

SMALLPOX.

Year.	Cases.	Deaths.	Remarks.
1885	31	1	2 groups of the disease were found, both of foreign origin.
1886	77	17	22 cases traced to a strolling musician.
1887		3	11 cases traceable to epidemic of previous year; 1 case imported.
1888	9	Ō	2 cases imported by way of the sea from England and Brazil; 2 cases imported by immigrants.
1889,	2	0	1 case from Brazil; I in person of immigrant.
1890	1	0	Imported from Portugal.
1891		0	Imported from Portugal and Chile.
1892	28	4	1 case from South Germany; 1 from Brazil. The rest of Russian origin. Information by Russian immigrants.
1893	19	3	1 case on steamer arriving from China. The rest of Russian origin, direct or indirect.
1894	6	0	3 cases apparently of Swedish origin. The others not traceable.
1895	3	1	1 case obscure; 1 imported on steamship $\mathit{Mendoza}$ from Brazil. Smallpox on board.

SCARLET FEVER.

Year.	Cases.	Deaths.	Per cent.	Year.	Cases.	Deaths.	Percent.
1886	3, 105	348	11.9	1×91	2, 902	133	4.6
	1, 805	88	4.2	1892	1, 948	145	7.4
	1, 310	74	5.6	1893	2, 000	136	6.8
	1, 552	88	5.8	1894	1, 960	122	6.2
	2, 063	97	4.7	1895	1, 550	114	7.4

MEASLES.

Year.	Cases.	Deaths.	Per cent.	Year.	Cases.	Deaths.	Per cent.
1886	4, 765	166	3.5	1891	1, 242	33	2.7
	2, 384	85	3.6	1892	6, 976	509	7.3
	9, 058	580	6.4	1893	1, 510	59	3.9
	365	17	4.7	1894	7, 764	263	3.4
	5, 651	207	3.7	1895	852	19	2.2

In comparison with the figures of the preceding year the number of cases in 1895 was extraordinarily small. The same is true of the years 1888 and 1889, an epidemic season being followed by a favorable season. It is a striking instance of the tendency of measles to recur in force every sixth year.

WHOOPING COUGH.

Year.	Cases.	Deaths.	Per cent.	Year.	Cases.	Deaths.	Per cent
1872	2,014	227	11.3	1884	1,597	189	11.8
1873 1874		86 178	13.4 15.3	1885 1886	1,240 2,646	154 357	12.
1875		162	17.5	1887	1, 145	125	13.4 10.
1876	1, 166	172	J4.8	1888	1,566	162	10.
1877	1,639	206	12.6	1889	2,274	221	9.1
1878 1879	1,343	249	18.5	1890	1,320	149	11.3
1880	1,524 1,194	199 176	13.1 14.7	1891 1892	1,384 1,885	130 239	9.4 12.7
1881	1,910	230	12.0	1893	1,505	131	8.
1882	1,063	147	13.8	1894	1,307	86	6.6
1883	1,909	251	13.1	1895	2,019	173	8.0

The first half of the year showed only slight prevalence of the disease. During the last half an increase set in which continued to the close of the year.

DIARRHEA AND CHOLERA MORBUS.

Year.	Cases.	Mortality per 1,000 inhabitants.	Year.	Cases.	Mortality per 1,000 inhabitants.
1886	1,716 1,761 919 1,721 859	3.3 3.3 1.7 3.0 1.5	1891	1, 125 5, 307 1, 484 555 702	1.8 8.3 2.3 0.8 1.0

Although during the past year cholera has been more certainly extinct than even in 1894, no case having been reported throughout the empire during the entire year, several cases of severe cholera morbus came under the observation of attending physicians. No cholera vibrions were found in any case.

TYPHOID FEVER.

Year.	Cases.	Deaths.	Year.	Cases.	Deaths.
1886	4, 165 6, 839 3, 453 3, 405 1, 696	368 467 295 243 160	1891 1892 1893 1894	1, 295 2, 102 1, 195 560 808	147 216 115 47 72

The increase in the number of cases in 1895 over that of the preceding year is to be attributed partly to the considerable diffusion of the disease in Cuxhaven and partly to extensive infection of milk, which was observed in August and September.

TYPHOID IN ALTONA.

Year.	Cases.	Deaths.	Year.	Cases.	Deaths.
1886	687	77	1891	979	90
	1, 113	71	1892	665	60
	1, 384	81	1893	283	23
	506	34	1894	164	11
	339	27	1895	145	20

In spite of the considerable decrease in typhus in Altona since 1893, there was a slight transient increase of cases in the beginning of the current year. In 1893 and 1894 the increase showed itself in February; in 1895 in April. The connection between the appearance of the disease and the water supply from the Altona waterworks in Blankenese has been noticed in previous reports.

CEREBRO-SPINAL MENINGITIS.

Year.	Cases.	Deaths.	Year.	Cases.	Deaths.
879	10		1888	9	
880 881	3	3	1890	9	
882 883 884	7		1891	5	
885886	49 14	30	1894	8 28	9
.887	19	14	1090	- 46	

In the yearly report for 1879 this disease was first stated among "typhic fevers."

DIPHTHERIA.

JAPAN.

Report of infectious diseases in Japan.

YOKOHAMA, September 4, 1896.

SIR: I have the honor to forward a report of infectious diseases in Japan for period from August 21 to September 4, inclusive. I beg to call your attention to the magnitude and widespread prevalence of the epidemic of dysentery now in progress. The native authorities are enforcing, in regard to this disease, the regulations for the control of cholera, and with some measure of success.

I am, sir, very respectfully, your obedient servant,
STUART ELDRIDGE, M. D.,
Sanitary Inspector, U. S. M. H. S.

MEXICO.

Sanitary measures in force in Mexico.

[Extract from message of President of Mexico, opening of Congress, September 16, 1896.]

Although Mexico has no direct communication or traffic with Egypt, where the Asiatic cholera prevails to an alarming extent, the Executive has taken suitable precautions to obviate even the remote contingency of our country being invaded by that epidemic, through foreign ships touching at Egyptian ports.

The sanitary conditions of the capital have not changed materially. Comparing the

933 October 2, 1896

mortality of the first half of 1895 with the corresponding period of the present year, it appears that the comparison is unfavorable to the latter. But the increase has been slight, and the same may be said of the cases of mortality from typhus. This disease has not appeared in the epidemic form since 1893, although several cases occurred in the municipal prison in the month of July last. But as care was taken immediately to remove the patients to the Juarez Hospital, and as all the departments of the prison were carefully disinfected, the disease was successfully stamped out.

With the view of diminishing the number of smallpox cases amongst foreigners residing in our country, it was decided to publish, at the suggestion of the superior board of health, an advertisement in the Diario Oficial, inviting the natives of other countries to be vaccinated or revaccinated. It was also decided to distribute a printed warning to the same effect in several languages, among foreigners arriving at the ports or frontier

towns of the Republic.

Considering that the numerous hovels used as dwelling places in certain portions of the city were unfit for that purpose, and did not satisfy the requirements of the sanitary code, the government of the district was instructed to order the removal and destruction of said hovels.

The general regulations for abattoirs in the federal district and territories, under

article 241 of the sanitary code, have been issued.

The service of disinfection is being performed with entire regularity, and certain alterations have been made in the building where the steam disinfector is situated.

STATISTICAL REPORTS.

CUBA—Manzanillo.—Two weeks ended September 15, 1896. Estimated population, 14,000. Total deaths, 35, including yellow fever, 3, and enteric fever, 1.

FRANCE—Roubaix.—Month of August, 1896. Estimated population, 125,000. Total deaths, 236, including 1 from whooping cough.

GREAT BRITAIN—England and Wales.—The deaths registered in 33 great towns of England and Wales during the week ended September 12, correspond to an annual rate of 15.8 a thousand of the aggregate population, which is estimated at 10,846,971. The highest rate was recorded in Liverpool, viz, 23.1, and the lowest in Derby, viz, 8.7 a thousand.

London.—One thousand two hundred and fifty-one deaths were registered during the week, including measles, 12; scarlet fever, 18; diphtheria, 48; whooping cough, 31; enteric fever, 14, and diarrhea and dysentery, 61. The deaths from all causes correspond to an annual rate of 14.8 a thousand. In greater London 1,644 deaths were registered, corresponding to an annual rate of 13.9 a thousand of the population. In the "outer ring" the deaths included 10 from diphtheria, 5 from measles, and 5 from whooping cough.

Ireland.—The average annual death rate represented by the deaths registered during the week ended September 12 in the 16 principal town districts of Ireland was 21.1 a thousand of the population. The lowest rate was recorded in Wexford, viz, 0.0, and the highest in Armagh, viz, 28.0 a thousand. In Dublin and suburbs 146 deaths were registered, including scarlet fever, 2; enteric fever, 5; whooping cough, 6.

Scotland.—The deaths registered in 8 principal towns during the week ended September 12 correspond to an annual rate of 15.9 a thousand of the population, which is estimated at 1,518,347. The lowest mortality was recorded in Paisley, viz, 12.8, and the highest in Perth, viz, 20.5 a thousand. The aggregate number of deaths registered from all causes

was 465, including scarlet fever, 10; diphtheria, 4; measles, 14, and whooping cough, 6.

West Indies—Guadaloupe.—August 16 to 31, 1896. Estimated population, 18,500. Total deaths, 14. No deaths reported from contagious diseases.
