News for Readers of Public Health Reports

The Superintendent of Documents of the Government Printing Office has increased the subscription price of the journal effective in spring 1993. Subscriptions are now \$13 a year for six issues for domestic subscriptions and \$16.75 for foreign subscriptions. A subscription order form is on page 304 of this issue. The price of a single copy sold by the Superintendent of Documents is \$6.50 for domestic purchasers and \$8.13 for foreign purchasers.

Although the subscription price has gone up, the journal of the Public Health Service continues to be relevant and useful to public health workers for a bargain price.

In this issue of *Public Health Reports* is a report on a lookback investigation of patients treated by an HIV-infected dentist. The authors are Paul M. Arnow, Teresa Chou, Robert Shapiro, and Elliot J. Sussman.

Also in this issue are two articles on water safety. They are "Fatal Incident Risk Factors in Recreational Boating in Ohio," on page 340, by Peter J. Molberg, Richard S. Hopkins, John Paulson, and Robert A. Gunn; and "Risk Factors for Drowning and Near-Drowning Among Children in Hillsborough County, Florida," by Karen D. Liller, Ellen B. Kent, Christine Arcari, and Robert J. McDermott. Recreational boating and swimming are major health risk activities, particularly for the young. These articles provide a public health approach to some largely avoidable causes of injury and death.

The next issue of *Public Health Reports*, July-August, provides a discussion of President Clinton's initiative to improve the delivery of childhood immunizations. The focus of the initiative is to improve access to immunization services, eliminate financial

barriers to age-appropriate immunization, and to facilitate the development of a national immunization tracking system.

Also in that forthcoming issue, two articles describe the success of special immunization efforts. Michael Davidson, of CDC's National Center for Infectious Diseases, provides information on high rates of vaccination against pneumococcal disease achieved in a remote high-risk Alaska Native population. Paul Stehr-Green, of CDC's National Center for Prevention Services, describes an evaluation of computergenerated telephone reminders to improve immunization levels in inner-city clinics.

Other articles will deal with such subjects as evaluation of a two-dose measles-mumps-rubella vaccination schedule among college athletes, a rubella outbreak among the Amish of northeastern Ohio, correlates for stroke risk in Florida, youth access to alcohol, increasing breast and cervical cancer screening at local health departments, fatal occupational injury, and deaths among the homeless in Georgia.

Such high interest subjects are treated in *Public Health Reports* as part of a Public Health Service communications effort to try to ensure that successful public health practice does not remain in the laboratory or fail to go beyond the provinces of the policy makers. The best technology and the best intentions are for nothing if they are not in the minds and the hands of public health workers, practitioners, and students of the health professions throughout the country.

Public health practice is more than technology and policy, however. It is motivation and know-how among those in the field. We think that is where *Public Health Reports* comes in.

INFORMATION FOR CONTRIBUTORS TO PUBLIC HEALTH REPORTS

Public Health Reports is the journal of the U.S. Public Health Service, published six times a year by the Department of Health and Human Services. Its readership includes the public health community at large, both in the United States and abroad, at the local, State, and national levels, in the public and private sectors.

The journal is interested in scientific papers concerned with the many facets of health care, disease prevention, health promotion, medical care, community medicine, and the delivery of health services, as well as technical reports documenting studies and research. Papers on new programs, new projects, and new ideas, even when they are experimental in nature, are welcomed. Letters to the editor commenting on specific articles published in the journal are encouraged.

Public Health Reports articles are abstracted in various journals, such as Abstracts for Social Workers, Current Literature in Family Planning, and so on. They are indexed in the annual Cumulated Index Medicus and monthly Index Medicus of the National Library of Medicine and the Cumulative Index to Nursing and Allied Health Literature. The full text of articles is available on the MEDIS data base; synopses are available on the GTE Telenet Medical Information Network.

All manuscripts are considered with the understanding that they have not been submitted for publication elsewhere. Almost all papers are reviewed by technical experts in government and the private

sector. Comments of the referees are made available to the authors.

Manuscripts are published in one of the three formats: as general articles that usually do not exceed 15-20 double-spaced typewritten pages, exclusive of charts and tables; as "Public Health Reports in Brief" that are less formal, of shorter length, and of slightly less significance; or as items that qualify as news, announcements, or abbreviated descriptions of programs or projects.

Papers, including the list of references, should be typewritten double spaced, with the title and authors' names and affiliations on a separate sheet. They should have no more than six authors. All charts and tables should be on separate sheets. If a paper is accepted for publication, we will request a 5.25- or 3.5-inch IBM PC-type diskette of the article stored in a word processor file, formatted in MS DOS. (A pure ACSII text file or a XyWrite III Plus file is preferred, but we are able to convert files of about 20 major word processors.)

More detailed instructions on journal style, reference citations, and format can be obtained on request. All inquiries should be addressed to:
