

Public Health Reports

Treasury Department, United States Marine-Hospital Service. Published in accordance with act of Congress approved February 15, 1893.

VOL. XII. WASHINGTON, D. C., DECEMBER 17, 1897. No. 51.

UNITED STATES.

Instructions relative to post-epidemic disinfection.

TREASURY DEPARTMENT,
OFFICE OF THE SUPERVISING SURGEON-GENERAL,
MARINE-HOSPITAL SERVICE,
Washington, D. C., December 1, 1897.

SIR: You are hereby placed in charge of post-epidemic disinfection and aeration on the part of the Marine-Hospital Service at all places in the State of Mississippi where yellow fever has appeared during the past summer and fall. A list of said places is herein inclosed (inclosure No. 1). In addition to these specified places, it should be your duty, by inquiry and other means within your power, to ascertain if yellow fever has existed in any other locality, however remote, and to visit said places and carry out these instructions. (See PUBLIC HEALTH REPORTS, December 3, 1897.)

The measures to be enforced are enumerated in the inclosed memorandum regarding post-epidemic disinfection and house aeration (Inclosure No. 2). (See PUBLIC HEALTH REPORTS, December 3, 1897.)

Hospital Steward Cragg, who has had yellow fever, has been ordered to report to you to assist you in these duties. He will be of service in keeping records and accounts, and in any other manner which you may direct.

On arriving in a given municipality or township you will immediately call upon the mayor and the health authorities and secure their cooperation. You should inform them that in view of the large amount of work to be accomplished it is absolutely necessary that the expenses therefor should be borne, so far as possible, by the local authorities, and it is the purpose of the Marine-Hospital Service only to meet such expenses as are absolutely necessary, upon certification by the proper health authorities. In some localities it is obvious that part of the work may be done and paid for by the local authorities, but that it will have to be supplemented by the Service assuming a portion thereof.

A list of every house in which there has been yellow fever, and a list

also of houses where there have been cases of suspected fever, should be obtained, and the work then should be prosecuted systematically. The importance should be insisted upon of both disinfection and aeration. With regard to disinfection, all of the known agents should be used as required in special cases. Steam disinfection of mattresses and clothing may be required and for this purpose you are authorized to have the steam disinfecting chamber placed on a flat car rented for the purpose and carried through the desired localities. Should this apparatus be considered insufficient for the work required at any given place, recommendation should be made for the construction of a steam disinfecting car such as was in use at the detention camp at Waynesville in 1893. It is not unlikely that it will be found necessary to burn some mattresses and possibly some clothing. In this event it is suggested that arrangements be made, either at Camp Hutton, Fontainebleau, or Mount Vernon Barracks, for the shipment of mattresses which are practically new to any desired point, for the purpose of replacing those which are burned and which belong to people who are unable to stand the loss.

You will make report from each town visited and disinfected at the close of the work at that place, and reporting the next place to be visited. It is suggested that in some places visited there may be need of some professional help, and should this be the case the best local talent should be secured, and nominations for his appointment for temporary service should be duly reported to the Bureau, with rate stated.

It is suggested that inasmuch as it is necessary for you to visit Vicksburg, Jackson, and Meridian before proceeding on this duty, said duty might begin at Edwards and adjacent towns.

Respectfully, yours,

WALTER WYMAN,
Supervising Surgeon-General, U. S. M. H. S.

Passed Assistant-Surgeon J. H. WHITE,

U. S. Marine-Hospital Service, New Orleans, La.

[Reports to the Supervising Surgeon-General United States Marine-Hospital Service.]

Additional cases of yellow fever at Flomaton.

MOBILE, ALA., December 13, 1897.

SIR: I have the honor to report that 1 case of yellow fever occurred at Flomaton on December 1 (Respero) and 1 on December 4 (Ragan) and that 1 death (Ragan) occurred there to-day. Referring to my telegram of November 16 from Flomaton and the list of yellow fever cases in the PUBLIC HEALTH REPORTS, I have to state that the record for Flomaton should now read: Cases, 98; deaths, 5. To the death list, in fact, there should be added 1 (McCurdy), who died on November 10, but was finally diagnosed as "typhoid fever," when the case was evidently ptomaine poisoning following yellow fever.

I am, very respectfully, your obedient servant,

R. D. MURRAY,
Surgeon, U. S. M. H. S.

Yellow fever in the United States as reported to the Supervising Surgeon-General United States Marine-Hospital Service to December 8, 1897. (a)

BRAZIL.

*Sanitary report from Rio.*RIO DE JANEIRO, *November 15, 1897.*

SIR: I have the honor to transmit the report for the week ended November 13, 1897:

There were 5 deaths from *accessio pernicioso*, a decrease of 1; none from smallpox, 1 in the foregoing week; 6 from beriberi, an increase of 5; 2 from enteric fever, an increase of 2; 1 from whooping cough, none in the foregoing week; 61 from tuberculosis, an increase of 16, and 286 from all causes, an increase of 46. I think the large increase in the number of deaths is due to the increased number from pulmonary diseases, including tuberculosis, caused by the very unseasonable weather we are having. Another result is the almost disappearance of yellow fever.

Since last report the following-named ships have been inspected or received bills of health from this office: November 9, ship *Columbus*, Russian, for Sapelo Sound, Ga.; bark *Guiseppa Pignone*, Italian, for Pensacola, Fla.; bark *Lancefield*, British, for Savannah, Ga. November 10, steamship *Amalfi*, German, for New York from Santos. November 11, steamship *Kaffir Prince*, British, for Pernambuco. November 12, steamship *Bellanoch*, British, for New York. November 13, bark *Kelverdale*, British, for Sandy Hook, N. Y.

Respectfully, yours,

R. CLEARY, M. D.,

Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,

U. S. Marine-Hospital Service.

CUBA.

Smallpox and yellow fever in Cuban seaports.

December 7: The United States consul at Cardenas reports that during the week ended December 4 there was in that city no death from yellow fever and no death from smallpox.

December 6: The United States consul at Cienfuegos reports that during the week ended December 5 there was in that city no death from yellow fever and 1 death from smallpox.

December 11: The United States sanitary inspector at Habana reports that during the week ended December 9 there were in that city 6 deaths from yellow fever and 6 deaths from smallpox.

December 10: The United States consul at Matanzas reports that during the two weeks ended December 8 there was in that city 1 death from yellow fever.

December 9: The United States sanitary inspector at Habana reports that during the week ended December 9 there were in the city of Regla 3 deaths from yellow fever.

December 6: The United States consul at Sagua la Grande reports that during the week ended December 4 there were in that city 5 cases of yellow fever and 33 cases and 8 deaths from smallpox.

December 4: The United States sanitary inspector at Santiago

reports that during the two weeks ended December 4, there were in that city 3 deaths from yellow fever.

HABANA, CUBA, *December 7, 1897.*

SIR: I have the honor to transmit the following report of this office for the month of November, 1897. Sanitary Inspector Burgess was taken sick on November 5, when I assumed temporary charge and have conducted the service to date.

The sanitary conditions of the city are unchanged and the death rate has steadily increased each month, for while the deaths from yellow fever and other diseases prevailing during the warm, rainy season have decreased, on the other hand intestinal diseases, enteric fever, and smallpox have shown a higher mortality. The number of deaths from yellow fever have steadily decreased since the middle of the summer, the decrease being due, first, to the establishment of military hospitals outside of infected towns, and later on the decrease has been due to the cool weather, or rather a temperature below 70°.

Enteric fever does not seem to exist to any extent beyond the limits of the military hospitals, but it appears to be very fatal in those institutions. The deaths from malarial fevers have also increased, and I notice that the term "tifus malaria" of late has occurred often in the mortuary records. This term is applied to that form of malarial fever designated in the United States as "typho-malarial."

There is no diminution in the deaths from enteritis, dysentery, and diarrhea, and in fact the deaths from enteritis in the military hospitals are increasing so rapidly that I have felt it was due to some cause not heretofore existing.

It is evident that the contracted food supply has at last reached that point where no food stuffs are delivered without immediate payment. There has been no recent influx of reconcentrados, and of the remaining persons it may be said that their condition is somewhat improved, although the streets are still filled with these people who invariably present a half starved condition. Smallpox is increasing, not rapidly, but enough to warrant a recommendation that vaccination at this office be kept up during the winter months. Beriberi, confined to the Chinese population up to a short time ago, is said to exist to some extent among the natives of the lower class, but I have not observed the disease except among the Chinese.

It may be well to mention that the disease is reported as spreading in Matanzas; this I learn from a fairly reliable source. It will be seen that 2 deaths from leprosy occurred during the past month. These deaths did not occur in the lepers' hospital, but at private residences, and it is no unusual sight to see lepers on the streets. The harbor work has increased over the preceding months, and has kept Assistant Sanitary Inspector Dudley on the harbor several hours daily. It often occurs that notice is given this office of the immediate sailing of vessels, when a bill of health is prepared and signed by the consul, and an inspection made of the crews and vessels, only to discover that the vessels would not be ready to proceed to sea, and in some cases their departure would be delayed two or three days, which would necessarily call for that many inspections.

The following table will show the movement of vessels :

Class.	Ameri- can.	Brit- ish.	Span- ish.	Colum- bian.	Nor- wegian.	Ger- man.	Total.
Steamships	22	7	12	3	2	2	48
Tugboats	3		2				5
Barks	1						1
Barkentines	1						1
Schooners	8						8
Total	35	7	14	3	2	2	63

Passengers	299
Crews	2,065

Total persons inspected 2,364

I would again report that the steamships of the Spanish line plying between this port and New York are not observing the regulation regarding certificates from this office.

It is enforced with American citizens, so far as I can observe, but it is not considered a necessity for other persons to obtain them, and this condition of affairs is exemplified with the sailing of every steamer.

While the danger of yellow fever appearing at a port in the United States may be past, there is still danger from smallpox, and I would recommend that the regulation covering the ground be enforced. During the month of December there will be an exodus of Cubans to the Florida ports, and I will persist in vaccination and revaccination in every instance where it is needed, as this class of passengers always requires close watching.

Very respectfully,

W. F. BRUNNER,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

Sanitary report from Habana.

HABANA, CUBA, *December 11, 1897.*

SIR: I have the honor to submit the following report for the week ended Thursday, December 9, 1897, with the table of mortality for the period stated. The temperature has been lower during the past week than at any other time during the present season, and no rain has fallen, giving a dry atmosphere.

The number of deaths from yellow fever has decreased with the cool weather, but there appears to be marked diminution of cases and deaths from enteric fever. Malarial fevers still furnish the summer quota of deaths; in fact, there are more deaths from these fevers now than there were during the rainy season.

Smallpox continues to increase, and will do so during the present winter. From the mortality table it will be noticed that there were 6 deaths from that disease; of that number but 1 occurred in the military hospitals.

There is a civil hospital, called the Quinta del Rey, which furnishes a large per cent of the deaths occurring from this disease.

Intestinal diseases show a slight decrease in comparison with the past few weeks. The total deaths have decreased also, but I do not believe the death rate will continue to show any marked diminution, even though the official reports should so present it, as the conditions are nearly all present now that have existed for months.

The harbor work is still heavy. Many vessels are now leaving this harbor for the United States. The cattle business with Florida has been almost finished. The trade seems to have been diverted from Florida to New Orleans and Galveston, evidently on account of the bad condition of the Florida cattle on arrival here.

The Morgan line of steamers from New Orleans has sent 3 steamers within the past ten days, while there is a steamer from Galveston once every five days. The vessels from Galveston bring cotton in their lower holds, and after discharging their cargo of cattle proceed to New York and Boston.

The New Orleans steamers having cattle discharge them at one of the Regla wharves, but do not remain at said wharf any longer than two hours, going out into the stream as soon as the cattle are removed from the ship.

Inquiries are being made about the storing of sugar, preparatory to its shipment to the United States, and I have advised parties so interested not to place the material in any warehouse which has been used as a military hospital at any time during the present war.

It appears to be the belief that more sugar will be made this year than last.

Shippers of horsehair, glue stock, and other kindred material, all

of which will go either to Philadelphia or New York, wish to begin shipments during the present month.

Very respectfully,

W. F. BRUNNER,

Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,

U. S. Marine-Hospital Service.

Sanitary reports from Santiago.

SANTIAGO DE CUBA, *November 27, 1897.*

SIR: I have the honor of submitting the following report on the sanitary condition of Santiago de Cuba for the week ended November 27:

There were 60 deaths noted, of which 2 were from yellow fever, 4 from dysentery, 5 from tuberculosis, 1 from pernicious and 3 from remittent fevers, 6 from enteritis, 15 from anæmia with dropsy, the rest from non-contagious diseases.

The fact that the government is issuing rations to the poor and "concentrados" has somewhat improved the general health, and beggars are less exacting on the streets and at the house doors. Great numbers of anæmic and dropsy cases still exist in the town and at the hospitals, but I expect that with the new political régime just established, and with the help of the government, the poorer classes will suffer less, both physically and morally.

Respectfully,

H. S. CAMINERO, M. D.,

Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,

U. S. Marine-Hospital Service.

SANTIAGO DE CUBA, *December 4, 1897.*

SIR: Sixty-seven deaths have been recorded this week, and the slight increase in the mortality is due to pulmonary complaints, very common just now, owing to the sudden changes of the temperature. There has been 1 death from yellow fever, 7 from tuberculosis, 2 from dysentery, 3 from pernicious and 1 from remittent fever, 4 from enteritis, 4 from pneumonia, 9 from dropsy; the rest from common diseases, acute and chronic, of noncontagious character. There are very few cases of yellow fever among the soldiers at present, and these are generally of a mild

character. Catarrhal affections of the respiratory organs are very common, and cases of grippe prevail to some extent.

Respectfully,

H. S. CAMINERO, M. D.,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

JAPAN.

Sanitary report from Yokohama.

YOKOHAMA, *November 9, 1897.*

SIR: I have the honor to forward herewith my regular report on infectious diseases in Japan for period October 29 to November 8, inclusive. I beg to invite your attention to the continued prevalence of epidemic dysentery, notwithstanding the low temperature of the present season.

I am, sir, very respectfully, your obedient servant,

STUART ELDRIDGE, M. D.,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

a No report.

Vessels inspected at Yokohama during September and October.

OFFICE SANITARY INSPECTOR,
MARINE-HOSPITAL SERVICE,
Yokohama, Japan, November 20, 1897.

SIR: I have the honor to report that during the months of September and October just passed I inspected vessels as follows, all being apparently free from infection:

Vessels inspected and free from infection.

Date.	Steamer or vessel.	Destination.
Sept. 4	American steamship City of Peking	San Francisco via Honolulu.
Sept. 11	British steamship Energia	New York via ports.
Sept. 14	British steamship Doric	San Francisco via Honolulu.
Sept. 18	British steamship Victoria	Tacoma via Victoria.
Sept. 21	British steamship Glenfarg	Tacoma.
Sept. 23	Japanese steamship Kinshiu Maru	Seattle.
Do.....	Hawaiian steamship China	San Francisco via Honolulu.
Sept. 27	British steamship Cromartyshire	Portland, Oreg.
Oct. 2	British steamship Belgic	San Francisco via Honolulu.
Oct. 4	British sailing vessel H. D. Troop	Tacoma.
Do.....	British steamship Braemar	Portland, Oreg.
Oct. 5	British steamship Macduff	New York via ports.
Do.....	British steamship Glenericht	Tacoma (reinspected 9th).
Oct. 9	British steamship Olympia	Tacoma.
Do.....	Japanese steamship Riojun Maru	Seattle.
Oct. 10	American steamship Peru	San Francisco via Honolulu.
Oct. 14	British steamship Flintshire	Portland, Oreg.
Do.....	British sailing vessel Lord Wolseley	Port Townsend.
Oct. 19	British sailing vessel Selkirkshire	Portland, Oreg.
Oct. 20	American sailing vessel T. H. Allen	New York via Kobe.
Oct. 21	British steamship Coptic	San Francisco via Honolulu.
Oct. 22	British sailing vessel Thetis	Portland, Oreg.
Oct. 25	British steamship Mogul	Do.
Oct. 30	American steamship Rio de Janeiro	San Francisco via Honolulu.

I am, sir, very respectfully your obedient servant,

STUART ELDRIDGE, M. D.,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

STATISTICAL REPORTS.

BAHAMAS—*Dunmore Town*.—Two weeks ended December 3, 1897. Estimated population, 1,472. No deaths.

Governors Harbor.—Two weeks ended December 4, 1897. Estimated population, 1,500. One death.

Green Turtle Cay—Abaco.—Two weeks ended December 2, 1897. Estimated population, 3,900. No deaths.

BERMUDA.—Two weeks ended December 4, 1897. Estimated population, 15,013. Three deaths. No deaths from contagious disease.

BRAZIL—*Ceara*.—Month of October, 1897. Estimated population, 50,000. Total deaths, 105. No deaths reported from contagious disease.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 33 great towns in England and Wales during the week ended November 27 correspond to an annual rate of 20.2 a thousand of the aggregate population, which is estimated at 10,992,524. The highest rate was recorded in Swansea, viz, 28.6, and the lowest in Cardiff, viz, 11.0.

London.—One thousand seven hundred and ninety-four deaths were registered during the week, including measles, 120 ; scarlet fever, 27 ; diphtheria, 63 ; whooping cough, 35 ; enteric fever, 21, and diarrhea and dysentery, 13. The deaths from all causes correspond to an annual rate of 21.0 a thousand. In greater London 2,273 deaths were registered, corresponding to an annual rate of 18.8 a thousand of the population. In the "outer ring" the deaths included 14 from diphtheria, 22 from measles, 2 from scarlet fever, and 7 from whooping cough.

Ireland.—The average annual death rate represented by the deaths registered during the week ended November 27 in the 23 principal town districts of Ireland was 22.4 a thousand of the population. The lowest rate was recorded in Clonmel, viz, 0.0, and the highest in Newtownards, viz, 39.7 a thousand. In Dublin and suburbs 170 deaths were registered, including enteric fever, 12, and scarlet fever, 3.

Scotland.—The deaths registered in 8 principal towns during the week ended November 27 correspond to an annual rate of 19.5 a thousand of the population, which is estimated at 1,549,907. The lowest mortality was recorded in Leith, viz, 14.5, and the highest in Greenock, viz, 25.4 a thousand. The aggregate number of deaths registered from all causes was 581, including measles, 10 ; scarlet fever, 12 ; diphtheria, 5, and whooping cough, 23.

SPAIN—*Barcelona.*—Month of September, 1897. Estimated population, 440,000. Total deaths, 337, including smallpox, 8 ; phthisis pulmonalis, 135 ; enteric fever, 54 ; diphtheria, 21, and measles, 1.
