

Public Health Reports

Treasury Department, United States Marine-Hospital Service. Published in accordance with act of Congress approved February 15, 1893.

VOL. XIII.

WASHINGTON, D. C., JULY 8, 1898.

No. 27.

UNITED STATES.

[Reports to the Supervising Surgeon-General United States Marine-Hospital Service.]

Yellow fever in Mississippi.

(Continuation of report from June 30, contained in the preceding issue.)

July 1: No new cases; status unchanged. No illness in refugee camp.

July 2: Situation unchanged. Disinfection continues.

July 3: No new cases.

July 4: No new cases. Four convalescents, 1 under treatment. Purchased 1 house and burned it, as it was too open to thoroughly disinfect it. All convalescents moved to new tents and the old tents disinfected by steam. The McHenry foci now reduced to 1 case in 1 tent. No new cases. It is determined to narrow the quarantine limits the end of the week. The coast from New Orleans to Mobile is free from infection.

July 5: No new cases; only 1 case under treatment. No illness of any kind. Disinfection of houses progressing rapidly.

July 6: No new cases; 1 under treatment. Steam disinfection continues.

Smallpox in Alabama and Mississippi.

MOBILE, ALA., July 1, 1898.

SIR: I have the honor to report that two colored females suffering with smallpox were sent from this city to the pesthouse to-day.

Two cases are reported for the past week in Wayne County, Miss., 5 miles from Shubuta. One case is reported at State Line, Miss. Cases are reported at Chicora, Miss.

I am, very respectfully, your obedient servant,

R. D. MURRAY,
Surgeon, U. S. M. H. S.

Report of cases of smallpox in New York State.

ROCHESTER, N. Y., June 29, 1898.

SIR: We have in the city of Rochester 3 cases of smallpox. They came here from Dansville, N. Y. Other cases of smallpox in this State have been reported in Dansville, Ithaca, Fredonia, Dunkirk, Geneva, and elsewhere. The cases in Rochester were reported to the secretary of the State board of health.

Yours, respectfully,

GEORGE W. GOLER, M. D.,
*Health Officer.**Additional report on variola in Fredonia, N. Y.*

FREDONIA, N. Y., June 27, 1898.

SIR: I have to report that about April 28 last a traveling troupe was here which was afterwards said to have been infected with smallpox. About May 9, 2 cases developed of what was diagnosed as chicken pox and about two weeks later 2 more cases in the same families came down with the same disease; later 3 new cases appeared, I think, in the same families.

About June 21 it appeared in a new place and was the first case reported to this board as suspicious. We immediately telegraphed the State board of health to send us an expert to determine the character of the disease. This they failed to do. Immediately we telegraphed to Dr. Wende of the board of health in Buffalo to come. He came the same day and pronounced it smallpox.

We had previously quarantined all suspects and have placed a guard at each house. There have been no new cases since June 23 and no new places since June 21. The disease is confined to 5 places and since May 9 we have had 13 cases. One has been discharged cured and 5 more are ready for disinfection. We are requiring vaccination and have taken all precautions against the spread of the disease.

Very truly,

HORACE P. PERRIN,
*Clerk.**Arrival of wounded soldiers at Key West.*

KEY WEST, FLA., July 6, 1898.

Three hundred wounded arrived yesterday from Siboney and were taken to the general hospital. No infectious diseases reported among them.

GUITERAS,
Passed Assistant Surgeon, U. S. M. H. S.

Smallpox in the United States as reported to the Supervising Surgeon-General United States Marine-Hospital Service, January 1 to July 7, 1898.

Reports of States and yearly and monthly reports of cities.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended June 25, 1898, from 77 observers, indicate that intermittent fever and inflammation of bowels increased, and diarrhea decreased in area of prevalence. Phthisis pulmonalis was reported prevalent at 172, measles at 50, scarlet fever at 22, diphtheria at 21, enteric fever at 18, and whooping cough at 18 places.

NEW YORK.—Reports to the State board of health, Albany, from 146 cities, towns, and villages, show a total of 9,748 deaths, including diphtheria, 223; enteric fever, 86; measles, 109; scarlet fever, 113; whooping cough, 112, and 1,127 from phthisis pulmonalis.

The Monthly Bulletin says:

There has been a small decrease in the mortality from the two preceding months, from a daily average of 333 deaths to 315; in May, 1897, the daily average was 300. The death rate was 17.15 against 18.75 in April and 17.00 in May, 1897. The decrease in the number of deaths from April to May is less than usual, there being uniformly in this State a diminution amounting to about 800, this year there being less than 300. The mortality of early life is about the same as customary for both May and April, 27.5 per cent of the deaths occurring under the age of 5 years. There were 900 deaths from zymotic diseases, a number below the average, the two months of May and April being usually nearly identical in these. Scarlet fever is the only one of this class which shows an increase; there were 113 deaths reported from it, only 10 of which occurred outside the maritime district. Diphtheria has further decreased, and the 221 deaths from it are but half the average number for May for the past ten years. Whooping cough is more prevalent than it was a year ago and is generally distributed throughout the State. Other zymotic diseases show no deviation from the average mortality. The most notable occurrence during the month was the importation into this State the last of April of smallpox by a traveling theatrical troupe in which was a mild ambulant case of varioloid contracted in West Virginia, escaping detection until it had visited 20 places; the troupe, which traveled in its own cars and had its own exhibition tent, was arrested May 21 at Geneva and placed in quarantine; cases from its membership or contracted by others have developed at Ithaca, Geneva, Buffalo, Dansville, Locke, Union Springs, West Sparta, Rochester, and recently also at Fredonia and Moravia. All these cases are in quarantine and the further spread is not anticipated; none of them have proved fatal. The mortality from acute respiratory diseases is 300 less than in April and 200 more than in last May, and there is a small increase in deaths from other local diseases over the number of a year ago. Grippe has not caused more than 200 deaths; it has been credited this year with 2,300 deaths, and the current epidemic, commencing in January, is practically ended. The weather during the month was characterized by the average temperature for the State, a moderate excess of rainfall, an unusually small number of clear days, with high relative humidity of the atmosphere, and moderate varying winds.

VIRGINIA—Petersburg.—Month ended June 26, 1898. Estimated population, 25,000; white, 12,000; colored, 13,000. Total number of deaths, 68, white, 22; colored, 46, including phthisis pulmonalis, 5.

Current quarantine measures.

[Translated in this Bureau from the "Veröffentlichungen des Kaiserlichen Gesundheitsamtes," Berlin, June 8, 1898.]

PLAGUE.

TURKEY.—According to advices dated May 19, the quarantine against arrivals from the coast of the Hedjaz between Yambo and Lith has been suspended. Vessels having on board pilgrims returning North shall repair to the lazarettos of Klazamena, Beirut, or Tripolis in Africa and there submit to such measures as the sanitary authorities think proper.

BULGARIA.—By resolution of the sanitary council, May 18, all India is declared infected from April 1, and all vessels and merchandise which left India on or after April 1 are subject to the measures prescribed February 11 and April 4.

In view of the fact that the greater part of importations to Bulgaria from India arrive by way of England, in bulk, it is resolved that all such importations shall be admitted after they have been disinfected at the expense of their owners.

STRAITS SETTLEMENTS.—By proclamation of the Colonial Government of May 5 the harbor of Calcutta is declared infected. All vessels arriving thence shall be subject to a quarantine for a period of nine days from the date of their departure from Calcutta, or from the occurrence of the last plague case, or until released by permit of the sanitary authority.

SMALLPOX.

DANISH ANTILLES.—According to advices of June 3, arrivals from Valencia (Venezuela) are subject to fifteen days' quarantine on account of smallpox. Quarantine for arrivals from Jamaica is suspended.

CUBA.

Hospital reports of the Juragua Mining Company, Limited, and statement of the rainfall in Cuba during the period 1889 to 1897.

CUBA, June 27, 1898.

SIR: In response to your telegrams of this afternoon, I inclose herewith a press copy of a statement of the rainfall in Cuba furnished by me to the State Department April 15 last, and also a detailed statement of weather observations recorded at our mining village, Firmeza, month by month, for the years 1889 to 1897, both inclusive.

The report will sufficiently explain itself, but I beg to call your attention, first, to the minimum temperature given for the past two years, showing the lowest average point for the month that the thermometer goes during the night; and second, to the phenomenally heavy rainfall in October of last year, being by far greater than any year since our records were kept, and, as a matter of fact, in one day (October 20) we had a fall of 14 inches.

Very respectfully, yours,

JOSIAH MONROE,
Secretary and Treasurer.

The Juragua Iron Company, Limited—Weather observations taken at Firmeza, mining village of the company, located about 16 miles east of the city of Santiago de Cuba, and about 5 miles inland from the Caribbean Sea. It is among the mountains, and about 500 feet above sea level.

Months.	Temperature.					Mean daily temperature.	Rain in inches.	Days sunshine.	Days cloudy.	Total rainfall for year in inches.

PHILADELPHIA, PA., June 28, 1898.

SIR: I inclose herewith for your information, or that of any Department of the Government to which it may be of value and to which you may refer it, copy of our hospital reports for the past eight years.

These reports will sufficiently explain themselves, but I would especially call your attention to the yellow fever columns, from which you will note that in the eight years we have had two epidemics of yellow fever, the first and most serious beginning in November, 1890, and continuing a full year, with result of 285 cases, of which 106 died, equal to 37 per cent. The first cases of this epidemic were brought directly from

Puerto Rico by immigrant workmen from Spain who, in the course of transshipment and delay of several days in Puerto Rico, contracted the disease there.

The second epidemic of consequence begun in June, 1895, and continued for seven months, with a total number of cases of 110 and 47 deaths, equal to 43 per cent. This epidemic was general in and about the region of Santiago de Cuba, and arose from the large numbers of unacclimated Spanish soldiers brought into the province about that time, and more directly from their insufficient diet and general unsanitary conditions of camp life.

Very respectfully, yours,

JOSIAH MONROE,
Secretary and Treasurer.

DENMARK.

Quarantine procedures.

LEGATION OF THE UNITED STATES,
Copenhagen, June 8, 1898.

SIR: I have the honor to report that on the 12th ultimo the Government of the Danish West Indies declared a quarantine of fifteen days against ships arriving from Valencia, Venezuela, owing to the appearance of smallpox at that port, and that on the same date it revoked the quarantine established in October last against ships arriving from Jamaica.

I have the honor to be, sir, your obedient servant,

LAURITS S. SWENSON.

Hon. SECRETARY OF STATE.

JAPAN.

Report of infectious diseases.

YOKOHAMA, JAPAN, *June 6, 1898.*

SIR: I have the honor to forward herewith my regular report of infectious diseases in Japan for period May 20 to June 5.

With regard to the sanitary condition of the Empire it may be said that it is generally satisfactory. Almost no cases of choleraic disease are returned, dysentery can scarcely be said to be increasing, and, with the exception of the ever-present danger of the importation of plague from Hongkong or Formosa, the prospects for the summer seem good.

You will observe that the reported number of cases of plague in Formosa is very much less than as shown in my last summary. I am, however, confident that statistics from Formosa are exceedingly inaccurate, erring invariably in a favorable direction.

The steamship *Peru*, of P. M. S. S. line, had a case of plague among her Chinese steerage passengers on arrival at Kobe. The patient was immediately removed to the quarantine hospital, where he died the same night, and the ship served a quarantine practically of nine days' duration.

I am, sir, very respectfully, your obedient servant,

STUART ELDRIDGE, M. D.,
Sanitary Inspector, U. S. M. H. S.

Report of infectious disease in Japan from May 19 to June 5, 1898.

a Case in quarantine from steamship Peru.

TURKEY.

Report on the supposed case of plague in Smyrna.

[Report No. 194.]

CONSTANTINOPLE, June 15, 1898.

The sanitary news from Smyrna concerning the suspected plague case which occurred at the lazaretto of Clazomene is not as appalling as we could have expected. On the 9th instant, a telegram announced that the parotid bubo was less swollen, as well as the maxillary ganglions, though they were sensitive. The inguinal bubo was less swollen and not sensitive. In spite of the amelioration of these symptoms, the patient was in a worse condition. She was prostrated, her pulse was thready, and the tongue dry. The inspector-general of the sanitary service, Dr. Cozzonis, who had been ordered to go to Smyrna, wired on the 10th instant that on his visiting the patient the bubos had nearly disappeared. She had light fever (37.5 C.), 92 pulsations, tongue red, dry, and large, skin yellowish, dry, not spotted, diarrhea dating forty-two days previously. The patient had incontinence of urine, and as a consequence it is impossible to have it analyzed. Her liver was slightly enlarged, at the same time she was suffering from chronic bronchitis.

The above-mentioned sanitary inspector made the diagnosis of chronic gastroenteric catarrh. Two days after, on the 13th, the patient died. Dr. Nicol, one of the late Pasteur's scholars, has made a microscopic examination, in consequence of which we received the following telegram: "*Examen microscopique bacteriologique negatif confirme mon diagnostic clinique.*" (Signed) COZZONIS." As a consequence, it was ordered to give pratique to the pilgrims after they have undergone five days' quarantine. According to a report written by the sanitary physician of Smyrna, dated the 8th instant, the condition of the patient, in spite of her old age (she was 85 years old), was rather satisfactory; intelligence was clear, the evacuations were blackish, and the existence of the parotid bubo dated only three days previously and it was very sensitive. The inguinal bubo was not larger than a small almond. It is stated she was suffering since the Arafat day—that is to say, the 2d day of Bayram.

It is to be hoped that the above-mentioned case was not a plague case. We must agree with the opinion of the sanitary physicians who have examined the patient as well as the bacteriological examinations of Dr. Nicol. But the existence of the bubos on a pilgrim coming from Djiddah, where several plague cases and plague deaths occurred, obliges me not to be very sure that it was not a light case of plague. According to the official statement, the last plague case occurred in Djiddah the 16th of May, but, according to the Russian consul of the latter town, plague cases were occurring many days after that date.

I must not omit to state that I have seen many plague cases of which many (nearly 90 per cent) proved fatal during the epidemics of plague in Mesopotamia in 1875 and 1876. I saw there some plague cases, the symptoms of which were very slight enlargement of one of the lymphatic ganglions with a very light fever or without any fever at all.

Complaints are made to the Ottoman Government that many pilgrims (several hundred) are thronged in Yambo, there awaiting the arrival of steamships in order to embark. Yambo is a seashore city where there is no water to drink. It is easy to fancy the sanitary condition of the poor pilgrims.

In Constantinople public health is rather good. From the 7th to the

12th of June 173 deaths have been registered. Of these 1 was from scarlet fever, 5 from measles, 4 from diphtheria, 1 from smallpox, and 5 from typhoid fever.

SPIRIDION C. ZAVITZIANO,
United States Sanitary Commissioner.

STATISTICAL REPORTS.

AUSTRALIA—*New South Wales—Sydney.*—Month of April, 1898. Estimated population, 417,250. Total number of deaths, 434, including diphtheria, 12; enteric fever, 10; measles, 3, and scarlet fever, 3.

BERMUDA.—Two weeks ended June 17, 1898. Estimated population, 15,013. Total number of deaths, 1.

CHILE—*Antofagasta.*—Month of May, 1898. Estimated population, 14,000. Total number of deaths, 46, including 2 from phthisis pulmonalis.

FRANCE—*Rouen.*—Month of May, 1898. Estimated population, 112,657. Total number of deaths, 250, including enteric fever, 1; measles, 1; whooping cough, 1, and 53 from phthisis pulmonalis.

GREAT BRITAIN—*England and Wales.*—The deaths registered in 33 great towns in England and Wales during the week ended June 18 correspond to an annual rate of 14.7 a thousand of the aggregate population, which is estimated at 11,218,378. The highest rate was recorded in New Castle on Tyne, viz, 22.2, and the lowest in Cardiff, viz, 8.5.

London.—One thousand one hundred and ninety-three deaths were registered during the week, including measles, 50; scarlet fever, 10; diphtheria, 26; whooping cough, 44; enteric fever, 4, and diarrhea and dysentery, 12. The deaths from all causes correspond to an annual rate of 13.8 a thousand. In greater London 1,550 deaths were registered, corresponding to an annual rate of 12.6 a thousand of the population. In the "outer ring" the deaths included 11 from measles, 10 from diphtheria, 3 from scarlet fever, and 11 from whooping cough.

Ireland.—The average annual death rate represented by the deaths registered during the week ended June 18 in the 23 principal town districts of Ireland was 19.6 a thousand of the population. The lowest rate was recorded in Portadown, viz, 0.0, and the highest in Newtownards, viz, 45.4 a thousand. In Dublin and suburbs 147 deaths were registered, including enteric fever, 4, and whooping cough, 1.

Scotland.—The deaths registered in 8 principal towns during the week ended June 18 correspond to an annual rate of 20.2 a thousand of the population, which is estimated at 1,568,536. The lowest mortality was recorded in Paisley, viz, 17.2, and the highest in Perth, viz, 27.2 a thousand. The aggregate number of deaths registered from all causes was 609, including measles, 32; scarlet fever, 8, and whooping cough, 22.
