

Public Health Reports

Treasury Department, United States Marine-Hospital Service. Published in accordance with act of Congress approved February 15, 1893.

VOL. XIII.

WASHINGTON, D. C., AUGUST 12, 1898.

No. 32.

UNITED STATES.

Orders regulating the landing at Florida ports of troops from Cuba.

WAR DEPARTMENT,
ADJUTANT-GENERAL'S OFFICE,
Washington, D.C., August 6, 1898.

SIR: With reference to the previous correspondence on the subject of transportation between the United States and Cuba to prevent yellow fever infection, I have the honor to transmit to you herewith copy of memorandum circular from headquarters division, Seventh Army Corps, dated Camp at Miami, Fla., June 28, 1898, to masters of transport vessels for that port communicating to them certain instructions touching the matter referred to.

Very respectfully,

H. C. CORBIN,
Adjutant-General, for the Secretary of War.

HON. SECRETARY OF THE TREASURY.

HEADQUARTERS DIVISION,
SEVENTH ARMY CORPS,
Camp at Miami, Fla., June 28, 1898.

[Memorandum Circular.]

To masters of transport vessels for the port of Miami, Fla.:

You are absolutely forbidden to bring any refugees from Cuba to this port, and also forbidden to bring any bundles of clothing, baggage, or other merchandise capable of conveying infection which is not strictly military in character. You are required to submit to the regular quarantine examination, and for that purpose you will be detained for inspection, and, if found necessary, for fumigation of vessel. All sus-

pected cases will be detained for observation, and all infected cases held and isolated. All baggage of any and all persons will be disinfected if deemed necessary.

By command of Brigadier-General Schwan :

GROTE HUTCHESON,
Assistant Adjutant-General.

*Orders regulating the embarkation of troops at Santiago for Montauk Point,
Long Island.*

The following orders have been forwarded to Major-General Shafter regarding the embarkation of troops from Santiago for Montauk Point :

WAR DEPARTMENT,
ADJUTANT-GENERAL'S OFFICE, *August 9, 1898.*

Commanding General, Fifth Corps, Santiago de Cuba :

Recommendations of surgeon-generals of Army and Marine-Hospital Service, as follows, should be accomplished as far as practicable :

1. Hold troops assigned to a transport under observation three to five days in separate camp not infected by fever.

2. Surgeons to inspect same twice daily, isolating promptly suspected cases.

3. Bathe and freshly clothe or sterilize old clothing of troops at the beginning of period of observation.

4. When not possible to detain troops in camps under observation, bathe them and freshly clothe or sterilize old clothing before embarkation, excluding, after searching inspection, suspected cases.

5. Yellow fever convalescents or suspects should not accompany healthy troops.

6. No equipage or personal effects capable of conveying infection should accompany troops, unless disinfected by steam or otherwise.

7. Arrange to embark by daylight, under careful supervision of surgeons, who will control sanitary conditions of troop ships en route.

By order of the Secretary of War :

H. C. CORBIN, *Adjutant-General.*

Floating quarantine plant sent to Montauk Point, Long Island.

The Supervising-Surgeon General, United States Marine-Hospital Service, has ordered the recently completed disinfecting barge belonging to the United States Marine-Hospital Service to Montauk Point, Long Island, where it will be utilized for the disinfection of transports arriving from Cuban ports, and for disinfection of baggage, etc. This barge, built and equipped with disinfecting appliances by the Kensington Engine Works, Philadelphia, is constructed of wood, it is 115 feet in length, 27 feet beam, 10 feet, 6 inches depth of hold, and has a draught of 5 feet, 3 inches.

The equipment for disinfection purposes consists of one vertical tubular boiler, 48 inches in diameter, 8 feet 6 inches long, containing 149 tubes 2 inches in diameter and 72 inches long.

There is one steam disinfecting chamber, with jacketed rectangular shell, 4 feet 4 inches wide, 5 feet 4 inches high, with an inside length of 14 feet.

For use with this chamber are two transfer tables, with cars, tracks, etc. In addition to the steam disinfection apparatus, there is a formal-

dehyd generator, and two sulphur furnaces with exhaust fan and engine, a bichloride pump, and bath and wash rooms located on the main deck. This barge has been named the *Protector*.

Officers of the United States Marine-Hospital Service have been detailed to duty at Montauk Point for the inspection and disinfection of the Army transports arriving at that camp.

Sanitary precautions in force with regard to the arrival at Montauk Point, Long Island, of American troops from Cuba.

WAR DEPARTMENT, August 11, 1898.

The Secretary of War directs that you cooperate with Surgeon Magruder, United States Marine-Hospital Service, to establish and fix quarantine grounds and anchorage for transports, bringing General Shafter's command to Montauk Point. As each transport arrives the quarantine officer will board it and raise the yellow flag, make personal inspection of the troops on the transport. If no yellow fever cases are found the sick will be removed to general hospital and the well to detention camp, where they will be held three to five days, and then moved to general camp. If any yellow fever cases are found they will be taken off and either put aboard the sanitary barge or put in yellow fever hospital. Other sick will be moved to general hospital, and the well be detained in the detention camp eight or ten days. No person will be allowed aboard a transport while the yellow flag is up without a written pass of Surgeon Magruder. A revenue cutter has been ordered to Montauk Point to enforce sanitary and quarantine harbor regulations.

H. C. CORBIN,
Adjutant-General, U. S. A.

To GENERAL YOUNG, *Montauk Point, Long Island.*

NOTE.—Adjutant-General H. C. Corbin, United States Army, has notified the general commanding the American Army in Cuba that Surgeon H. R. Carter, United States Marine-Hospital Service, has been appointed sanitary inspector at Santiago.

[Reports to the Supervising Surgeon-General, United States Marine-Hospital Service.]

Smallpox reported prevalent throughout New Mexico.

FORT WINGATE, N. MEX., August 4, 1898.

Smallpox exists to a great extent throughout New Mexico, notably along the line of the Santa Fe Railroad, the direct route from the East to California. No inspection or quarantine of any importance exists.

NICHOLS, *Post Surgeon.*

Smallpox in Tennessee during the month of July, 1898.

NASHVILLE, TENN., August 2, 1898.

SIR: During the month of July there occurred at Cleveland, Bradley County, 12 cases of smallpox, all white; no deaths resulting. The disease at this point is of a very mild character, and difficult of diagnosis. At Memphis there occurred 2 cases within the city, and 1 case without the city limits, all colored, and no deaths resulting, thus making a total of 15 cases, 12 white and 3 colored, in the State for the month.

Very respectfully,

J. A. ALBRIGHT, M. D.,
Secretary and Executive Officer, State Board of Health.

Report of smallpox in Alabama.

MOBILE, ALA., August 6, 1898.

SIR: I have the honor to report that the Louisville and Nashville Railroad Company discontinued the services of G. H. Fonde, M. D., who had been employed for nearly three months on their Montgomery and Mobile division to suppress smallpox, on the 1st instant, in order to permit Dr. Fonde to go to Cuba to care for yellow fever patients. The railroad gangs were rendered practically free from smallpox by having had the disease and by vaccination. Since January, 1897, there have been about 2,500 cases in Lowndes County, including, perhaps, 250 cases at present.

In Butler County the estimate is 300 cases in the same period. The last case at Forrest Home occurred about three weeks ago. There was 1 death in June.

In Lowndes County there were (ten days ago) 25 cases at a point 3 miles from Letohatchie; not many cases at Haynesville; a good many in and about Gordonsville. There have been the following deaths: 2 at Haynesville, 2 at Lowndesboro, 1 at Morganville, and 5 at Gordonsville.

The disease is so light and deaths so few, and the results of vaccination so harsh and painful that the people and some physicians prefer the disease to the preventive.

There is some prospect of a dissemination of the disease and an increase of virulence as the weather becomes colder. * * *

I am, very respectfully, your obedient servant,

R. D. MURRAY,
Surgeon, U. S. M. H. S.

Smallpox in the United States as reported to the Supervising Surgeon-General United States Marine-Hospital Service, January 1 to August 11, 1898.

QUARANTINE REPORTS—Continued.

State and municipal quarantine stations.

[Vessels named only when detained or given treatment at quarantine.]

[illegible]

Reports of States and yearly and monthly reports of cities.

CONNECTICUT—*Hartford*.—Month of July, 1898. Estimated population, 72,000. Total number of deaths, 133, including measles, 1, and phthisis pulmonalis, 12.

New Haven.—Month of June, 1898. Estimated population, 110,000. Total number of deaths, 140, including diphtheria, 3; enteric fever, 1; scarlet fever, 1; whooping cough, 5, and phthisis pulmonalis, 7.

GEORGIA—*Columbus*.—Month of July, 1898. Estimated population, 19,303; white, 10,276; colored, 9,027. Total number of deaths, 27; white, 10; colored, 17, including diphtheria, 1; enteric fever, 2; whooping cough, 2, and phthisis pulmonalis, 7.

ILLINOIS—*Springfield*.—Two weeks ended July 30, 1898. Estimated population, 32,000. Total number of deaths, 20, including phthisis pulmonalis, 2.

INDIANA—*Evansville*.—Month of July, 1898. Estimated population, 70,000. Total number of deaths, 79, including whooping cough, 5, and 5 from phthisis pulmonalis.

MASSACHUSETTS—*Fitchburg*.—Month of July, 1898. Estimated population, 28,392. Total number of deaths, 35, including 3 from phthisis pulmonalis.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended July 30, 1898, from 74 observers indicate that enteric fever, erysipelas, and cholera morbus increased, and influenza, inflammation of kidney, and phthisis pulmonalis decreased in area of prevalence. Phthisis pulmonalis was reported present at 180, enteric fever at 34, measles at 26, scarlet fever at 25, whooping cough at 18, and diphtheria at 13 places.

MINNESOTA—*Winona*.—Month of July, 1898. Estimated population, 22,000. Total number of deaths, 23, including 4 from phthisis pulmonalis.

MISSOURI—*St. Louis*.—Month of June, 1898. Estimated population, 623,000. Total number of deaths, 726, including diphtheria, 5; enteric fever, 7; measles, 4; scarlet fever, 3; whooping cough, 3, and 69 from phthisis pulmonalis.

NEW HAMPSHIRE—*Concord*.—Month of July, 1898. Estimated population, 18,000. Total number of deaths, 33, including 1 from phthisis pulmonalis.

NEW YORK.—Month of June, 1898. Reports to the State board of health, Albany, N. Y., from 152 cities, towns, and villages, for the month of June, 1898, show total of 8,637 deaths, including diphtheria, 174; enteric fever, 70; measles, 99; scarlet fever, 82; whooping cough, 111, and 1,107 from phthisis pulmonalis.

The Monthly Bulletin says:

June is always, next to November, the month of least mortality in this State; with an average daily mortality for the entire year for the past ten years of 320, that of June has been 294. The daily average

for the past month, reported, has been 288, that of the five months preceding having been 325. Compared with the preceding month of May there were 1,100 fewer deaths reported, of which decrease 300 occurred in the maritime district; the death-rate has lessened from 17.15 per 1,000 population to 16.00. There were 130 fewer deaths under five years of age. Aside from diarrheal diseases, there were 100 fewer deaths from zymotic diseases this month. Diarrheal diseases caused 250 more deaths than in May. From acute respiratory diseases there were hardly more than half as many deaths, there having been about 700 fewer than in May, and there were 120 fewer deaths from consumption. Diseases of the digestive organs caused more deaths than in May, but other local diseases show a considerable decrease. Accidental deaths, many of which were from drowning, caused an increase of 100 over May. Fewer deaths from old age occurred this month. Compared with June, 1897, there were fewer deaths in all of the sanitary districts, the maritime district reporting 150 fewer, and in the entire State the reported mortality is less by 400, and by nearly as many is it less than the average of June for the past ten years. A large part of this decrease is in the mortality of early life, and one-half of it is in zymotic diseases. There is also a considerable decrease in acute respiratory diseases. Diarrheal diseases caused 375 deaths, which is but half the usual mortality for June. Diphtheria caused 175 deaths, or 50 less than in May, and one-half that of June, 1897. Whooping cough caused 111 deaths, the same number as in May and double that of last June. Cerebro-spinal meningitis is also very much more prevalent than a year ago, 110 deaths being reported from it, which is excessive, all the sanitary districts reporting it, but the increase is mainly in the maritime district. Consumption shows the usual June mortality, about 1,000 deaths. Smallpox has developed in no new localities since the report of last month. All of the ten reported localities, except Fredonia and Moravia, are believed to be free from the disease, and these are probably soon to be relieved. Of the 50 cases in all, 8 occurred in the troupe importing it; the cases have been generally very mild, no fatality occurring. The mean temperature for the month was one degree above the normal of 66°, the average highest being 90°, lowest 43°; there were ten clear days and a slight deficiency for the State in rainfall, although this was excessive in the eastern part of the State; winds southwesterly.

OHIO—Toledo.—Month of July, 1898. Estimated population, 151,520. Total number of deaths, 129, including enteric fever, 1; scarlet fever, 1; whooping cough, 1, and 7 from phthisis pulmonalis.

PENNSYLVANIA—Williamsport.—Month of July, 1898. Estimated population, 35,000. Total number of deaths not reported. One death from enteric fever and 2 from phthisis pulmonalis.

TENNESSEE—Chattanooga.—Month of July, 1898. Estimated population, 40,000—white, 27,000; colored, 13,000. Total number of deaths, 58—white, 23; colored, 35—including phthisis pulmonalis, 3.

Nashville.—Month of July, 1898. Estimated population, 87,754—white, 54,595; colored, 33,159. Total number of deaths, 123—white, 57; colored, 66—including enteric fever, 2, and phthisis pulmonalis, 14.

Current quarantine measures.

[Translated in this Bureau from the "Veröffentlichungen des Kaiserlichen Gesundheitsamtes," Berlin July 20, 1898.]

BULGARIA.—As a precautionary measure against the introduction of plague the Bulgarian Government has issued the following instructions:

1. Bags which arrive directly from Calcutta shall not be allowed to enter Bulgaria.

2. Bags from India which have been unloaded to another ship in a European port may be admitted after disinfection.

3. Bags from India which carry a certificate that they have had free pratique in any European port or that they have been already disinfected, may be admitted to entrance without disinfection.

BRAZIL.*Sanitary report from Rio—Statistics of the Pasteur-Institute at Rio.*

RIO DE JANEIRO, July 11, 1898.

SIR: I have the honor to transmit to you official report for the week ending July 1. There were 309 deaths from all causes, an increase of 13, as compared with the foregoing week; 15 deaths from *accessio perniciosa*, an increase of 6; 21 deaths from yellow fever, an increase of 9; 15 deaths from typhoid fever, an increase of 11; 1 death from diphtheria, and 5 deaths from beriberi, the same as before, and 38 deaths from tuberculosis, a decrease of 7.

There occurred during the week ended July 8, 315 deaths from all causes, 3 deaths from *accessio perniciosa*, 21 deaths from yellow fever, 15 deaths from different fevers, and 5 deaths from beriberi.

Service of the Pasteur-Institute at Rio de Janeiro.—From the date on which in Brazil the prophylactical treatment against hydrophobia was commenced, up to June 30, 1898, 4,068 persons have applied for the assistance of the Pasteur-Institute, here existing under the direction of Prof. Dr. Ferreira dos Santos. Of that number, 2,695 persons have been treated, 172 last year. Treatment has been refused to the persons bitten when it was discovered that the animals were not suffering from lyssa. In two instances it was subsequently discovered that persons rejected on the plea of not having been bitten by rabid animals had actually been so bitten, having shown symptoms of hydrophobia. Three other patients were rejected because they had already been attacked by lyssa when they applied for prophylactical vaccinations.

Of the 2,695 persons treated, 1,935 had been bitten on uncovered parts of the body, and 760 through the clothing.

Application was made in 10 instances by employees of the institute on account of accidents occurring during experiments with animals; in three instances sores, resulting from other causes, were contaminated by contact with the saliva of affected persons, and in two instances the patients were bitten by persons suffering from hydrophobia. As for the rest, the wounds were caused in 2,383 instances by dogs, in 287 instances by cats, in two instances by mules, in one by a cow, in two instances by asses, in one by a horse, and in four instances by monkeys.

In 237 animals the existence of rabies was shown by the experiments;

1,196 animals showed undoubted symptoms, and 1,262 animals highly suspicious symptoms of the sickness.

The number of persons who did not await the termination of the treatment and that of those in whose cases it was discovered that the animals by which they had been bitten were not suffering from hydrophobia was 99. Among those included in the former class there were 3 who are known to have been taken with hydrophobia after leaving the institute. In 6 cases of patients under treatment the lyssa made its appearance before termination of the treatment. During the treatment 5 patients died of other diseases.

Of the 2,585 persons treated, 20 died from hydrophobia, the mortality resulting from this disease being consequently .77 per cent. In these 20 cases hydrophobia appeared in 9 instances within fifteen days after the treatment had been completed.

Before the announcement of Pasteur's discovery the mortality from rabies, according to Leblanc, was 16 per cent.

One thousand five hundred and forty-five persons treated were residents of the city of Rio de Janeiro; the others came from different parts of Brazil.

Since last report the following-named ships have been inspected and received bills of health from this office: July 8, steamship *Arlington*, British, for Ship Island; barkentine *White Wings*, American, for Baltimore, and steamship *Hevelius*, Belgian, for New York. July 11, steamship *Olbers*, Belgian, for New York, and steamship *Dora*, German, for Pensacola.

On board of the steamship *Hevelius* there were 30 steerage passengers from Buenos Ayres, and 3 steerage passengers from Montevideo. All these I have examined here and I have given to the medical officer on board the proper papers.

Respectfully, yours,
W. HAVELBURG, M. D.,
Acting Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

DANISH WEST INDIES.

Quarantine established against Santos.

COPENHAGEN, *July 15, 1898.*

SIR: I have the honor to inform you that the Government of the Danish West Indies has declared a quarantine of five days against ships from Santos on account of the appearance of yellow fever at that port.

I have the honor to be, sir, your obedient servant,

LAURITS S. SWENSON.

Hon. SECRETARY OF STATE.

JAMAICA.

One death from yellow fever at Kingston.

[Telegram.]

The following telegram was forwarded, on August 10, to this Bureau by the Department of State:

KINGSTON, JAMAICA, *August 10, 1898.*

Steamer *Darien* shortly due at Pensacola, left man here who died of yellow fever.

DENT, *U. S. Consul.*

NOTE.—This information was at once wired to the local quarantine officer at the port of Pensacola.

JAPAN.

Report on prevalence of infectious diseases.

YOKOHAMA, JAPAN, *July 16, 1898.*

SIR: I regret that I am unable to obtain the necessary material for my regular report of infectious disease in time for this mail.

I am, however, able to state that, with the exception of some slight indications of the imminence of our yearly epidemic of dysentery, and a localized outbreak of variola in the extreme north of the island of Nipon, the sanitary condition of Japan is, for the season of the year, exceedingly good.

The onset of the summer heat has been apparently, as usual, followed by an abatement of the epidemic of plague in Formosa. In this connection I may say that from private, but thoroughly reliable sources, I am convinced that but a very small proportion of the cases of plague occurring among the native Formosans ever became known to the Japanese authorities.

I am, sir, very respectfully your obedient servant,

STUART ELDRIDGE, M. D.,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

MEXICO.

Yellow fever at Tampico.

The United States vice-consul, writing under date of July 31, 1898, reports that during the week ended on that date there were 9 deaths from yellow fever in Tampico. He adds: "There are fevers of the malarial, remittent, intermittent, and pernicious types. Some cases of yellow fever; can not ascertain an appropriate number; the number, however, is not large. Condition and weather favorable to sickness. Active measures are being employed to prevent the spread of yellow fever."

UNITED STATES OF COLOMBIA.

Yellow fever at Cartagena.

The United States consul at Cartagena reports that during the week ended July 15, 1898, there were 2 fatal cases of yellow fever in Cartagena. The fever focus, he states, is strictly confined to the colony of Turks or Assyrians, who are extremely filthy in their habits.

VENEZUELA.

Smallpox reported epidemic at Valencia.

The United States consul at Puerto Cabello reports, under date of July 23, 1898, that the city and port of Puerto Cabello are in excellent sanitary condition. He states that quarantine exists with respect to the city of Valencia, distant some 30 miles, on account of the reported existence of about 1,000 cases of smallpox in that city.

STATISTICAL REPORTS.

BAHAMAS—*Dunmore Town*.—Two weeks ended July 29, 1898. Estimated population, 1,472. Total number of deaths, 1.

Governors Harbor.—Two weeks ended July 31, 1898. Estimated population, 1,500. No deaths.

Green Turtle Cay—Abaco.—Two weeks ended July 28, 1898. Estimated population, 3,900. No deaths.

BERMUDA.—Two weeks ended July 29, 1898. Estimated population, 15,013. Total number of deaths, 2. No deaths from contagious diseases.

CANADA—*Hamilton*.—Month of July, 1898. Estimated population, 50,000. Total number of deaths, 50, including diphtheria, 2, and 3 from scarlet fever.

BRAZIL—*Ceara*.—Month of June, 1898. Estimated population, 50,000. Total number of deaths, 117.

COLOMBIA—*Cartagena*.—Two weeks ended July 15, 1898. Estimated population, 25,000. Number of deaths not reported. Two deaths from yellow fever.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 33 great towns in England and Wales during the week ended July 23 correspond to an annual rate of 15.6 a thousand of the aggregate population, which is estimated at 11,218,378. The highest rate was recorded in Salford, viz, 23.9, and the lowest in Croydon, viz, 4.6.

London.—One thousand three hundred and thirty deaths were registered during the week, including measles, 22; scarlet fever, 8; diphtheria, 29; whooping cough, 38; enteric fever, 8, and diarrhea and dysentery, 69. The deaths from all causes correspond to an annual rate of 15.4 a thousand. In greater London 1,204 deaths were registered, corresponding to an annual rate of 13.9 a thousand of the popu-

lation. In the "outer ring" the deaths included 12 from measles, 11 from diphtheria, 1 from scarlet fever, and 7 from whooping cough

Cardiff.—Three weeks ended July 23, 1898. Estimated population, 130,283. Total number of deaths, 120, including diphtheria, 6; enteric fever, 1, and 1 from measles.

Ireland.—The average annual death rate represented by the deaths registered during the week ended July 23 in the 23 principal town districts of Ireland was 21.3 a thousand of the population. The lowest rate was recorded in Galway and Queenstown, viz, 0.0, and the highest in Sligo, viz, 35.5 a thousand. In Dublin and suburbs 152 deaths were registered, including diphtheria, 1; enteric fever, 1; scarlet fever, 1, and whooping cough, 5.

Scotland.—The deaths registered in 8 principal towns during the week ended July 23 correspond to an annual rate of 20.1 a thousand of the population, which is estimated at 1,568,536. The lowest mortality was recorded in Aberdeen, viz, 15.2, and the highest in Perth, viz, 23.8 a thousand. The aggregate number of deaths registered from all causes was 605, including diphtheria, 2; measles, 19; scarlet fever, 8, and whooping cough, 29.

MALTA.—Two weeks ended June 30, 1898. Estimated population, 177,745. Total number of deaths, 29, including 2 from enteric fever.

NORFOLK ISLAND.—Month of May, 1898. Estimated population, 876. One death.

WEST INDIES—St. Thomas.—Three months ended June 30, 1898. Estimated population, 12,000. Total number of deaths, 122, including leprosy, 2, and phthisis pulmonalis, 15.
