

Public Health Reports

Treasury Department, United States Marine-Hospital Service. Published in accordance with act of Congress approved February 15, 1893.

VOL. XIII. WASHINGTON, D. C., NOVEMBER 18, 1898. No. 46.

UNITED STATES.

[Reports to the Supervising Surgeon-General, United States Marine-Hospital Service.]

Special report upon the effort to test in suitable cases the "serum anti-amarylic, donated to the United States by Professor Sanarelli, of the University of Montevideo, Uruguay, with the request that it be tested at the earliest opportunity in suitable cases of yellow fever.

SIR: Pursuant to your instructions of August 20, 1898, to proceed to Santiago de Cuba, for the purpose of testing the serum in suitable cases, both as a curative and as a prophylatic agent, I did so at my earliest opportunity, arriving in that city on August 25. Consultation with the military officials of our Government in command convinced me that the rumors prevalent in the United States of the malarial character of the prevailing fever in Santiago, rather than yellow fever, was correct. The officials of the city declared that there was no yellow fever in Santiago; therefore I refrained from visiting the city hospitals, because of the consumption of time, and the inadvisability of a difference of opinion as to diagnosis in any possible cases seen there. However, the surgeon-in-chief of the military commandant of the province of Santiago assured me of the presence of the disease, as reported to him by his subordinate officers, and gave me *carte blanche* to enter the hospitals at both Siboney and on the island in the bay set apart for the purpose of a yellow fever camp. Owing to the rapidly progressing discontinuance of the camp at Siboney, I took up my residence at the island hospital. A careful scrutiny of the number of convalescents there, and an inspection of their clinical histories, especially in regard to the pulse and temperature tracings, convinced me that, while there was, in numerous cases, a condition resembling yellow fever, yet the pulse and thermographs did not fulfill the demands as enunciated by J. C. Faget;* that, while the pulse tracings were generally low there was an absence of the typical "want of coordination" seen in an

* Monographic sur le type et la specificité, de la Fièvre Jaune, 1875.

ascending or *stationary* fever at its acme, together with a *falling* pulse. There was much food for reflection, and I was finally convinced that in all of these cases, showing an intermitting type of fever, and most of them an enlarged spleen and tender liver, a malarial intoxication was present. Yet could the slow pulse, spongy gums, yellowish (not pronounced) skin and eyes, skin extravasations, depend upon yellow fever infection? I had reason to question the statement of "albumen in the urine" in some cases, since I was led to doubt the competency of the analyst. A continued study of these facts and of the cases arriving of so-called yellow fever, led me to the conclusion that the *ensemble* of symptoms which had been so freely thus diagnosed was due to a very general condition of incipient, or developing scorbutus, upon which there had become implanted a malarial toxæmia. To me this seemed to develop a condition of serious danger but little inferior to yellow fever itself. At no time did I see a case which warranted the use of the curative serum, since the enlarged spleens and other evidences of malarial infection, even if I had accepted the dictum of those in charge of the hospital, would under Sanarelli's direction, have gone far to negate the results of its use. Under such circumstances I deemed it my duty to acquaint you with the conditions existing, especially since I had before visiting this hospital and examining the patients, reported to you the favorable opportunity to fulfill your wishes in regard to this serum, as it was presented to me by the authorities.

In differing from the opinion of the officials of this hospital, I must express my grateful appreciation of their uniform courtesy to me at all times, and of the interest there was manifested in the work committed to my charge.

It is but right to say that every official courtesy was extended by Generals Lawton and Wood, and especially by Colonel Havard, the surgeon-in-chief, of the military forces occupying the province of Santiago de Cuba.

Respectfully, yours,

EUGENE WASDIN,
Surgeon, U. S. M. H. S.

Explanation of plague suspected cases on the Duchesse Anne.

[Telegram.]

SAN FRANCISCO, CAL., November 11, 1898.

The captain of the bark *Duchesse Anne* died five days out from Hongkong—no diagnosis. No special reason to think he had plague. Another sailor died about a month afterwards of tuberculosis. No chances taken—vessel disinfected twice.

ROSENAU, Passed Assistant Surgeon, U. S. M. H. S.

Total for Louisiana, 1,470 cases, 51 deaths. Mortality, 3.47 per cent.

Total for Mississippi, 985 cases, 63 deaths. Mortality, 6.40 per cent. Total for New York, 1 case 1 death. Grand total for 1898, 2,456 cases, 115 deaths. Mortality, 4.68 per cent.

CORRECTION.

[The 3 cases of yellow fever reported to have occurred in the marine barrack, Key West, Fla., in August last, and published in the PUBLIC HEALTH REPORTS of August 19, 1898, have since been declared by Surgeon R. D. Murray, U. S. M. H. S., not to have been yellow fever, the amended diagnosis declaring them to have been dengue.]

Case of smallpox in San Francisco, Cal.

SAN FRANCISCO, CAL., November 7, 1898.

SIR: I have the honor to report the admission of a case of smallpox at this hospital, viz:

Jamaica negro, aged 40 years, and last employed on steamship *Mari-rosa* from August 9, to October 21, 1898. Since the latter date he has been living ashore. The case was immediately reported to the board of health of the city and county of San Francisco who request that he be kept at this hospital. The case has been isolated. No other cases in this vicinity are known to this office.

Respectfully, yours,

JAMES M. GASSAWAY,
Surgeon, U. S. M. H. S., In Command.

Case of smallpox in Cleveland, Ohio.

CLEVELAND, OHIO, November 14, 1898.

SIR: I have the honor to report a case of smallpox in this city. The case is of so mild a type that a definite diagnosis was not made until late on the 12th instant. A newspaper clipping relating thereto is herewith inclosed.

Respectfully, yours,

H. W. WICKES,
Assistant Surgeon, U. S. M. H. S., In Command.

Smallpox in Edgecombe County, N. C.

RALEIGH, N. C., November 12, 1898.

SIR: You are hereby informed that 10 cases of smallpox have been reported to this office as existing in Edgecomb County, in two families. The origin of the disease is Norfolk, Va. Precautions taken as usual.

RICHARD H. LEWIS,
Secretary State Board of Health.

Smallpox in Mobile, Ala.

MOBILE, ALA., November 10, 1898.

SIR: I have the honor to report that a case of smallpox in a colored man was discovered in this city on the 27th ultimo. The man had lately come from Dwight, Washington County, Ala., where the disease was reported as existing on September 12. The case ended fatally on November 5.

Health Officer Goode vaccinated 22 persons who had possibly been in contact with the case and corraled several in the house where it was found. There have been no subsequent cases.

I am, very respectfully, your obedient servant,

R. D. MURRAY,
Surgeon, U. S. M. H. S.

Smallpox in Norfolk (city and county), Va.

NORFOLK, VA., November 10, 1898.

SIR: I have the honor to report another case of smallpox found in this city on Tuesday, 8th instant. It was taken to the pesthouse and the usual precautions observed. This will make the 17th case since my first report. There are only 7 cases now in the city pesthouse, the others having been discharged, cured.

So far I have been unable to ascertain the number of cases in the county (Norfolk) to date. Since January 1, I hear they numbered about 60; all treated at pesthouse of the county, about 10 or 15 miles from this city.

Respectfully, yours,

EDWD. E. FEILD,
Acting Assistant Surgeon, U. S. M. H. S.

Case of smallpox in Richmond, Ind.

INDIANAPOLIS, November 9, 1898.

SIR: One case of smallpox reported from Richmond, Ind. Origin probably in Ohio. All precautions taken to prevent its spread.

J. N. HURTY, Secretary.

AZORES.

Azores remove quarantine against New York.

DEPARTMENT OF STATE,
Washington, D. C., November 11, 1898.

SIR: I have the honor to quote for your information the following telegram received from the consul in charge of our legation at Lisbon: "Steamer *Vega*, from New York, October 30, allowed usual pratique Azores."

This appears to indicate the satisfactory removal of the yellow fever quarantine recently proclaimed at the Azores against New York.

I have the honor to be, sir, your obedient servant,

JOHN HAY.

HON. SECRETARY OF THE TREASURY.

BARBADOS.

Sanitary report from Barbados.

BARBADOS, October 29, 1898.

SIR: I have to report as follows: Trinidad is admitting to pratique vessels arriving from ports south of Cape Paria on their producing clean bills of health signed by the British vice-consul at Ciudad Bolivar and by agents of the Trinidad Government at Guiria and Maturin.

At St. Thomas all arrivals there from Puerto Rico are subject to inspection by the health officer.

At Jamaica there had been, on the 12th instant, a mild case of yellow fever at Buff Bay, over 50 miles from Kingston, which recovered.

The reports furnished by the chairman of the St. Lucia quarantine board are as follows:

Bahia: For the fortnight ended October 19, clean bill of health.

Manaos: On October 15, clean bill of health.

Para: For the fortnight ended October 21, 3 deaths from yellow fever.

Pernambuco and Santos: For the fortnight ended October 10, clean bills of health.

Rio Janeiro: For the fortnight ended October 13, 12 cases of yellow fever, and 32 deaths from smallpox.

The schooner *Lena* arrived on the 25th instant, and the *Nellie M. Johnston* last night, both from Neguabo, Puerto Rico, with clean British consular bills of health; and the R. M. S. *Solent*, arrived this morning from San Juan, Mayaguez, Aguadila, and Ponce, Puerto Rico, with clean British consular bills of health from those places. The acting British consul-general at San Juan writes, under date 21st instant, in reply to inquiries from this Government: "I hear that 4 cases of yellow fever did occur among the American troops near Ponce some time ago, but proper precautions were taken by the military authorities to isolate the men, and there have been no new cases reported since. I am informed that no cases of smallpox have been reported, and that the only disease now prevalent at some camps is dysentery, and some cases of malaria and typhoid fever."

This colony is quarantining the following places: Bahia, Cuba, Para, Rio Janeiro, Santos, and Venezuela (excepting Ciudad Bolivar and Barancas).

The public health here is good with the exception of cases of dysen-

tery and typhoid fever in the country districts, the result of the late storm.

I have the honor to be, sir, your obedient servant,
JAS. SANDERSON, Clerk, Quarantine Board,
The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

BRAZIL.

Sanitary report from Rio.

RIO DE JANEIRO, October 4, 1898.

SIR: I have the honor to transmit to you the official reports for the weeks ended 16th and 23d of September.

There were, during the week from the 10th to the 16th of September, 234 deaths from all causes, an increase of 37 as compared with the foregoing week; 12 deaths from *accessio pernicioso*, an increase of 8; 2 deaths from yellow fever, a decrease of 3; 2 deaths from typhoid fever, none before; no death from whooping cough, 1 death before; 3 deaths from beriberi, an increase of 2, and 54 deaths from tuberculosis, an increase of 18.

During the week ended September 23, there were 225 deaths from all causes, a decrease of 9, as compared with the foregoing week; 9 deaths from *accessio pernicioso*, a decrease of 3; 3 deaths from yellow fever, an increase of 1; 4 deaths from smallpox, none before; 2 deaths from typhoid fever, the same as before; 1 death from whooping cough, none before; 2 deaths from beriberi, a decrease of 1, and 38 deaths from tuberculosis, a decrease of 16. * * *

Information.—The continuance of the rain has improved the sanitary state in the city of Rio de Janeiro, as may be seen by the above-mentioned figures. Yellow fever prevails only on a moderate scale. There have been some cases of smallpox, but for the most part of a benignant character.

From the state of Sao Paulo I can give you some official data concerning the sanitary conditions during the month of July. The total number of deaths was 2,569, a decrease of 945, as compared with the month of June. From tuberculosis there died 148 persons, a decrease of 13, and from malarial fevers, 75 persons, a decrease of 31.

From typhoid fever there died 25 persons, of whom 5 were in the capital.

From yellow fever there occurred 25 deaths at Santos, a decrease of 39, 4 cases at the city of Sao Paulo, a decrease of 2, 1 at Campinas, and 3 at Jahu. The city of Sao Carlos de Pinhal, which suffered very much before, was in that month perfectly free from that disease.

From smallpox there died 65 persons at Sao Paulo, 2 at Santos, 1 at Sorocaba, 2 at Bragança, and 1 at Santo Amaro. Of these 65 deaths at Sao Paulo, 54 persons died in the isolation hospital, and the rest at their private homes. In the isolation hospital there were treated 133 smallpox patients.

In regard to other infectious diseases there were in the state of Sao Paulo 10 deaths from measles, 4 deaths from diphtheria, 32 deaths from whooping cough, 9 deaths from erysipelas, 25 deaths from dysentery, of which 9 deaths were at the capital, and 6 deaths of lepra.

Since last report the following-named ships have been inspected and received bills of health of this office: September 20, bark *Brilliant*, Norwegian, for Ship Island. September 21, steamship *Buffon*, British,

for New York. September 22, bark *Odd*, Norwegian, for Pascagoula. September 27, bark *Duo Fratelli*, Italian, for Pensacola; steamship *Janeta*, British, for St. Lucia. September 28, steamship *Florence*, British, for St. Lucia. September 30, steamship *Biela*, British, for New York. October 1, steamship *Kelvindale*, British, for Galveston; schooner *Canada*, British, for Norfolk; bark *Dom Pedro II*, American, for Baltimore. October 3, steamship *Horraz*, British, for New Orleans; steamship *Cyprian Prince*, British, for New York.

Respectfully, yours,

W. HAVELBURG, M. D.,
Sanitary Inspector, U. S. M. H. S.

CUBA.

Sanitary report from Habana.

HABANA, CUBA, November 4, 1898.

SIR: The following report for the week ended Thursday, November 3, is respectfully submitted:

Yellow fever.—There were 6 deaths from yellow fever during the week; 4 occurred among the Spanish troops, 1 in a civil hospital, and the other occurred at No. 70 Oficios street, which is near the harbor. Apparently the disease is slowly declining, still the atmospheric and other conditions favorable to the spread of the disease are all present. For four days a northeast gale has prevailed, and as a result the temperature has been considerably lowered.

Malarial fevers.—There is a decided decrease in the number of deaths from the different forms of malarial fevers. Last week there were 94 deaths from these fevers, while this week there were 60 deaths. Americans seem to be predisposed to the remittent form, but so far as my observation goes (7 cases) it is mild in type, and yields in nearly every instance to quinine. I see no difference between the fevers in these few cases and those to be found in the Southern States.

There is absolutely no difficulty in differentiating them from yellow fever, yet some persons who have suffered from an attack are being given certificates of immunity to yellow fever.

The deaths from all causes are decreasing, the mortality for the present week being lower than any week since September.

The rainfall during the week has been excessive. Incidentally it may be stated that the rainfall for October was over 13 inches.

Very respectfully,

W. F. BRUNNER,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

INDIA.

Calcutta declared free from plague.

CONSULATE OF THE UNITED STATES,
Calcutta, October 12, 1898.

SIR: I have the honor to inclose herewith the official announcement of the Hon. Lieutenant-Governor of Bengal, published in *The Englishman*, of the 10th instant, that "Calcutta is now free from the infection of bubonic plague."

I have the honor to be, sir, your obedient servant,

R. F. PATTERSON,
United States Consul-General.

Hon. ASSISTANT SECRETARY OF STATE.

[Inclosure.]

The following Calcutta Gazette extraordinary has been issued:

It is hereby notified for general information that Calcutta is free from plague, and that all inspections of, and restrictions regarding travelers from Calcutta have been withdrawn.—E. N. BAKER, *Officiating Secretary to the Government of Bengal.*

TURKEY.

Sanitary report from Constantinople.

[Report No. 202.]

CONSTANTINOPLE, October 17, 1898.

SIR: According to the reports of the sanitary physician at Prevesa, in Epirus, the sanitary condition of said town has been very imperfect on account of the high prices which have existed during these last months. Another cause of the above-mentioned imperfect sanitary condition is the pollution of the waters supplied to that city. There was, among others, a little spring in Prevesa, the water of which was of the best quality. Without any reason known said water is no longer potable on account of its bad smell. I can not state whether said spring is in connection with the cemetery of the town or on account of the last war that dead bodies have been buried in the neighborhood of said spring. The inhabitants have suffered very much from diarrhea. The epidemic of smallpox continues.

An epidemic of diphtheria broke out at Malah, a little village eight hours' distant from Trebizonde, and at the height of 1,000 meters from the level of the sea. In said village there are only 200 inhabitants. Of these, 30 have already died from said disease, which certainly was not imported from outside—the surrounding villages, according to the sanitary report, being in a perfect sanitary condition.

In the province of Yemen typhoid fever broke out. I have written in my previous reports that in that province dearth exists as a consequence of drought, which has lasted three years.

In Constantinople smallpox and typhoid fever are always prevalent. There are also several cases of scarlet fever. From the 26th ultimo to the 17th instant 361 deaths have been registered. Of these, 5 are from scarlet fever, 3 from diphtheria, 21 from smallpox, and 12 from typhoid fever.

I have the honor to forward the French copy of the proceedings of

their sittings of the International Sanitary Commission for September 17 and October 4, with a copy of the report of the Ottoman sanitary commissioner in the Alexandria International Sanitary Commission.

The subject we dealt with in the sitting of the 17th ultimo was the lazaretto of Camaran, on which I have already had the honor to lay stress in my previous reports, and about which I have already forwarded a printed report. I forward the present copy, in which will be read what the vice-president of said International Sanitary Commission says about the way in which said lazaretto is built. At the beginning, it was decided that 500,000 francs would be spent for the buildings. Two millions nearly have been already spent, and the lazaretto is far from being finished and ready. In connection with this fact I beg you to remember the report which I forwarded on the sanitary commission, report 182.

The subject we dealt with in the sitting of October 4 was the quarantine of five days to which the arrivals from Djiddah were subjected in Egypt. I have already written about said question in my last report.

SPIRIDION C. ZAVITZIANO,
United States Sanitary Commissioner.

TURKEY.

[Inclosure No. 1.—Translated in this Bureau.]

Quarantine constructions at Camaran.—Proceedings of the superior council of health at Constantinople in regard to quarantine.

An extra session of the council was held September 17, to discuss the report on quarantine plant and buildings erected at Camaran, which was read at the session of the preceding week.

The delegate of the low countries stated that he had been instructed by his government to interview Engineer Roulet with regard to certain details of the work. He requested the council to reconsider its decision relative to the proposed adjournment of the construction of the pavilions of disinfection and the jetties for the following reasons :

The present pavilion of disinfection is situated at a point to reach which the pilgrims, in going and coming, have to pass through certain parts of the camp with which they should not be brought in contact. In the fifth and sixth divisions of the camp, which are set aside for the reception of infected arrivals, there is neither jetty nor special pavilion and infected arrivals have no resource but to be treated at the pavilion now existing. The situation is anomalous and highly dangerous for the indemn pilgrims who are undergoing quarantine, the more so in view of the spread of plague in India and the fact that infected arrivals are to be expected at Camaran. The lazaretto system adopted at Camaran requires the completion of pavilions of disinfection properly constructed at suitable locations. The same is true of the construction of jetties for the service of disembarkation and embarkation of pilgrims.

Dr. Zeri declared himself in favor of such work only as could be immediately executed. Such work would have to be completed before May of next year, as it has been found impossible to retain workmen during the summer months.

Dr. Dickson (English delegate) stated that on account of the increase of plague in India the construction of the jetties and pavilions projected for the 5th and 6th divisions of the station of Camaran were urgently and immediately necessary. The Indian Government, added Mr. Dickson, had at the instance of the council, prohibited the pilgrimage for last year, but having since subscribed to the Venice convention it could no longer maintain that interdict. What was to be done with infected arrivals at Camaran? Should the indemn divisions of the camp be compromised? He concluded by stating that his ambassador had instructed him to insist on the immediate construction of the jetties and pavilions.

Dr. Hagel declared that he condemned the deplorable system pursued up to the present time at Camaran, and wished formally to object to its continuance. Plans were proposed to the council, considered, adopted and authorized, and were finally modified, leaving the constructions incomplete. He asked for control in the matter of expense.

Ahmed Bey assented to Dr. Hagel's proposition and further proposed that the Imperial Government be petitioned to create a commission composed of officers of the army of Yemen to examine the plans of Engineer Roulet for the jetties and pavilions, and that on approval of the plans the commission should have authority to direct Engineer Roulet by telegraph to immediately commence work. Dr. Dickson assented but drew attention to the loss of time in waiting for the report of the commission. Dr. Zeri proposed the construction of one jetty and one pavilion at Camaran, pending the report of the commission. On deliberation the council finally adopted the following resolutions:

1. That the Imperial Government shall be asked to name a technical commission to report on the work already executed at Camaran.

2. The jetty and pavilion of disinfection to be constructed between the fifth and sixth divisions of the camp, according to the plans of Engineer Roulet, shall be immediately commenced, the work to be discontinued if found to exceed in cost the amount available.

3. The commission shall examine plans for other structures proposed for erection at Camaran, including suitable lodgings for pilgrims.

[Inclosure No. 2.—Translated in this Bureau.]

Pilgrimages to Mecca closed for this year, and the Hedjaz released from quarantine restrictions.

ALEXANDRIA, October 4, 1898.

Pursuant to my report of the 27th instant, I have the honor to inform you that at the session of October 4 the president of the quarantine council introduced the proposition to close the pilgrimage for this year, and to suspend the quarantine measures applicable to arrivals from the Hedjaz. This was followed by a lively discussion, many delegates formally opposing the suspension of quarantine measures. Believing that sporadic cases of plague might exist in the Hedjaz and escape detection by the sanitary authorities, they voted against the proposition. It received, however, the support of the president and the English delegate, and was accepted by a vote of 7 to 5. In consequence of this action the Hedjaz is free.

The delegates who voted in favor of the proposition were those from England, Norway and Sweden, Italy, the Low Countries, Belgium, the city sanitary inspector, and the writer. The delegates of Spain, Austria-Hungary, Germany, Russia, and Greece, voted against it. The delegate of France abstained from voting.

In the course of the discussion I was asked by the delegate from Austria-Hungary whether the commission instituted by the superior council of health was in performance of its functions at Djiddah. The delegate of England expressed the wish that telegraphic communication should be made with Yambo, and that a physician should be permanently established there.

DR. DUCA, *Ottoman Delegate.*

To the SANITARY ADMINISTRATION OF THE OTTOMAN EMPIRE, *Constantinople.*

FOREIGN STATISTICAL REPORTS.

AUSTRALIA—*Queensland—Brisbane.*—Month of August, 1898. Estimated population, 105,734. Total number of deaths, 100, including diphtheria, 2; enteric fever, 1; measles, 2; scarlet fever, 7; whooping cough 4, and 13 from phthisis pulmonalis.

BERMUDA.—Two weeks ended November 4, 1898. Estimated population, 15,013. Total number of deaths, 1, which was from enteric fever.

CHILE—*Antofagasta.*—Month of September, 1898. Estimated population, 14,000. Total number of deaths, 37, including enteric fever, 1, and 7 from phthisis pulmonalis.

GREAT BRITAIN—*England and Wales.*—The deaths registered in 33 great towns in England and Wales during the week ended October 29 correspond to an annual rate of 17.9 a thousand of the aggregate popu-

lation, which is estimated at 11,218,378. The highest rate was recorded in Liverpool, viz, 26.6, and the lowest in Croydon, viz, 9.6.

London.—One thousand four hundred and twelve deaths were registered during the week, including measles, 19; scarlet fever, 10; diphtheria, 46; whooping cough, 13; enteric fever, 20, and diarrhea and dysentery, 33. The deaths from all causes correspond to an annual rate of 16.3 a thousand. In greater London 1,817 deaths were registered, corresponding to an annual rate of 14.8 a thousand of the population. In the "outer ring" the deaths included 19 from diphtheria and 5 from scarlet fever.

Ireland.—The average annual death rate represented by the deaths registered during the week ended October 29 in the 23 principal town districts of Ireland was 23.3 a thousand of the population, which is estimated at 1,007,798. The lowest rate was recorded in Armagh, viz, 7.1, and the highest in Tralee, viz, 44.8 a thousand. In Dublin and suburbs 177 deaths were registered, including diphtheria, 3; enteric fever, 3; scarlet fever, 1, and whooping cough, 1.

Scotland.—The deaths registered in 8 principal towns during the week ended October 29 correspond to an annual rate of 20.0 a thousand of the population, which is estimated at 1,568,536. The lowest mortality was recorded in Leith, viz, 15.7, and the highest in Perth, viz, 27.2 a thousand. The aggregate number of deaths registered from all causes was 603, including diphtheria, 8; measles, 4; scarlet fever, 4, and whooping cough, 6.
