

PUBLIC HEALTH REPORTS.

UNITED STATES.

MARITIME QUARANTINE REGULATIONS WITH REGARD TO YELLOW FEVER.

[Adopted by certain State and municipal quarantine authorities.]

Following are regulations with regard to vessels from ports quarantined against on account of yellow fever, adopted at a conference of the Louisiana, Texas, and Mobile quarantine authorities held at Galveston, Tex., January 6, 1903.

Regulations governing vessels from ports quarantined against yellow fever, adopted at conference held in Galveston, Tex., January 26, 1903, by Texas, Louisiana, and Mobile, Ala.

(1) Vessels from all Mexican ports shall be disinfected and shall be detained five days, beginning April 1.

(2) Vessels from Cuban ports shall be governed by the following regulations:

(3) A resident medical inspector appointed by the health authorities, parties to this conference, shall be stationed at Habana after April 1 to perform such duties as they shall elect.

(4) Vessels, passengers, and baggage shall be disinfected at the ports of departure after May 1, particular attention to be paid to the destruction of mosquitoes.

(5) Vessels and passengers shall be re-disinfected, chiefly for mosquitoes, at the quarantine stations.

(6) The passengers shall not be detained if there is no suspicious sickness on board nor in port at departure.

(7) Vessels from Porto Rico shall be subjected to no restrictions unless vessels previously from infected ports and not disinfected at Porto Rico.

(8) Vessels from ports other than fruit ports and Cuban ports where yellow fever has not been reported for the last two years and where there resides a medical inspector of the health authorities, parties to this conference, or of United States Public Health and Marine-Hospital Service, shall be disinfected upon arriving at the quarantine station

after April 15, but shall not be detained. The passengers shall not be detained.

(9) Vessels which are not included in the foregoing categories, but which are from ports liable to yellow fever, shall be disinfected at the quarantine station and detained five days, beginning April 15.

(10) Vessels from ports supposed to be free of yellow fever, but from which yellow fever has been subsequently reported, shall be disinfected upon arriving at the quarantine station and shall be detained five days.

(11) Free pratique shall be given to noninfected vessels with or without passengers, from ports where yellow fever is suspected or prevails, provided the said vessels are disinfected at the port of departure, or at the last port touched, in a manner satisfactory to the health authorities, parties to this conference; provided further, that said vessels, upon arriving at the quarantine station, shall be disinfected again; and provided still further, that full five days at least shall have elapsed since the completion of the first disinfection before the second disinfection is done at the quarantine station.

(12) These regulations do not apply to fruit vessels, which operate under special regulations.

(13) Under these regulations noninfected vessels which have been at least five days in transit since the first disinfection—i. e., “long-trip vessels”—shall not be detained after the second disinfection. •

(14) Vessels which have been less than five days in transit—i. e., “short-trip vessels”—which have anchored about 1,000 feet away from shore and have not had communication with shore at the quarantined ports shall not be detained, but the passengers, if any, shall be detained long enough to make five days from the disinfection at the port of departure.

(15) The baggage of such passengers must of course be disinfected before being admitted on board.

(16) Only noninfected vessels which have had communication with the shore at the quarantined ports shall be detained long enough to make five days from the first disinfection. They shall be disinfected for the second time at the end of their five days and not on the day of their arrival at the quarantine station.

(17) Healthy vessels, not otherwise subject to quarantine, which have touched for coal or orders at intertropical islands, reported free of infectious diseases, without taking on board at such islands either passengers or freight, will be allowed to pass without disinfection or detention; provided, they sail from said port between sunrise and sunset of the day of arrival thereat and they have been more than five days in transit.

(18) Vessels infected shall be disinfected and shall be detained not less than five days after the removal of the last case of yellow fever.

Regulations governing fruit vessels during the quarantine season.

(1) There shall be a resident medical inspector appointed for each port.

(2) Vessels shall have no communication with the shore and conversely, except through the laborers.

(3) Vessels shall carry only fruit and specified articles of freight.

(4) Vessels carrying passengers shall carry a marine medical inspector on board.

(5) Passengers shall not be received on board unless their clothing and baggage have been previously disinfected.

(6) Vessels not carrying passengers, effects and living quarters shall be disinfected but not detained.

(7) Vessels with passengers shall be redisinfecting at port of arrival, i. e., living quarters and effects, neither vessel nor passengers to be detained.

(8) Vessels from infected ports shall all carry marine medical inspectors, those not carrying passengers as well as those carrying passengers. Bocas and Limon are now considered as infected ports. They shall all be disinfected at the quarantine station.

(9) Passengers from Belize, Livingston, Port Barrios, Port Cortez, Ceiba, and Bluefields shall not be detained unless there has been suspicious sickness on board or at the port of departure. The passengers must be residents of the port or must have been five days at the port before embarkation.

(10) The passengers' baggage shall be disinfected at the port of departure after April 15.

(11) Mosquitoes on the vessels shall be destroyed at the port of departure. These vessels shall be disinfected at the quarantine station, particular attention being paid to the destruction of the mosquitoes.

(12) Passengers from Limon and Bocas shall not be admitted during the quarantine season.

(13) No vessel shall lie at the wharf at Limon at night longer than absolutely necessary to unload and load. At Bocas they may load at the Chiriqui fruit pier, likewise at the Cortez pier.

(14) The vessel's crew shall be kept on board, isolated from the laborers as much as practicable.

(15) The captain or any other officer of the vessel may go ashore to enter and clear his vessel only during daylight, and he shall return aboard immediately, without having gone anywhere else, especially into houses.

(16) Sulphur shall be burned in holds of fruit vessels from infected ports after discharge of cargo at port of arrival.

(17) Infected vessels shall be disinfected and shall be detained with all on board at least five days at the quarantine station after the com-

pletion of the disinfection and the removal of the last case of yellow fever from the vessel.

(18) Agents may send lighters down to the station to bring the fruit to the city.

(19) Fruit vessels which have left a port declared infected before the health authorities, parties to this conference, had time to place a medical inspector on board, upon arriving at the quarantine station shall be disinfected, the regular crew removed, a new crew placed on board, except the master and engineer, and they shall be allowed to unload at the wharf in the city, or shall be detained until five days have elapsed from day of departure, and then permitted to proceed to the city.

[Reports to the Surgeon-General Public Health and Marine-Hospital Service.]

Summary of work in Chinatown, San Francisco, for week ended March 28, 1903.

Following received from Surgeon Glennan at San Francisco, under date of March 29, being record of work in Chinatown for week ended March 28:

Buildings inspected	65
Reinspected	34
Rooms inspected	976
Persons	847
Sick	45
Dead	3
Necropsies	1
Cases of plague	0
Rats examined bacteriologically	43
Places disinfected	520
Sewers flushed	7 times.
Streets swept and sprinkled with bichloride solution	3

A death from plague at San Francisco.

TELEGRAMS.

SAN FRANCISCO, CAL., *March 17, 1903.*

WYMAN, *Washington:*

Provisional diagnosis of bubonic plague necropsied to-day. Bubo septicæmic. Japanese female. Originated in San Francisco. Present: Drs. O'Brien, Gardner, Morrow, Woolsey, Mathewson, Wilson, Yost, Blue, Currie, and myself.

GLENNAN.

SAN FRANCISCO, CAL., *March 28, 1903.*

WYMAN, *Washington:*

Diagnosis bacteriologically confirmed in case 94.

BLUE.

*Measures for checking smallpox in northern Maine (Canadian border)—
Operations at Camp Glazier.*

Surgeon Kalloch reports, March 25, that 145 men have been bathed and their clothes disinfected since last report, March 23. Ninety-nine men have been vaccinated, the others either having been recently vaccinated or refusing to have it done. The men are beginning to return to the woods for the drive, and many who came out of the woods before this station was established can be disinfected when they leave the drive, as they are discharged at the foot of the lake just north of the detention building.

Statistical report of States and cities of the United States—Yearly and monthly.

CONNECTICUT—*Bridgeport.*—Month of February, 1903. Estimated population, 75,000. Total number of deaths 109, including diphtheria 3, scarlet fever 1, and 12 from tuberculosis.

IOWA.—The Iowa Health Bulletin says: Outbreaks of the following infectious diseases have been reported as having occurred at the following places during the month of February, 1903:

Diphtheria.—Des Moines; Lincoln Township, Sioux County; Milo Township, Delaware County; Davenport; Boone; Jackson Township, Clark County.

Measles.—Atalissa; Storm Lake; Boone; Des Moines; Marion Township, Linn County.

Scarlet fever.—New Providence; Afton; Stuart; Walnut Township, Jefferson County; Des Moines; Boone; McCallsburg; Milo Township, Delaware County; Osage; Garfield Township, Mahaska County; Washington Township, Polk County; Iowa City; Elliott Township, Louisa County; Davenport; Indianola; Lincoln Township, Scott County; Hamilton Township, Hamilton County; Garfield Township, Mahaska County; Waukon; Jefferson Township, Allamakee County; Scranton Township, Carroll County; Jackson Township, Clark County; Ruthven; Grand Mound; Lafayette Township, Bremer County.

Smallpox.—Des Moines; Boone; Davenport; Fishville; Albia; Iowa City; Indianola; Panama; Irwin; Green; Bear Grove Township, Guthrie County; Lakeville Township, Dickinson County; Pittsford Township, Butler County; Jackson Township, Warren County; Scott Township, Madison County; Libertyville; Liberty Township, Jefferson County.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended March 21, 1903, from seventy observers, indicate that pleuritis, diarrhea, phthisis pulmonalis, inflammation of bowels, intermittent fever, and diphtheria were more prevalent and erysipelas was less prevalent than in the preceding week.

Meningitis was reported at 2, diphtheria at 26, whooping cough at 27, enteric fever at 31, measles at 62, scarlet fever at 77, smallpox at 109, and phthisis pulmonalis at 169 places.

Grand Rapids.—Month of February, 1903. Estimated population, 90,000. Total number of deaths, 95, including diphtheria 4, enteric fever 2, and 6 from tuberculosis.

MINNESOTA—*Mankato*.—Month of January, 1903. Estimated population, 12,000. Total number of deaths, 10, including 2 from tuberculosis.

Month of February, 1903. Total number of deaths, 18, including 2 from tuberculosis.

Minneapolis.—Month of February, 1903. Estimated population, 240,000. Total number of deaths, 223, including diphtheria 9, enteric fever 2, measles 1, and 34 from tuberculosis.

OHIO—*Youngstown*.—Month of February, 1903. Census population, 44,885. Total number of deaths, 83, including diphtheria 1, enteric fever 13, and 2 from whooping cough.

TEXAS—*San Antonio*.—Month of January, 1903. Estimated population, 65,000. Total number of deaths, 140, including diphtheria 1, enteric fever 4, and 45 from tuberculosis, of which 28 were nonresidents. Month of February, 1903. Total number of deaths, 103, including diphtheria 1, and 30 from tuberculosis, of which 22 were of nonresidents.

UTAH—*Salt Lake City*.—Month of February, 1903. Census population, 53,531. Total number of deaths, 83, including diphtheria 9, scarlet fever 2, and 5 from tuberculosis.

WISCONSIN—*Milwaukee*.—Month of February, 1903. Estimated population, 315,000. Total number of deaths, 409, including diphtheria 4, enteric fever 6, whooping cough 5, and 42 from tuberculosis.

Plague in the United States as reported to the Surgeon-General Public Health and Marine-Hospital Service, from December 27, 1902, to April 3, 1903.

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually, or at the close of the calendar year, and new tables begun. For record of plague in San Francisco for calendar year 1902, see PUBLIC HEALTH REPORTS No. 52, December 26, 1902. A summary of cases since March, 1900, when the first case was officially reported, is as follows: Calendar year 1900, cases, 22; deaths, 22. Calendar year 1901, cases, 29; deaths, 25. Calendar year 1902, cases, 41; deaths, 41.]

FOREIGN AND INSULAR.

AFRICA.

Report from Lourenço Marquez—No plague at Inhambane—Plague increasing at Durban.

Consul Hollis reports, February 9, as follows: The man who was supposed to be ill with the plague at Inhambane is now out of danger, and no further cases of a similar nature have developed at the said port. Inhambane can now be considered as a clean port as far as plague is concerned.

In Durban plague seems to be increasing, but the authorities at this port have not yet declared a quarantine against vessels coming from Durban.

The ASSISTANT SECRETARY OF STATE.

CHINA.

Report from Hongkong—Plague and smallpox.

Passed Assistant Surgeon McMullen reports, February 18, as follows: During the week ended February 14, 1903, ten vessels were inspected, 684 crew and 141 steerage passengers were bathed at the disinfecting station, and 887 pieces of baggage disinfected; 1 rejection for failure of disinfection. During February 30 cases of bristles and 260 cases of feathers have been inspected, to be shipped after thirty days. Two cases and 2 deaths from plague, 5 cases and 2 deaths from smallpox (all Chinese), and 1 case of enteric fever (European) occurred during the week.

The SURGEON-GENERAL.

CUBA.

Report from Cienfuegos.

Acting Assistant Surgeon McMahon reports, March 18, 1903, as follows: Week ended March 14, 1903, 11 deaths. Causes: Malaria, 2; pernicious fever, 2; tuberculosis, 2; other causes, 5.

The SURGEON-GENERAL.

Reports from Habana.

Assistant Surgeon Trotter reports, March 19 and 25, as follows:

Mortuary report of Habana, Cuba, for week ended March 14, 1903. .

Disease.	Number of deaths.
Tuberculosis	20
Pneumonia.....	9
Bronchitis.....	3
Meningitis.....	10
Enteritis.....	1
Scarlet fever.....	2
Glanders.....	1

Total deaths from all causes, 101.

Week ended March 21, 1903.

Disease.	Number of deaths.
Tuberculosis	20
Pneumonia.....	6
Bronchitis.....	7
Grippe.....	1
Typhoid.....	1
Enteritis.....	6
Meningitis.....	6
Dysentery.....	1
Tetanus.....	1
Cancer.....	3

Total deaths from all causes, 113.

The SURGEON-GENERAL.

Reports from Matanzas—Whooping cough prevalent.

Passed Assistant Surgeon Von Ezdorf reports, March 17 and 24, as follows: Twenty-one deaths were reported in this city during the week ended March 14, 1903, making an annual rate of mortality of 22.75 per 1,000.

The causes of death were as follows: Tuberculosis 4, broncho-pneumonia 1, bronchitis 1, pulmonary congestion 1, entero-colitis 1, nephritis 1, endocarditis 1, heart disease, valvular, 1; other causes, 9. No quarantinable disease was reported in this district.

Whooping cough is quite prevalent among the children, and pulmonary affections are more common in the city.

Eleven deaths were reported in this city during the week ended March 21, 1903, making an annual rate of mortality for the week of 11.91 per 1,000. The chief causes of death reported were as follows: Typhoid fever, 1; tuberculosis, 1; malarial cachexia, 1; septicæmia, 1; enteritis, acute, 1; Bright's disease, 1; heart disease, 2; other causes, 3. No quarantinable disease was reported in this district.

The SURGEON-GENERAL.

Report from Santiago.

Acting Assistant Surgeon Wilson reports, March 17, as follows:

Mortality statistics for the week ended March 14, 1903.

Causes of death.	Number.
Pernicious fever.....	2
Tubercle of lungs.....	2
Sarcoma of uterus.....	1
Delirium tremens.....	1
Cerebral hemorrhage.....	2
Tetanus.....	3
Organic heart disease.....	1
Arterio-sclerosis.....	2
Diarrhea and enteritis (under 2 years).....	2
Diarrhea and enteritis (2 years and over).....	2
Stricture of rectum.....	1
Chloroform narcosis.....	1
Total	20

Annual rate of mortality for the week, 24.18 per 1,000. Estimated population, 43,000.

Scarcity of water.

The scarcity of water continues. The supply from the aqueduct is very small and the cisterns are almost empty. In some the water is putrid and they have had to be emptied and washed out.

GERMANY.

*Plague and cholera in various countries.**Plague.*

British India.—During the week ended February 14 there were registered in the Bombay Presidency 14,820 plague cases and 11,499 deaths, of which 856 cases (716 deaths) occurred in the city of Bombay and 32 cases (25 deaths) in the town and port of Karachi.

British South Africa.—During the two weeks from the 18th to the 31st of January 11 deaths from plague were registered in Natal.

Plague and cholera.

British India.—In Calcutta during the two weeks from the 25th of January to the 7th of February 239 persons died of plague and 86 persons died of cholera.

Death rate of Berlin.

The death rate of Berlin for the week ended February 28 was lower than it has been since the middle of November of last year, amounting, calculated upon the year, to 15 per thousand of the population (as compared with 15.9 in the foregoing week), and being considerably lower than for the corresponding week of last year, in which it amounted to 16.2 per thousand. Of the large German cities only the following showed more favorable health conditions than Berlin, viz: Schöneberg (with 14.7), Düsseldorf, Cassel, Barmen, Kiel, and Char-

lottenburg (with 12.4 per thousand). As compared with Berlin, however, the mortality rate was higher in Hamburg, Leipzig, Hanover, Stuttgart, Frankfort-on-the-Main, Cologne, Munich, Nüremberg, Breslau, and in London, Paris, and Vienna. There was no important change in the number of deaths among children in their first year, the decrease being exclusively confined to the higher age classes. The mortality rate among infants amounted to 4.2 per year and mille; less by one-half than that of Munich for this week. Acute intestinal diseases were of less frequent occurrence than during the two foregoing weeks, and caused 29 deaths. Cases of acute diseases of the respiratory organs were less numerous than during any week of the present year, claiming 56 victims. There were registered 74 deaths from phthisis pulmonalis, and 38 persons died of cancer. The number of cases of diphtheria steadily increased during the past three weeks. Further, there occurred 11 deaths from scarlet fever and 8 deaths from measles. Twenty persons died by violence.

The death rate of Berlin for the week ended March 7 was not much higher than for the foregoing week, amounting, calculated upon the year, to 15.1 per thousand of the population, and was thus lower than for the corresponding week of last year, in which it amounted to 16. Of the large German cities, during the week in question, two-thirds showed less favorable health conditions than Berlin. A considerably higher death rate than that of Berlin was recorded in Magdeburg, Leipsic, Hamburg, Nuremberg, Frankfort-on-the-Main, Cologne, Stuttgart, Munich, Königsberg, Breslau, as well as in London, Paris, and Vienna. On the other hand, the mortality statistics were lower than those of Berlin in Dresden, Hanover, Schöneberg (10.6), and Charlottenburg (10.5 per thousand). Children in their first year did not participate in the mortality to any considerably greater extent than during the last half of February, the death rate among infants in Berlin being 4.2 per year and mille, about half that of Chemnitz, Stuttgart, and Munich. Acute intestinal diseases were of more frequent occurrence than in February, causing in this week 41 deaths. There was, however, a falling off in the cases of acute diseases of the respiratory organs, which claimed only 45 victims in comparison with 56 in the foregoing week. There were registered 8 deaths from influenza, and 85 deaths from phthisis pulmonalis. Further, there occurred 7 deaths from scarlet fever, 1 death from diphtheria, and 5 deaths from measles. There were 36 deaths from cancer, and four persons died by violence.

The SURGEON-GENERAL.

Statistical table on scarlet fever in the city and state of Bremen.

Consul Diederich forwards the following from Bremen:

Year.	Population, State of Bremen.	Cases of scarlet fever.	Percent- age.	Deaths.	Percent- age.
1881.....	156,949	582	0.34	21	4.0
1882.....	159,418	1,288	.81	54	4.2

The SURGEON-GENERAL.

JAPAN.

Report from Yokohama.

During the week ended February 28, 1903, 5 vessels, having an aggregate personnel of 467 crew and 536 passengers, were inspected, 329 steerage passengers were bathed, and 585 pieces of baggage were disinfected. To one vessel a bill of health was granted without inspection. One steerage passenger suffering from measles was rejected. During the same period cases of infectious diseases were officially notified in Yokohama as follows: Enteric fever, 2 cases, no deaths; diphtheria, 3 cases, no deaths; dysentery, 1 case, no deaths.

The SURGEON-GENERAL.

MEXICO.

Sanitary conditions of Ensenada.

Acting Assistant Surgeon Alexander reports, March 18, as follows:

The sanitary conditions of Ensenada continue excellent. There has been no case suspicious of plague since January 9. The deaths during March are 2, a child with bronchitis and an adult with general tuberculosis. There has been positively no travel from lower coast.

The SURGEON-GENERAL.

Report from Mazatlan. No new plague cases during week ended March 27.

Consul Kaiser reports, March 28, as follows:

No deaths; no new cases; in pest house, nineteen; people returning.

The SECRETARY OF STATE.

PHILIPPINE ISLANDS.

Plague and smallpox in Manila—Smallpox in the Provinces.

Passed Assistant Surgeon Perry, chief quarantine officer for the Philippine Islands, reports, February 14, as follows: Two cases of plague, both Filipinos, occurred in Manila during the week ended February 7, 1903. During the same period there was 1 case of smallpox in Manila. As yet the latter disease has not prevailed to any extent in this city during the present season, but it is widely disseminated throughout the islands, and in a number of places severe epidemics are prevailing.

Cholera report, Manila.

Week ended February 7, 1903. No cases, no deaths.

Report of cholera occurring in provincial towns in the Philippine Islands for the week ended February 7, 1903.

Cholera in Cebu—Probable conveyance of infection by bancas.

Assistant Surgeon Stansfield reports, February 12, as follows: I have the honor to report cholera present in Cebu. One case was discovered in town on February 9. The patient is a resident of the town, and the source of infection not ascertainable. A case was found on a banca on the morning of the 10th. Two more cases developed on the same banca later in the day. This banca came from Palompon, Leyte, but had been in port six days before any sickness appeared. No cholera has been reported in Palompon. Cholera was reported in Talisay, a small town 3 miles from Cebu, on February 9. The disease had been present for ten days, but not reported to the president of the board of health before. Their infection came from the island of Bohol, the presidente stating that 6 cases had come in this way. These cases were not quarantined on arrival at Talisay. In this connection I wish to state that I think bancas frequently slip into these small towns along the coast to avoid quarantine, and that there is no possible way to prevent this.

THE CHIEF QUARANTINE OFFICER FOR THE PHILIPPINES.

The SURGEON-GENERAL.

WEST INDIES.

Report from Guadeloupe—Two local types of fever.

Consul Ayme reports, February 22, as follows: I have the honor to submit the following report on two types of fever which are said to be peculiar to this colony, at least in this hemisphere. It is said that similar fevers are found in some parts of the African littoral.

These fevers are confined to white children between the ages of 1½ and 12 years, although there have been rare instances in which children 14 years of age have been attacked. These fevers are called fever with black vomit and fever with black urine. A more accurate nomenclature would be fever with either gastric or cystic hemorrhages.

They are peculiar and confined to Grande Terre or the low, calcareous part of the island. They are also met with in Marie Galante, a low, calcareous island. In Guadeloupe proper, high ground of volcanic origin, these fevers are unknown, and patients removed there in time usually recover promptly. The fever, with gastric hemorrhages, attacks girls more than boys. It appears to be neither infectious nor contagious. All children of whites do not seem to be equally subject to it. It appears to be inherited, or at least a tendency toward it appears to exist in certain families, all children of these families suffering from it. Children who are strong and healthy seem to be attacked more frequently than those who are weakly. It is usually fatal, cures not exceeding 20 per cent of cases. Its duration is from two to four days. It appears to be a sort of paludic fever. There are no premonitory symptoms.

The child attacked by this disease is found to be suffering from an apparently light attack of ordinary fever, the temperature being about 98° F. The temperature rises very slowly and rarely reaches 104° F. In the great majority of cases the temperature remains pretty constantly about 100° F. The first positive indication of the disease is found in the presence, in matter vomited, of dark specks and streaks which the guaiacum test reveals to be blood. As the disease progresses large quantities of partly digested blood, of a chocolate brown color, are vomited, whence the popular name of the disease. Later there are frequently great quantities of pure blood vomited. The patient dies either from anæmia or syncope.

The treatment, when the presence of blood clots is established, consists in the administration of quinine, often hypodermically; exhibition of antipyrine; ice bags over the abdomen; hypodermic injections of ergotine; removal to high land, when possible.

One attack does not give immunity to subsequent attacks; indeed, in certain families in which predisposition to this fever seems to be found children have constantly recurring attacks. Negro children never suffer from the disease, and the children of mixed unions, mulattoes, very rarely and always from a mild type, readily yielding to treatment. No data are accessible as to the liability of white children of foreign birth, as there are few or none in the colony. The disease is not more prevalent at one time of the year than at any other.

The other type of fever is much similar to that just described, except that the hemorrhages are cystic in origin and that more boys than girls are attacked by it. It is also more frequent and somewhat less fatal than the former. Apparently no evil after results are found when the age of 12 is passed. I can find no record of any necropsis having been made in either type.

The ASSISTANT SECRETARY OF STATE.

Foreign and insular statistical reports of countries and cities—Yearly and monthly.

AFRICA—Lourenço Marquez.—Month of January, 1903. Estimated population, 7,000. Total number of deaths 49, including enteric fever 1, and 4 from phthisis pulmonalis.

Sierra Leone.—Weeks ended February 6 and 20. Estimated population, 40,000. Total number of deaths, 16 and 13, respectively. No contagious diseases.

BAHAMAS—Dunmore Town.—Two weeks ended March 16, 1903. Estimated population, 1,232. One death. No contagious diseases.

Governors Harbor.—Two weeks ended March 14, 1903. Estimated population, 1,500. No deaths and no contagious diseases.

Green Turtle Cay, Abaco.—Two weeks ended March 14, 1903. Estimated population, 3,314. No deaths and no contagious diseases.

Nassau.—Two weeks ended March 18, 1903. Estimated population, 12,535. Number of deaths not reported. No contagious diseases reported.

AUSTRALIA—New South Wales—New Castle.—Month of January, 1903. Estimated population, 48,535. Total number of deaths, 55, including enteric fever 1, whooping cough 1, and 6 from tuberculosis.

Sydney.—Month of January, 1903. Estimated population, 383,386. Total number of deaths, 548, including diphtheria 4, enteric fever 8, scarlet fever 6, whooping cough 3, and 54 from tuberculosis.

Queensland—Brisbane.—Month of December, 1902. Estimated population, 119,428. Total number of deaths, 144; including 2 from enteric fever.

CUBA—*Habana*.—Month of January, 1903. Estimated population, 236,000. Total number of deaths, 474; including diphtheria 4, enteric fever 4, whooping cough 1, and 93 from tuberculosis.

FORMOSA.—Period from July 1 to December 31, 1902, inclusive. Estimated population, 2,797,543. Total number of deaths not reported. One death from diphtheria, typhus 28, dysentery 166, and 265 from plague. The greatest prevalence of plague was in July, August, and December, the number of deaths being 126, 47, and 75, respectively.

FRANCE—*Roubaix*.—Month of February, 1903. Estimated population, 124,660. Total number of deaths, 173; including diphtheria 1, whooping cough 4, and 6 from smallpox.

GERMANY—*Weimar*.—Month of February, 1903. Estimated population, 30,042. Total number of deaths, 29; including 1 from enteric fever.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 76 great towns in England and Wales during the week ended March 7, 1903, correspond to an annual rate of 16.6 per 1,000 of the aggregate population, which is estimated at 15,075,011.

Bradford.—Two weeks ended January 31, 1903. Estimated population, 281,770. Total number of deaths, 203, including diphtheria 3, enteric fever 1, scarlet fever 1, whooping cough 8, and 15 from tuberculosis. Month of February, 1903. Total number of deaths, 385, including diphtheria 13, enteric fever 1, scarlet fever 1, whooping cough 11, and 25 from tuberculosis.

London.—One thousand four hundred and fifty deaths were registered during the week, including measles 68, scarlet fever 7, diphtheria 17, whooping cough 65, enteric fever 5, and diarrhea 15. The deaths from all causes correspond to an annual rate of 16.4 per 1,000. In Greater London 1,944 deaths were registered. In the "outer ring" the deaths included 5 from diphtheria, 1 from measles, 12 from whooping cough, smallpox 2, and 4 from diarrhea.

Ireland.—The average annual death rate represented by the deaths registered during the week ended March 7, 1903, in the 21 principal town districts of Ireland was 25.4 per 1,000 of the population, which is estimated at 1,093,289. The lowest rate was recorded in Dundalk, viz, 4.0, and the highest in Armagh; viz, 41.2 per 1,000. In Dublin and suburbs 211 deaths were registered, including diphtheria 1, enteric fever 1, measles 1, scarlet fever 2, whooping cough 3, and 49 from tuberculosis.

Scotland.—The deaths registered in 8 principal towns during the week ended March 7, 1903, correspond to an annual rate of 18.5 per 1,000 of the population, which is estimated at 1,702,912. The lowest mortality was recorded in Paisley, viz, 13.2, and the highest in Edinburgh, viz, 22.1 per 1,000. The aggregate number of deaths

registered from all causes was 606, including diphtheria 1, measles 15, scarlet fever 4, and 32 from whooping cough.

JAMAICA—Kingston.—Month of February, 1903. Estimated population, 46,542. Total number of deaths, 84, including 19 from phthisis pulmonalis.

Port Antonio.—Three weeks ended March 14, 1903. Estimated population not reported. Number of deaths not reported. No contagious diseases.

JAPAN—Nagasaki.—Ten days ended February 20, 1903. Estimated population, 131,700. Total number of deaths not reported. One death from diphtheria and 1 from enteric fever reported.

MALTA.—Two weeks ended February 21, 1903. Estimated population, 189,749. Total number of deaths, 238, including 6 from measles.

NORFOLK ISLAND.—Month of January, 1903. Estimated population, 971. Total number of deaths, 5, including 4 from epidemic dysentery at the Melanesion Mission Station.

PORTO RICO.—Month of February, 1903. Census population, 953,947. Total number of deaths, 1,894, including diphtheria 1, enteric fever 2, and 117 from tuberculosis.

Cholera, yellow fever, plague, and smallpox, December 27, 1902, to April 3, 1903.

[Reports received by the Surgeon-General Public Health and Marine-Hospital Service from United States consuls through the Department of State and from other sources.]

[For reports received from June 28, 1902, to December 26, 1902, see PUBLIC HEALTH REPORTS for December 26, 1902.]
