FOREIGN AND INSULAR.

ARABIA.

Reduction of quarantine period.

Vice-Consul W. H. Lockerman reports from Aden, December 10, 1902, that the quarantine between Aden and Hodeidah has been reduced to five days by the international sanitary board at Constantinople.

CANADA.

Inspection of immigrants at Quebec.

Asst. Surg. W. C. Billings reports, December 23, as follows: Week ended Saturday, December 20, number inspected, 44; number passed, 41; number detained, 3. The comparatively small number of immigrants inspected during the week is due to the fact that there are now some 600 of the steamship *Lake Champlain's* steerage passengers detained at quarantine.

The SURGEON-GENERAL.

CHINA.

Report from Hongkong.

Asst. Surg. John D. Kerr reports, November 25, 1902, as follows: During the week ended November 22, 1902, 6 vessels were inspected, 493 individuals were bathed at the disinfecting station and 546 pieces of baggage were disinfected. There was 1 rejection during the week because of fever. The sanitary returns for the week show that there were 2 cases of enteric fever reported, otherwise there were no cases of communicable disease in the colony. The mortality statistics, as published in the Hongkong Government Gazette, show a total of 497 deaths during the month of October, 1902. The total deaths among the British and foreign population were 25, a death rate of 28.1 per 1,000 per annum. The death rate among the Chinese land population was 19.4 per 1,000 per annum and the death rate among the harbor population was 18.5 per 1,000 per annum. Of the total deaths, 2 were due to cholera, 27 to diarrhea, 15 to dysentery, 2 to plague, 41 to malaria, and 52 to beriberi. Nine were due to general tuberculosis, 1 to leprosy, 10 to meningitis, 23 to tetanus, 25 to bronchitis, 25 to pneumonia, and 56 to phthisis.

The SURGEON-GENERAL.

CUBA.

Reports from Havana.

DECEMBER 24, 1902.

Asst. Surg. F. E. Trotter reports as follows for the week ended December 20, 1902:

Number of vessels inspected and issued bills of health, 22; crews of outgoing vessels, inspected, 919; passengers of outgoing vessels inspected, 360; health certificates issued, 105; pieces of baggage inspected, 92; pieces of express matter inspected, 35; pieces of freight inspected, 2,999.

The SURGEON-GENERAL.

DECEMBER 30, 1902.

Week ended December 27, 1902. Number of vessels inspected and issued bills of health, 16; crews of outgoing vessels inspected, 585; passengers of outgoing vessels inspected, 234; health certificates issued, 48; pieces of baggage inspected, 40; pieces of baggage disinfected, 4; pieces of express matter inspected, 11; pieces of freight inspected, 577.

The SURGEON-GENERAL.

GERMANY.

Health of Berlin and weekly death rate.

DECEMBER 22, 1902.

Consul-General Mason reports as follows: During the week ended December 6, the death rate of Berlin was lower than that of the foregoing week, amounting to 15.5 per 1,000 of the inhabitants, but was thus somewhat higher than that for the corresponding week of last year, which only amounted to 15.2 per 1,000. Of the large German cities, Leipzig, Braunschweig, Hanover, Frankfurt-on-the-Main, Charlottenburg (with 12.8 per 1,000), and Schoneberg (with 8.8) showed somewhat more favorable statistics than Berlin, but Magdeburg, Dresden, Breslau, Hamburg, Cologne, Munich, as well as London, Paris, and Vienna, all had considerably higher death rates than Berlin in the week in question. There was a slight decrease in the number of deaths among children in their first year. The mortality rate among infants, 4.0 per 1,000, was but the half of that of Danzig, Stettin, Chemnitz, and Munich. Acute intestinal diseases were of somewhat more frequent occurrence during this week than in the first weeks of November, and caused 33 deaths. There was no change in the number of deaths from diseases of the respiratory organs, which claimed 66 victims during this week, among these being 4 deaths in consequence of influenza. There was, however, a decrease in the number of deaths from consumption, which amounted this week to 75. Cases of scarlet fever and of diphtheria were less frequent, the former causing 6, the latter 5 deaths. There was also a decrease in the number of deaths from measles, this disease claiming 5 deaths this week. Finally, 13 persons died by violence.

DECEMBER 24, 1902.

During the week ended December 13, the death rate of Berlin was higher than it has been since the beginning of June, amounting to 17 per 1,000 of the inhabitants as compared with 15.5 in the foregoing week, and was therefore higher than for the corresponding week of last year. In consequence of the almost general and considerable increase in the mortality, two-thirds of the large German towns showed less favorable sanitary conditions than Berlin. The increase in the number of deaths was far more noticeable among the higher age classes than among children in their first year. The death rate of Munich, Breslau, Cologne, and Leipzig was much higher than that of Berlin, while the mortality in Hamburg, Stuttgart, and Koenigsberg was higher still, the figures for the last two cities amounting to double those of Berlin. The health conditions in London, Paris, and Vienna were also considerably less favorable than those of Berlin. The mortality rate among infants rose from 4 in the foregoing week to 4.3 in this week, but thereby reached only the half of the rate in Stuttgart, Munich, Nuremberg, and Chemnitz. Acute intestinal diseases were of more frequent occurrence during this week than since the end of Octo-

ber, and caused 37 deaths. Cases of acute diseases of the respiratory organs were likewise more numerous, and claimed 71 victims. There were registered 4 deaths from influenza. Consumption caused 87 deaths, a considerable increase over the figures of the foregoing week. Cases of measles were more numerous, of scarlet fever less frequent, the former causing 6, the latter 4 deaths. The number of cases of diphtheria remained the same, 2 of them ending in death. Six persons died by violence, this being the lowest number of any week during the present quarter.

Plague and cholera.

BRITISH INDIA.—In Calcutta during the week ended November 15, 6 persons died of plague and 24 persons died of cholera.

Cholera.

TURKEY.—According to a report from Amman, dated November 25, there were registered on that date 13 new cases of cholera (5 among the railroad workmen and 8 among the inhabitants), with 8 deaths (2 among railroad workmen and 6 among the inhabitants).

According to the sixth official bulletin (dated December 2), regarding cholera in Palestine, there were registered between November 24 and November 30, in Jaffa, 135 cholera cases with 56 deaths; in Hauran, 42 cases between November 18 and November 28. In Szakie (Djeblija), according to a telegram dated November 25, there occurred during the last forty days, 200 cases of cholera with 70 deaths. According to the sixth bulletin, published up to December 2, there occurred therefore 192 deaths from cholera in Jaffa, 188 deaths in Tiberias, and in other places in Palestine 1,820 deaths from cholera, making a total of 2,200 deaths from this disease since the beginning of October.

Spread of tuberculosis and preventive measures against it.

[Extract from the Gesundheitsbüchlein, published by the imperial health office, Berlin, Germany.]

DECEMBER 24, 1902.

Since Robert Koch discovered the bacillus tuberculosis, much more reliable data has been obtained as to the way in which the disease is disseminated. Although it is well known that a predisposition to tuberculosis is transmitted from parents to children, and that an ordinary cold may prepare the way for phthisis, the cause of the infection is now generally sought in the transmission of living germs. It has been demonstrated that these germs pass out of the patients' bodies with their excretions (sputa, excreta from the bowels, etc.) and still retain their power of infection, so that the danger of conveying the disease still exists a long time after they have dried. These germs have been discovered in the dust of sleeping apartments and other rooms used by patients suffering with tuberculosis, and many cases of this disease have thus been traced from living with such patients or among the occupiers of dwellings formerly tenanted by them. It is now known that murrain, a common disease among cattle, is in reality tuberculosis, and it has, therefore, been claimed that the disease is spread among children by the milk of diseased cows.

In view of the above facts, it is advisable that the excretions of tubercular patients should be rendered innocuous; that the danger arising

from the intercourse of such patients with healthy persons should be avoided as much as possible, and that the use of milk containing tubercle bacilli should be prohibited. To accomplish these objects the following rules should be carried out:

1. All persons, but particularly those suffering with tuberculosis, should deposit their sputum in spittoons. These vessels should contain either liquids which will prevent the sputa from becoming dry and turning to dust, or substances which are readily burned, such as sawdust. They should be cleared at least once daily, and the contents rendered innocuous by combustion or disinfection. When it is not possible to use a spittoon, in walking through the streets for example, patients should carry little bottles with them for the reception of sputum. They should not expectorate upon the ground or into pocket handkerchiefs.

2. Patients' linen and utensils should be thoroughly boiled after use. Their rooms should be disinfected before being occupied by other people.

3. Rooms occupied by consumptives should be kept free from dust.

4. Consumptives and healthy persons should not be allowed to sleep in the same rooms or beds, and the employment of persons suffering with tuberculosis in cooking or selling of food, cigars, etc., should be avoided as far as possible. Where consumptives are obliged to work with healthy people, the foreman of the works should make the observance of the first rule obligatory on all work-people.

5. The sale of the milk of tubercular cows should be prohibited. It is not advisable to drink unboiled milk unless it can be obtained from an absolutely reliable source.

The SURGEON-GENERAL.

HAWAIIAN ISLANDS.

Monthly report.

HONOLULU, H. I., *December 10, 1902.*

SIR: I have the honor to transmit the following report of quarantine transactions in the Hawaiian Islands for the month of November, 1902:

Port of Honolulu—Incoming quarantine.—Number of vessels inspected from foreign ports, 16; domestic ports, 18; number of crew inspected, 3,332; cabin passengers inspected, 740; steerage passengers and stowaways inspected, 3,890; sick in detention from last month, none; number in detention from last month, none; sick in detention for this month, none; number in detention for this month, none; pieces of baggage disinfected, none; packages of freight disinfected, none.

Port of Hilo.—Number of vessels inspected, 4; crew inspected, 40; passengers inspected, 9; vessels remanded, none.

Port of Kahului.—Number of vessels inspected, none; crew inspected, none; passengers inspected, none; vessels remanded, none.

Port of Kihai.—Number of vessels inspected, 1; crew inspected, 18; passengers inspected, none; vessels remanded, none.

Port of Koloa.—Number of vessels inspected, none; crew inspected, none; passengers inspected, none; vessels remanded, none.

Port of Lahaina.—Number of vessels inspected, none; crew inspected, none; passengers inspected, none; vessels remanded, none.

Respectfully,

L. E. COFER,

Passed Assistant Surgeon, Chief Quarantine Officer, Hawaii.

The SURGEON-GENERAL.

ITALY.

*Reports from Naples.*NAPLES, ITALY, *December 15, 1902.*

P. A. Surg. J. M. Eager reports as follows: For the week ended December 13, 1902, the following ships were inspected at Naples: December 10, the steamship *Citta di Milano*, bound with passengers and cargo for New York. There were inspected and passed 478 steerage passengers and 231 pieces of large baggage; 395 pieces of baggage were disinfected by steam. The rejection of 32 steerage passengers was advised. December 11, the steamship *Trave*, bound with passengers and cargo for New York. There were inspected and passed 576 steerage passengers and 245 pieces of large baggage; 453 pieces of baggage were disinfected by steam. The rejection of 32 steerage passengers was advised.

Inspection at Palermo.

At Palermo for the week ended December 13, 1902, the following ship was inspected: December 7, the steamship *Napolitan Prince*, bound with passengers and cargo for New York. There were inspected and passed 278 steerage passengers; 299 pieces of baggage were disinfected by steam. The rejection of 29 steerage passengers was advised.

Asiatic cholera in Egypt.

Cholera returns from Egypt show that there were 8 cases under treatment December 8, and that the number of cases under treatment had increased to 18, December 12.

Asiatic cholera in Palestine.

Reports dated December 7 showed a decrease of cholera at Jaffa. During the week ended December 6 there were 51 cases and 30 deaths. In the villages in the neighborhood of Jaffa there are scattered cases. There are no cases under treatment at Jerusalem.

The SURGEON-GENERAL.

NAPLES, ITALY, *December 22, 1902.*

Week ended December 20, 1902, the following ships were inspected at Naples: December 16, the steamship *Hesperia*, bound with passengers and cargo for New York. There were inspected and passed 463 steerage passengers and 120 pieces of large baggage; 400 pieces of baggage were disinfected by steam. The rejection of 26 steerage passengers was advised. December 17, the steamship *Liguria*, bound with passengers and cargo for New York. There were inspected and passed 486 steerage passengers and 82 pieces of large baggage; 600 pieces of baggage were disinfected by steam. The rejection of 42 steerage passengers was advised.

Asiatic cholera in Egypt.

Reports from Cairo, dated December 15, 1902, show that, on that date there were 17 cases of Asiatic cholera still under treatment in Egypt. All these cases were at Alexandria.

Bubonic plague in Mauritius.

The reports of the governor of Mauritius show that, for the week ended December 11, 1902, there were 23 cases of bubonic plague at Mauritius with 16 deaths.

The SURGEON-GENERAL.

JAPAN.

Reports from Yokohama.

Asst. Surg. Dunlap Moore reports December 4, as follows: During the week ended November 29, 1902, 3 vessels, having a total personnel of 274 crew and 657 passengers, were inspected; 474 steerage passengers were bathed and their body clothing disinfected by steam; also 659 pieces of baggage were disinfected by formaldehyde.

The official return of infectious diseases in Yokohama for the above period shows: Enteric fever, 7 cases, no deaths; diphtheria, 5 cases, 2 deaths; dysentery, 1 case, no deaths. This city remains free from cholera and plague.

DECEMBER 11, 1902.

Week ended December 6, 1902, 6 vessels, having a total personnel of 425 crew and 483 passengers, were inspected; 334 steerage passengers were bathed, their body clothing being disinfected by steam; also, 432 pieces of baggage were disinfected. A new disinfecting plant is now in operation and is in many respects an improvement on the old one, one of its features being a small steam chamber.

Infectious diseases, as follows, were reported in Yokohama during the past week: Enteric fever, 3 cases, 2 deaths; diphtheria, 3 cases, 2 deaths; dysentery, 2 cases, no deaths.

The SURGEON-GENERAL.

MALTA.

Quarantine laws.

Consul John H. Grout, at Malta, transmits the following:

VALETTA, MALTA, *December 8, 1902.*

By proclamation issued through the medium of the Malta Government Gazette, the quarantine restrictions hitherto placed by the authorities of Malta against Port Said and Suez have been removed. Vessels may now coal and provision at either of the two ports en route through the canal. Following is the proclamation:

GOVERNMENT NOTICE.

His excellency the governor, having heard the opinion of the council of health, has been pleased to repeal government notice No. 270 of November 26, 1902, and to direct that the following regulations be observed as regards vessels and passengers, viz:

Infected places.

1. The following countries are, for purposes of quarantine, to be treated as infected:
 - a. Arabia (excepting Perim and Aden).
 - b. China.
 - c. Egypt (excepting Port Said and Suez).
 - d. India.
 - e. Odessa.
2. And the following ports:
 - a. Ports in the Persian Gulf.
 - b. Syria, between Sur and Port Said (exclusive of the latter port).

Infected vessels.

3. Infected vessels are vessels which have, or have had, on board, during the voyage or the preceding twenty days, cases of cholera, yellow fever, plague, or any disease with symptoms which, in the opinion of the chief government medical officer, resemble the symptoms of the said diseases.

Vessels which are not allowed to enter the harbor, but are allowed to communicate with quarantine establishments.

4. Infected vessels.
5. Vessels with pilgrims from the East, when not carrying a recognized medical officer.
6. Vessels from infected places, when not carrying a recognized medical officer.

Vessels allowed to load in quarantine.

7. Vessels arriving at Malta without a clean bill of health.
8. Infected vessels when carrying a recognized medical officer and not having on board an actual case of the disease mentioned in paragraph 3 on board.
9. Vessels from infected places not having on board an actual case of the diseases mentioned in paragraph 3 when arriving within ten days from departure.
10. Vessels with pilgrims from the East when carrying a recognized medical officer.

Vessels from infected places admitted to pratique.

11. Vessels without a clean bill of health, or from infected places, will be admitted to pratique after ten days from date of departure.

Medical inspection.

12. All vessels and passengers on arrival are subject to medical inspection.

Passengers.

13. Passengers, before landing, must declare on oath before a marine police officer that they have not been in or have not communicated with an infected place within the last ten days. Otherwise they shall remain in quarantine to complete ten days from departure.

14. Passengers arriving on vessels without a clean bill of health shall complete ten days' quarantine from departure.

15. Passengers arriving from infected places after ten days from date of departure are allowed to land in free pratique after strict medical inspection and thorough disinfection of their persons, effects, and luggage, if the inspecting medical officer is satisfied that they are in good health.

16. Passengers not otherwise provided for are subjected to the restrictions applicable to the vessels on which they arrive.

17. When twenty days have elapsed from the last case of plague, cholera, or other disease against which restrictions have been in force with regard to a country or place declared to be an infected place, a notice will be issued by the collector of customs to the effect that the place or port is no longer to be dealt with as infected.

N. B.—Vessels that carry a doctor and pass through the Suez Canal without taking on board either cargo or passengers will not be considered infected by contact with canal pilots taken on board from a disinfecting station or by coaling and provisioning at Port Said or Suez under restrictions approved by the chief Government medical officer.

The word "passengers," as used in this notice, includes the crew.

By command,

E. M. MEREWETHER,

Lieutenant-Governor and Chief Secretary to Government.

PALACE, VALLETTA, December 6, 1902.

MEXICO.

Plague at Ensenada and Mazatlan.

Dr. Liceaga, of the Mexican superior board of health, declares, December 31, 1902, the presence of plague at Ensenada and Mazatlan.

Few reports have been received from the provinces during this period on account of break in telegraphic communications, and therefore the data given is not a true index of the prevalence of cholera outside of Manila.

Foreign and insular statistical reports of countries and cities—Yearly and monthly.

AFRICA—Sierra Leone.—Week ended November 14, 1902. Estimated population, 40,000. Total number of deaths, 11. No contagious diseases.

Week ended December 6, 1902. Total number of deaths, 12. No contagious diseases.

ARGENTINA—Buenos Ayres.—Month of October, 1902. Estimated population, 864,359. Total number of deaths, 1,234, including diphtheria, 9; enteric fever, 5; measles, 4; scarlet fever, 6; smallpox, 12, and 172 from tuberculosis.

BAHAMAS—Dunmore Town.—Two weeks ended December 19, 1902. Estimated population, 1,232. No deaths and no contagious diseases.

Governors Harbor.—Week ended December 20, 1902. Estimated population, 1,500. No deaths and no contagious diseases.

Green Turtle Cay—Abaco.—Two weeks ended December 17, 1902. Estimated population, 3,314. No deaths and no contagious diseases.

Nassau.—Two weeks ended December 22, 1902. Estimated population, 13,601. Number of deaths not reported. No contagious diseases reported.

CUBA—Havana.—Month of November, 1902. Estimated population, 275,000. Total number of deaths, 418, including diphtheria, 1; enteric fever, 5, and 86 from tuberculosis.

DUTCH GUIANA—Paramaribo.—Month of November, 1902. Estimated population, 31,626. Total number of deaths, 67. No contagious diseases reported.

FRANCE—Marseille.—Month of November, 1902. Estimated population, 491,161. Total number of deaths, 962, including diphtheria, 6; enteric fever, 23; measles, 7; scarlet fever, 1; whooping cough, 1; smallpox, 37, and 96 from phthisis pulmonalis.

GERMANY—Hanover.—Month of October, 1902. Estimated population, 245,099. Total number of deaths, 300, including 22 from infectious diseases.

Weimar.—Month of November, 1902. Estimated population, 29,116. Total number of deaths, 33, including 1 from diphtheria.

GIBRALTAR.—Four weeks ended December 14, 1902. Estimated population, 27,460. Total number of deaths, 24, including diphtheria, 1, and 1 from enteric fever.

GREAT BRITAIN—England and Wales.—The deaths registered in 76 great towns in England and Wales during the week ended December 13, 1902, correspond to an annual rate of 19.6 per 1,000 of the aggregate population, which is estimated at 14,862,880.

Bradford.—Two weeks ended December 13, 1902. Estimated population, 281,770. Total number of deaths, 169, including diphtheria, 4; enteric fever, 3; whooping cough, 3, and 12 from tuberculosis.

London.—One thousand six hundred and eighty-two deaths were registered during the week, including measles, 60 ; scarlet fever, 10 ; diphtheria, 27 ; whooping cough, 31 ; enteric fever, 12, and diarrhea, 12.
