

PUBLIC HEALTH REPORTS.

UNITED STATES.

[Reports to the Surgeon-General, Public Health and Marine-Hospital Service.]

Case suspected of being plague on steamship Coronation from Soerabaya, Java, bound for Delaware Breakwater.

Cable message.

[Received by telephone from State Department 2.20 p. m., November 26, 1904.]

GIBRALTAR, *November 14, 1904.*

The British steamer *Coronation*, from Soerabaya, bound for Delaware Breakwater with suspected case of plague aboard. The *Coronation* was not allowed to communicate with this port, and, after taking on a supply of coal, left yesterday evening in strict quarantine for Delaware Breakwater.

SPRAGUE.

Summary of work in Chinatown, San Francisco, for the week ended November 19, 1904.

Passed Assistant Surgeon Currie reports as follows:

Detailed statement of the joint inspection of the Chinese and Japanese districts of San Francisco for the week ended November 19, 1904.

Buildings reinspected.....	273
Rooms reinspected.....	2,079
Persons inspected.....	2,849
Sick inspected.....	23
Sick prescribed for at Oriental Dispensary.....	13
Dead examined.....	6
Necropsies.....	1
Rats examined bacteriologically.....	51
Number showing pest infection.....	0
Places limed and disinfected.....	1,031
Number blocks covered with Danysz's virus.....	20
Times streets swept.....	3
Sewers flushed.....	16
Notices sent to abate plumbing nuisances.....	5
Plumbing nuisances abated.....	2
Plumbing nuisances undergoing abatement.....	3
Total number of plumbing inspections.....	79

Report on rats from city wharf and Chinese, Japanese, and Latin Quarters, examined during the week ended November 19, 1904.

The following number of rats were examined during the week:

Caught alive	44
Found dead	7
Showing lesions of phosphorus poisoning	0
Showing pest infection	0
Showing infection with Danysz's bacillus (<i>B. typhi murium</i>)	2

TRANSACTIONS ON ACCOUNT OF YELLOW FEVER AT LAREDO, TEX.

Health conditions about Laredo—Mosquitoes increasing.

Acting Assistant Surgeon Frick reports, November 19, as follows:

Regarding the present sanitary situation of Laredo little, if any, attention is being paid by the city authorities toward preventing an increase of the mosquito.

Would state, however, that many of the laity noticed the immediate increase of the mosquito following the discontinuance of active operations by the Service toward the prevention and destruction of the mosquito, and have continued to use the barrel screens that the Service distributed among them last summer, though I see many barrels without screens, and while I can not, of my own knowledge, state that such unprotected water barrels have "wiggle-tails" in them, I am informed that such is frequently the case; the fact that the adult mosquito is found everywhere, and of the *Stygomia* variety, while not in any large numbers, shows that many breeding places of this character must exist.

Frequent rains during the latter part of September, the whole of October, and the fore part of November have by the overflowing of water containers and arroyos (creeks) to some extent prevented a larger increase of the mosquito.

About ten days ago I made an inspection of the arroyo Zacata and found the conditions negative; two days ago I made a second inspection of this arroyo and found larvæ in abundance, mostly of the anopheles variety, some few culex, and, as I thought, a solitary *stegomyia*, but of the latter I am not sure, as I had but a momentary view of this larva.

In conclusion, would state that during my inspection of the arroyo Zacata I found no pupæ, this I believe being due to the fact that we have been having a somewhat lower atmospheric temperature and consequently a medium of a lower temperature for the insect to develop in. With the present higher temperature this, however, must all change, and we may look for a much larger increase of the anopheles from the arroyo Zacata, as well as a larger number of the *stegomyiæ* from their different breeding places throughout the town. We must also expect many of the mosquitoes to remain with us during our mild winters in this section, occasionally depositing their ova to add to those already developed, and to become more active in the early spring and causing this section to once more become a very highly infectable territory; the *stegomyia* to transmit yellow fever; the anopheles to transmit malaria (the frequency of which, in this section, for years to come, will cause many annoying rumors, as occurred during the past summer, to the prejudice of the section as well as to the injury of commerce and travel); and if the theory is correct, the culex to transmit dengue, and should any of these dengue cases fail to show an eruption, a probable diagnosis of yellow fever might be the result.

INSPECTION SERVICE MEXICAN BORDER.

Inspection at Eagle Pass, Tex.

Acting Assistant Surgeon Hume reports as follows:

	Week ended Nov. 19.
Persons inspected on trains	1,593
Persons held	0
Pullman cars fumigated	7

Bags of Pullman linen disinfected, 28.
Inspected on footbridge, 3,605 persons.

Inspection at El Paso, Tex.

Acting Assistant Surgeon Alexander reports as follows:
Week ended November 19, 1904.

Inspection of Mexican Central passengers	227
Inspection of Mexican Central immigrants	69
Inspection of Syrian	1
Inspection of special Pullman passengers.....	14
Disinfection of soiled linen for laundry work, pieces	297
Vaccination of immigrant children	11

Examination of number of aliens not given in this report, an acting assistant surgeon having been appointed to do such work, and he will probably report an account.

Inspection at Laredo, Tex.

Acting Assistant Surgeon Hamilton reports, through Acting Assistant Surgeon Frick, as follows:

Week ended November 19, 1904: Passenger trains from Mexico inspected, 15; persons on trains inspected, 561; immigrants inspected on trains, 20; immigrants vaccinated upon entry, 11; Pullman coaches disinfected, 15.

Inspection at Nogales, Ariz.

Acting Assistant Surgeon Gustetter reports as follows:

Week ended November 19, 1904: Passengers inspected, 196; immigrants inspected, 55; deported (Chinese), 2.

Statistical Reports of States and Cities of the United States, Yearly and Monthly.

CALIFORNIA.—Reports to the State board of health for the month of October, 1904, from 32 localities having an aggregate population of 1,009,500 show a total of 1,313 deaths, including diphtheria, 15; enteric fever, 28; scarlet fever, 2; whooping cough, 7, and 170 from tuberculosis.

ILLINOIS—*Rockford*.—Month of October, 1904. Estimated population, 37,000. Total number of deaths 42, including enteric fever 1 and 3 from tuberculosis.

Springfield.—Month of October, 1904. Estimated population, 40,000. Total number of deaths 52, including enteric fever 2 and 4 from tuberculosis.

IOWA—*Davenport*.—Month of October, 1904. Estimated population, 40,000. Total number of deaths 41, including enteric fever 1 and 7 from tuberculosis.

Keokuk.—Month of October, 1904. Estimated population, 16,000. Total number of deaths, 19, including scarlet fever 1, and 3 from tuberculosis.

KANSAS—*Topeka*.—Reports to the State board of health for the six weeks ended November 15, 1904, from 12 localities, population unknown, show 11 deaths from diphtheria. There were no deaths reported from other diseases.

LOUISIANA—*New Orleans*.—Month of October, 1904. Estimated population, 317,000; white, 233,000; colored, 84,000. Total number of deaths, 505; white, 306; colored, 199, including diphtheria, 3; enteric fever, 10; whooping cough, 1; and 88 from tuberculosis.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended October 19, 1904, from 72 observers, indicate that dysentery, smallpox, cholera infantum, puerperal fever, measles, and inflammation of brain were more than usually prevalent, and diarrhea, phthisis pulmonalis, pneumonia, intermittent fever, diphtheria, erysipelas, remittent fever, cholera morbus, membranous croup, whooping cough, and meningitis were less than usually prevalent.

Meningitis was present at 1 place, whooping cough at 5, measles at 15, pneumonia at 24, diphtheria at 45, smallpox at 48, scarlet fever at 57, enteric fever at 88, and phthisis pulmonalis at 225 places.

Reports from the State board of health for the month of October from 170 cities, towns, and villages, having an aggregate population of 2,530,016, show a total of 2,565 deaths, including diphtheria 21, enteric fever 67, measles 4, scarlet fever 3, whooping cough 9, and 229 from tuberculosis.

The Monthly Bulletin of Vital Statistics states:

The total number of deaths returned to the office of the Secretary of State for the month of October was 2,565, corresponding to a rate of 12.0 per 1,000 population. This rate was lower than that for September (12.7), and also lower than that for the corresponding month for the previous year (12.5). By ages there were 483 deaths of infants under 1 year of age, 152 deaths of children aged 1 to 4 years, and 789 deaths of elderly persons aged 65 years and over.

Important causes of death were as follows: Tuberculosis of lungs, 195; other forms of tuberculosis, 34; typhoid fever, 67; diphtheria and croup, 27; scarlet fever, 3; measles, 4; whooping cough, 9; pneumonia, 109; diarrhea and enteritis, under 2 years, 168; cancer, 146; accidents and other violence, 195.

Deaths from pulmonary tuberculosis and pneumonia increased for October as compared with the preceding month, but there was a large diminution in the number reported from diarrheal diseases. Typhoid fever showed a very slight increase over September.

There were 2 deaths reported from smallpox during the month—1 in Bay City and 1 in Calhoun Township, Calhoun County.

Grand Rapids.—Month of October, 1904. Estimated population, 95,000. Total number of deaths 106, including diphtheria 1, enteric fever 6, and 6 from tuberculosis.

MINNESOTA—*Minneapolis*.—Month of October, 1904. Estimated population, 235,000. Total number of deaths 161, including diphtheria 4, enteric fever 1, and 20 from tuberculosis.

TENNESSEE—*Memphis*.—Month of September, 1904. Estimated population, 140,000—white, 76,000; colored, 64,000. Total number of deaths 168—white, 81; colored, 87, including diphtheria 1, enteric fever 10, whooping cough 1, and 16 from tuberculosis.

Month of October, 1904. Total number of deaths 181—white, 96; colored, 85, including diphtheria 1, enteric fever 5, and 25 from tuberculosis.

ARRIVAL OF IMMIGRANTS.

Report of immigration at Baltimore.

COMMISSIONER OF IMMIGRATION,
Baltimore, Md., November 26, 1904.

Number of alien immigrants who arrived at this port during the week ended November 26, 1904; also names of vessels and ports from which they came.

Date of arrival.	Vessel.	Where from.	Number of aliens.
Nov. 21	Cassel	Breman	779
22	Glad Tidings	Rio de Janeiro	1
23	Avalon	Port Antonio	2
	Total		782

Respectfully,

LOUIS T. WEIS, *Commissioner.*

Report of immigration at Boston.

OFFICE OF THE COMMISSIONER OF IMMIGRATION,
Boston, Mass., November 21, 1904.

Number of alien immigrants who arrived at this port during the week ended November 19, 1904; also names of vessels and ports from which they came.

Date of arrival.	Vessel.	Where from.	Number of immigrants.
Nov. 13	Admiral Dewey	Port Morant, Jamaica	4
14	Canopic	Italian Ports	515
15	Devonian	Liverpool, England	35
	Total		554

GEORGE B. BILLINGS, *Commissioner.*

Inspection of immigrants.

FOREIGN AND INSULAR.

ARABIA.

Cases suspected of being plague at Aden.

Consul Masterson reports, November 2, 1904, to the Assistant Secretary of State, as follows:

Within the last week there have been 6 suspicious cases of sickness at this place that the doctors regard as likely to be plague, yet quarantine has not been established, as there seems to be some question as to the disease being real plague. Four of the victims have died and the remaining ones are getting well.

I am making this report before the port has been officially declared plague infected because of the fact that last May, on the outbreak of the plague, even before the doctors had officially declared it so, there were some merchants that notified their firms in New York of an outbreak of plague here, and the news thus reached Washington before I had sent in my report on it, as I was waiting for an official report before I sent word to the Department. I shall make a report on this matter next week, and in case it is officially declared plague I shall notify the Department by cable.

AUSTRALIA.

Plague bulletins from Brisbane, Sydney, and Western Australia— Examination of rodents for plague infection—Western Australia and Queensland declared free from plague.

Consul-General Bray, at Melbourne, forwards the following reports:

DEPARTMENT OF PUBLIC HEALTH, QUEENSLAND, *Brisbane, October 1, 1904.*

The State of Western Australia has to-day been declared free from plague infection, and no further bulletins will be issued unless fresh cases unfortunately arise.

J. R. CAMPBELL, *Secretary.*

Western Australia and Queensland declared free from plague.

[Telegrams.]

COMMONWEALTH OF AUSTRALIA.

POST-OFFICE TELEGRAPHS,
Victoria, October 13, 1904.

CONSUL-GENERAL UNITED STATES, *Melbourne*: Western Australia declared free from plague 10th instant. Last case occurred 26th August.

G. H. REID.

COMMONWEALTH OF AUSTRALIA,
POST-OFFICE TELEGRAPHS, VICTORIA, *October 24, 1904.*
CONSUL-GENERAL UNITED STATES, *Melbourne*:

Have to inform you that Queensland was declared free from plague 22d instant. Last case 15th September.

G. H. REID.

BRAZIL.

Case suspected of being plague removed from S. S. Austria at Rio de Janeiro bound for Ship Island, Miss., via Barbados.

Acting Assistant Surgeon Stewart reports as follows November 1, 1904:

The British bark *Austria* left this port November 1 for Ship Island, Miss., via Barbados, for orders. This vessel I inspected yesterday and at inspection found a case suspicious of plague, and reported the fact to the authorities. The man was removed at once for observation, the fore-castle disinfected, clothing and bedding destroyed, etc.

CUBA.

Health report of the island of Cuba for July, 1904.

Chargé d'Affaires Sleeper reports to the Secretary of State as follows:

LEGATION OF THE UNITED STATES OF AMERICA,
Habana Cuba, November 9, 1904.

The total mortality in the district of Habana during July, 1904, amounted to 521, 53 less deaths than in the preceding thirty-one days, but 63 more than in the corresponding month of 1903. Infant mortality is the principal cause of this increase over last year, deaths of children under 5 years of age having risen from 148 in July, 1903, to 215 this year. The large percentage of infant mortality in Cuba has been frequently called to the attention of the Department in these reports.

The health of the island in general continues satisfactory. During July no cases of yellow fever nor of smallpox either originated on the island or were imported.

Seventy-four districts sent in their reports, representing an approximate population of 1,548,168, with 2,250 deaths, equivalent to an

annual death rate of 17.2 per thousand of population, a decrease of 1.9 over the preceding month. The births registered amounted to 6,229, thus showing a gain of about 4,000 in the population.

Concerning cases of yellow fever at Punta de Sal.

HABANA, November 24, 1904.

Surgeon-General WYMAN,

Public Health and Marine-Hospital Service, Washington, D. C.:

Since case of Fuller, notified last month, another mild case, Slater, who tended former [at] Punta de Sal, occurred 1st November. No other up to date. First Guiteras, afterwards Agramonte, besides disinfection personnel, sent both times from Habana.

FINLAY.

Report from Cienfuegos—Vessels inspected.

Acting Assistant Surgeon Marsillán reports November 22 as follows:

During the week ended November 19, 1904, three vessels were inspected at this port, and bills of health issued, with a total crew of 88, and 195 steerage passengers, in transit for Santiago de Cuba. All vessels were in good sanitary condition and no sickness. No quarantinable disease has been reported at this port during this week.

I heard that there is a case of scarlet fever at the town of Lajas, 27 miles distant from here, and a suspected case of diphtheria in this city.

Reports from Habana—Mortuary statistics.

Acting Assistant Surgeon Echemendia reports November 16 and 23 as follows:

Report of transactions during the week ended November 12, 1904:

Vessels inspected and bills of health issued.....	22
Passengers of outgoing vessels inspected.....	336
Crew of outgoing vessels inspected.....	819
Pieces of freight passed.....	875

The usual weekly mortuary of Habana is inclosed herewith.

Bronchitis	1
Cancer	2
Cachexia	3
Pneumonia	1
Typhoid fever	2
Enteritis	1

Total number of deaths, 82.

Report from Matanzas—Bills of health issued—Measles in the city—Mortuary statistics.

During the week ended November 19, 1904, bills of health were issued to 7 vessels bound for United States ports.

Eleven cases of measles have been reported in the city since my last writing. The source of the epidemic is supposed to be from the rural district of Corral Nuevo, within a short distance from the city. How the contagion was conveyed to the latter place and where it was originally derived from is yet to be determined. The last case of measles reported in the city previous to the present epidemic occurred about six months ago, in a child who had just arrived from Key West, but the case was properly isolated and no propagation of the disease was heard of or reported since that date. It is to be feared that the prevalence of measles during this time of the year, when changes of temperature are so frequent, by favoring the well-known pulmonary complications, will bring on a larger mortality than at any other season of the year.

No other quarantinable disease has been reported.

Mortuary statistics of Matanzas, November 10 to 20, 1904.

Causes of death.	Number of deaths.	Bertillon number.
Enteritis, infantile	2	105

Septicæmia, puerperal	1	137
Total	17	

Annual rate of mortality per 1,000, 12.94; estimated population, 48,000.

Report from Santiago—Quarantine of S. S. Craigneuk from Colon—Mortuary statistics.

During the week ended November 19, 1904, bills of health were issued to three vessels bound for the United States and one was

issued for Colon, Republic of Panama, this was to the U. S. army transport *Sumner*. On all of these I reported the condition of the port as good, and under "Remarks" I wrote the following: "One case of yellow fever at Punta de Sal, across the bay. Removed to the lazaretto at Cayo Duan. Discharged cured November 11."

One of these vessels, the steamship *Craigneuk*, arrived November 17, from Colon, with all well on board, but the bill of health from Colon, dated November 11, stated that there was 1 case of yellow fever at Colon, proceeding from Panama. On this account the vessel was fumigated by the Cuban authorities and ordered to be quarantined five days. After fumigation the vessel was allowed to go up to the wharf at Las Cruces (half a mile from the city) to load, but with the quarantine flag flying, and no communication was allowed with shore, except the captain. I made an additional note to this effect on this bill of health (No. 185). * * *

No quarantinable disease has been reported, but there were 2 cases of varicella in the jail; they were isolated. * * *

As the quarantine against Punta de Sal was removed on the morning of November 20, and as the second and last case of yellow fever was taken sick and removed to the lazaretto on November 2 and was discharged the 11th, I have thought it unnecessary to continue reporting this on the bills of health issued after the 20th.

I inclose the weekly abstract of bills of health issued and the mortality statistics for the week.

Mortuary report for Santiago de Cuba for the week ended November 19, 1904.

Annual rate of mortality for the week, 16 per 1,000. Estimated population, 45,500.

ECUADOR.

Reports from Guayaquil—Inspections of vessels—Improvement in quarantine regulations.

Acting Assistant Surgeon Gruver reports November 4 and 10 as follows:

Week ended November 2, 1904: Present officially estimated population, 60,000. Mortality from all causes 31, as follows: Tuberculosis, 5; pernicious fever, 4; fevers (without classification), 2; from all other causes 20. No case of yellow fever has been reported either in the city or surrounding territory for the past ten days.

During the month ended October 31, 1904, there was a total mortality of 194, of which 25 deaths were from tuberculosis and 2 from yellow fever. For the same period last year the total mortality was 184, of which 27 deaths were from tuberculosis and none from yellow fever.

During the week 3 vessels were fumigated, 35 passengers and 77 pieces of baggage examined, 3 immune certificates and 4 bills of health issued, as follows: October 30, steamship *Saxonia*, from Hamburg via Chilean and Peruvian ports, cleared for San Francisco. She took no passengers from here. October 31, steamship *Colombia*, from Chilean and Peruvian ports, cleared for Ancon, canal zone, with 8 cabin and 27 steerage passengers. November 1, steamship *Menes*, from Hamburg via Chilean and Peruvian ports, cleared for San Francisco. No passengers. These three vessels were fumigated by sulphur. On November 2, steamship *Ecuador*, a coasting steamer, was cleared for Panama via way ports. Crew 55, cabin passengers 12, steerage passengers 11; all told, 78. Vessel not fumigated and passengers not examined.

By an act of the recent Congress a serious defect in the quarantine regulations was remedied by authorizing the superior board of health to impose and collect fines ranging from 5 to 1,000 sucres for violations of sanitary and quarantine laws.

Week ended November 9, 1904. Present officially estimated population, 60,000. Mortality from all causes, 38, as follows: Pernicious fever, 1; fever (without classification), 5; tuberculosis, 7; grippe, 2; enteric diseases, 5; from all other causes, 18.

During the week no vessel cleared for any American or Panaman port. I translate the following from this morning's issue of *El Grito del Pueblo*:

"Several cases of smallpox, which constitutes a serious menace to children, have appeared in this city. The superior board of health should, as they have done on other occasions, place two or more physicians in charge of vaccinations."

Careful inquiry at the office of the board of health and at the hospitals fail to verify this report, and at the present time I can not obtain any more authentic information than that embodied in the above report. Should smallpox occur here, however, there is not much danger of an epidemic, as the population is thoroughly vaccinated, and only a very few young children and foreigners remain unprotected.

GERMANY.

Report from Berlin—Death rate of Berlin and other large cities.

Consul-General Mason reports as follows:

The death rate of Berlin for the week ended October 29 was lower than it had been in the three preceding weeks, amounting, calculated on the year, to 13.2 per thousand of the population, thus being also lower than the rate for the corresponding week of last year, in which it amounted to 14.8 per thousand. Almost two-thirds of the large German towns and cities showed less favorable health conditions than Berlin, the death rate in the following places being considerably higher than that of Berlin, viz, Dresden, Leipsic, Bremen, Cologne, Aix la Chapelle, Munich, Nuremberg, Dortmund, Halle, Magdeburg, Breslau, Königsberg, as well as London, Paris, and Vienna. On the

other hand, the following cities had lower rate of mortality than Berlin, namely, Hamburg, Frankfurt-on-Main, Stuttgart, Karlsruhe, Brunswick, Hanover, Schöneberg (with 10.9 each), and Charlottenburg (with 10 per thousand).

There was a slight increase in the number of deaths among children in the first year of life, so that the decreased mortality was exclusively among the higher age classes. The infant death rate amounted to 3.6 per years and thousand, thus being lower than the Munich and Leipsic figure, but somewhat higher than the Hamburg rate. Acute diseases of the respiratory organs again showed an increase, causing 56 deaths (including 4 from influenza). Acute intestinal diseases showed no change, claiming 51 victims. Six infants succumbed to cholera. Furthermore, there were registered 77 deaths from phthisis pulmonalis, 34 deaths from cancer, 7 deaths from scarlet fever, 6 deaths from diphtheria, 3 deaths from measles, 1 death from enteric fever. Finally, 13 persons died by violence.

Plague and cholera in various countries.

Plague.

Egypt.—During the week from the 22d to the 28th of October, one case of plague was registered in Alexandria and 1 death.

British India.—During the week ended the 15th of October there were registered in the Bombay Presidency 12,714 fresh cases of plague, with 9,879 deaths; of which 75 cases (67 deaths) occurred in the city of Bombay; 9 cases (11 deaths) in Karachi; 218 cases (218 deaths) in Surat; 25 cases (23 deaths) in the ports of Jodia and Porbandar.

British South Africa.—In Durban a fresh case of plague occurred during the week ended the 1st of October.

Cholera.

Russia.—In the Trans-Caspian territory there were registered between the 17th and 24th of October 3 fresh cases of cholera, 1 in Merv, 1 at the station Kisil-Arwat, and 1 in Serachs. In Baku during the week ended the 25th of October there were registered 26 cases of cholera, as compared with 60 in the preceding week, with 19 deaths, as compared with 24 in the foregoing week. In Astrakhan during the period from the 18th to the 26th of October there were registered 15 cases of cholera (with 6 deaths).

In Baku, according to later reports, there have been registered during the period from the 28th of August to the 11th of October a total number of 269 cases of cholera (with 161 deaths), and from the 12th to the 23d of October there occurred 76 cases of cholera (with 37 deaths).

HAWAIIAN ISLANDS.

Report of quarantine transactions in the Hawaiian Islands for the month of October, 1904.

Infectious diseases in Italy.

For the week ended November 3, 1904, the following is the status of infectious diseases in Italy:

Smallpox.—The disease is still widely spread in the province of Lecce. Cases are reported from 13 communes, but there are special foci of infection at S. Vito, S. Pancrazio, Ceglie, and Novoli. A few cases are reported in the provinces of Rome, Treviso, Genoa, Arezzo, Pesaro, Palermo, and Potenza.

Measles.—There has been an epidemic at Verbicaro (Cosenza), but very few cases are now reported.

Enteric fever.—The disease is no longer as widely spread in Italy as in the previous weeks. Cases are still reported in the provinces of Rome, Milan, Arezzo, and Novara.

Diphtheria.—There are a few cases in Spezia, Milan, Arezzo, and in the provinces in which these cities are situated.

Anthrax.—Two cases were reported in Artana (Rome).

ITALY.

Quarantine regulations.—An order dated October 25, 1904, repeals the ordinance No. 19, dated September 16, 1903, by which arrivals

from Brisbane and Townsville (Queensland) were subjected to quarantine regulations against plague.

TURKEY.

Cholera.—In Mesopotamia for the week ended October 1, 1904, there were reported 233 cases of Asiatic cholera with 160 deaths, of which 33 cases and 39 deaths were in Bagdad, 36 cases and 11 deaths in Amara, 34 cases and 14 deaths in Mendeli, 39 cases and 30 deaths in Deiz-Zor, 7 cases and 7 deaths in Kiazmieh, and 6 deaths in Mosul. Comparing the present figures with the previous bulletins, it appears that the epidemic is gradually diminishing.

GERMANY.

Anchylostomiasis and trachoma.—In the Arnsberg district, during the week ended October 19, 1904, there were reported 46 cases of anchylostomiasis and 13 of trachoma. The trachoma cases were of an acute nature and formed part of an epidemic of ophthalmia previously reported.

MORTALITY IN EUROPEAN CITIES.

Berne.—Month of July, 1904: Estimated population, 68,958. Total number of deaths, 98; including measles, 1; whooping cough, 3; enteric fever, 19; and pulmonary tuberculosis, 17. Annual death rate, 16.8 per mille.

Geneva.—Month of July, 1904: Estimated population, 110,954. Total number of deaths, 121; including diphtheria, 1; whooping cough, 2; and pulmonary tuberculosis, 30. Annual rate, 12.9 per mille.

RUSSIA.

Cholera.—The following is translated from the original French text of a report made October 11, 1904, to the Belgian Government from the Belgian legation at St. Petersburg:

The city of Saratow is contaminated by cholera, and it is expected that an epidemic will appear at Kharbynsk. There is an entire absence of medical men in the district of Kharbynsk, all the doctors of the district having been sent to the extreme East. The Kharabynsk delegation has just made application to the provincial delegation with a view to obtaining disinfectants and medical men. A pupil in a parochial school for boys at Saratow having fallen ill of cholera, the school was at once closed. The district of Balachow, province of Saratow, is also without physicians, because they have all left for the war. The delegation of the district is making great efforts to obtain medical men. At Moscow there is an active surveillance of travelers and of the baggage of travelers arriving from places infected with cholera. The physicians of the different arrondissements are required to make daily visits to the persons in question for a period of five to ten days.

SIAM.

Quarantine proclamation.—The following royal decree on quarantine has been promulgated by the Siamese Government to repeal the royal decree of May 20, 1904:

Whereas bubonic plague has now ceased to be epidemic in Hongkong and elsewhere, but whereas the disease is now endemic in Hongkong and several ports in China, it is expedient to repeal the royal decree of May 20, 1904, and substitute another decree: Therefore it is hereby decreed:

1. For the purposes of this decree the inspection station shall be in the river Menam Chow Phya, opposite the custom-house at Paknam.

2. Any vessel which, having cleared from Hongkong or any port in China, arrives in Siamese waters on or after the date of the present decree shall drop anchor at the said inspection station and shall stay there until such a time as the medical officer shall have boarded her and have given pratique.

3. No person other than the health officer or one of his assistants shall communicate from any ship coming from Hongkong or from any port in China with the land or from the land with such ship or from such ship with other ships or from other ships with such ship before she has received pratique.

4. The master or other person having the control of any vessel in quarantine shall give the health officer such information about the vessel and the voyage and the health of the crew and passengers and otherwise as the health officer may require, and shall answer fully and truly questions put to him by the health officer, and shall, if required by the health officer, furnish the necessary boats and appliances for the landing of the passengers or crew at the quarantine station, and shall, in a general way, give the health officer all necessary assistance to enable him to grant pratique to the vessel.

5. The health officer may board any vessel arriving in Siamese waters and inspect every person in the vessel. He may, if he thinks necessary, call for inspection of the ship's bills of health, emigration papers, or other documents which he may require to enable him to grant pratique, and he shall use every lawful means which to him may seem expedient for ascertaining the sanitary condition of the vessel and persons therein.

6. Any vessel which shall be so loaded as to be unable to pass over the bar at the entrance of the river Menam Chow Phya shall, in order to obtain permission to lighten or load at the outside anchorage of Koh-se-chang or of Anghin, give through the ship's agent in Bangkok to the health officer of the local government board previous written notice of the ship's expected arrival at such outside anchorage, and deliver to the customs officer stationed at outside anchorage a written declaration stating that no death from or case of bubonic plague has occurred on board from port of departure.

7. The health officer shall be, and is hereby, empowered to deal with all infected vessels and persons as he may think proper to prevent the spreading of the disease.

8. Any and all persons committing a breach of the present decree or assisting in any way in the commission of such breach, and the master, captain, or other person having the control of any vessel or boat on board of which such breach has been committed, or which has been in any way engaged in the commission of such breach, shall be severally liable to a fine not exceeding 2,000 ticals or to imprisonment not exceeding six months, or to both such punishments.

9. Any cost incurred by the Government in the maintenance of any person removed to the quarantine station shall be repaid by the agents of the vessel.

10. The execution of the present decree shall be and is hereby intrusted to the minister of the local government, with the full assistance of the naval department.

Done at Bangkok, September, 1904.

PANAMA.

Report from Colon—Vessels cleared for United States.

Acting Assistant Surgeon Mohr reports November 14, as follows:

During the week ended November 12, 1904, the following vessels cleared for ports in the United States and have been granted bills of health:

British steamship *Senator* for New Orleans, via Mexican ports, November 9, with 40 crew and 2 passengers.

American steamship *Advance* for New York, November 9, with 64 crew and 58 passengers.

Panaman schooner *Republic de Panama* for Mobile, November 12, with 9 crew and no passengers.

American steamship *City of Washington* for New York, November 10, with 64 crew and 2 passengers.

British steamship *Craigneuk* for Philadelphia, via Santiago, Cuba, November 11, with 23 crew and no passengers.

Spanish steamship *Manuel Calvo* for Ponce, P. R., via South American ports, November 12, with 121 crew and 116 passengers.

Norwegian steamship *Preston* for New Orleans, via Limon, C. R., November 12, with 29 crew and 14 passengers.

PORTO RICO.

Reports for October from San Juan and subports—Vital statistics.

Chief Quarantine Officer King reports, November 14, as follows:

Transactions at San Juan and the six subports of the island of Porto Rico for the month of October, 1904:

San Juan.

Number of vessels inspected.....	16
Number of bills of health issued.....	27
Number of vessels held in quarantine.....	3
Number of persons detained in quarantine.....	5

Vessels held in quarantine were the Red "D" Line steamers *Carcacas* and *Philadelphia*, which arrived at this port from ports of Venezuela and Curaçao on October 5 and 19, respectively, and the Spanish steamer *Cataluna*, from Central and South American ports on October 21. These vessels were permitted to transact business under guard.

The general sanitary condition of this port and the surrounding country is good, and there are no quarantinable diseases. The usual monthly report of vital statistics is herewith inclosed.

The following is a summary of the transactions at the six subports:

Number of vessels inspected at Mayaguez, 7 (1 of which was held in quarantine); at Arecibo, 2; at Humacao, 1; at Fajardo, 7; at Aguadilla, 2, and at Arroyo, 0.

The number of bills of health issued at the subports were as follows: Mayaguez, 14; Humacao, 0; Arroyo, 0; Arecibo, 3; Aguadilla, 6, and Fajardo, 9.

The report of vital statistics for October, 1904, shows 89 births and 95 deaths, 11 of which were from uncinariasis, 11 from anemia, 2 from cerebro-spinal meningitis, 2 from diphtheria, 1 from typhoid fever, 1 from pernicious malarial fever, and 8 from tuberculosis, at Mayaguez; 102 births and 102 deaths, 3 of which were from uncinariasis, 5 from pernicious anemia, 10 from anemia, malnutrition, 11 from bronchitis, 6 from tuberculosis, 1 from typhoid fever, and 2 from pneumonia, at Arecibo; 48 births and 42 deaths, 12 from anemia and 1 from tuberculosis, at Humacao; 53 births and 38 deaths, 4 from uncinariasis and 5 from tuberculosis, at Aguadilla; 49 births and 35 deaths, 3 from anemia, at Fajardo; and 25 births and 10 deaths, 3 from paludismo, and 1 from tuberculosis, at Arroyo.

Vital statistics of San Juan, Porto Rico, for the month of October, 1904.

VENEZUELA.

Yellow fever continues in La Guaira.

Passed Assistant Surgeon Frick reports, November 12, 1904, that yellow fever is still present in La Guaira.

WEST INDIES.

Report from Barbados—Vessels inspected.

Assistant Surgeon Ward reports, November 15, as follows:

I have the honor to report that during the week ended November 12, 1904, bills of health were issued to 3 steamships and 5 sailing vessels with 181 crew, 33 steerage, and 26 cabin passengers. Of this number I inspected 2 steamships, 3 sailing vessels, 132 crew, 33 steerage, and 19 cabin passengers, of whom 3 crew, 6 steerage, and 5 cabin passengers were taken on at this port. There were 2 steerage in transit for Grenada, West Indies.

On November 7 I viséed the bill of health of the *Republic of Panama*, issued on that date, to the Royal Mail steamship *La Plata*, from Southampton, bound to Colon via other ports in the Caribbean Sea, with 171 crew, including 24 laborers taken on at this port, and 189 passengers. A certificate of vaccination was issued to a deck passenger for Colon. There were two cases of tuberculosis of the lungs aboard the steamship *La Plata* on her voyage from England to Barbados.

The health of the island is good; no quarantinable diseases have been reported.

Foreign and insular statistical reports of countries and cities—Yearly and monthly.

AFRICA—*Sierra Leone*.—Two weeks ended October 21, 1904. Estimated population, 40,000. Total number of deaths, 33. No deaths from contagious diseases reported. Malarial fever prevalent.

AUSTRALIA—*New South Wales—Newcastle—Month of September, 1904*.—Estimated population, 50,100. Total number of deaths, 50; including diphtheria 1, whooping cough 1, and 5 from tuberculosis.

New South Wales.—Sydney, month of September, 1904. Estimated population, 511,030. Total number of deaths, 409; including diphtheria 3, measles 1, plague 1, scarlet fever 1, and 42 from phthisis pulmonalis. Three months ended September 30, 1904. Total number of deaths 1,373; including 83 from contagious diseases.

BAHAMAS—*Dunmore Town*.—Two weeks ended November 11, 1904. Population, 1,232. No deaths reported.

Green Turtle Cay Abaco.—Two weeks ended November 1, 1904. Population, 3,314. No deaths reported.

Nassau.—Two weeks ended November 12, 1904. Population, 12,650. No deaths reported.

BRAZIL—*Pernambuco*.—Two weeks ended October 15, 1904. Estimated population, 200,000. Total number of deaths, 302, including enteric fever 3, smallpox 45, and 36 from tuberculosis.

CANADA—*British Columbia—Victoria*.—Month of October, 1904. Estimated population, 21,000. Total number of deaths, 26, including diphtheria 1, and 4 from tuberculosis.

FRANCE—*Marseille*.—Month of October, 1904. Estimated population, 491,161. Total number of deaths, 810, including diphtheria 5, enteric fever 33, scarlet fever 1, and 101 from tuberculosis.

GERMANY—*Alsace—Strassburg*.—Month of September, 1904. Estimated population, 162,101. Total number of deaths, 241, including diphtheria 2, measles 4, scarlet fever 2, typhus fever 1, whooping cough 2, and 34 from tuberculosis.

Weimar.—Month of October, 1904. Estimated population, 30,606. Total number of deaths, 38. No deaths from contagious diseases reported.

GIBRALTAR.—Two weeks ended November 6, 1904. Estimated population, 27,460. Total number of deaths, 15. No deaths from contagious diseases reported.

GREAT BRITAIN—*England and Wales.*—The deaths registered in 76 great towns in England and Wales during the week ended November 5, 1904, correspond to an annual rate of 14.9 per 1,000 of the aggregate population, which is estimated at 15,271,287.

Bradford.—Two weeks ended November 5, 1904. Estimated population, 285,089. Total number of deaths 157, including diphtheria 13, enteric fever 2, whooping cough 1, and 14 from phthisis pulmonalis.

London.—One thousand three hundred and thirty deaths were registered during the week, including measles 14, scarlet fever 13, diphtheria 15, whooping cough 4, enteric fever 6, and 22 from diarrhea. The deaths from all causes correspond to an annual rate of 14.9 per 1,000. In Greater London 1,817 deaths were registered. In the "outer ring" the deaths included 2 from diphtheria, 9 from measles, and 3 from scarlet fever.

Ireland.—The average annual death rate represented by the deaths registered during the week ended November 5, 1904, in the 21 principal town districts of Ireland was 19 per 1,000 of the population, which is estimated at 1,093,289. The lowest rate was recorded in Portadown, viz, 5.2, and the highest in Clonmel, viz, 46.2 per 1,000. In Dublin and suburbs 162 deaths were registered, including diphtheria 1, measles 6, whooping cough 1, and 32 from tuberculosis.

Scotland.—The deaths registered in 8 principal towns during the week ended November 5, 1904, correspond to an annual rate of 17.8 per 1,000 of the population, which is estimated at 1,726,236. The lowest rate of mortality was recorded in Leith, viz, 13.6, and the highest in Greenock, viz, 21.7 per 1,000. The aggregate number of deaths registered from all causes was 588, including diphtheria 8, measles 9, scarlet fever 1, and 17 from whooping cough.

Three months ended September 30, 1904. Estimated population, 4,627,656; total number of deaths, 16,882. The combined deaths from the principal epidemic diseases in 8 of the principal towns, in which 36 per cent of the population live, numbered 492. The death rate for the quarter in Glasgow was 16.6; in Edinburgh, 14.6; in Dundee, 16.9; in Aberdeen, 14.4; in Paisley, 15.5; in Leith, 12.4; in Greenock, 16.1, and in Perth, 15.5.

HAWAII—*Honolulu.*—Month of October, 1904. Estimated population, 39,306. Total number of deaths, 80, including enteric fever 7, and 15 from tuberculosis.

ITALY—*Milan.*—Month of September, 1904. Estimated population, 522,030. Total number of deaths, 748, including diphtheria 8, enteric fever 33, and 93 from tuberculosis.

JAVA—*Batavia.*—Two weeks ended October 8, 1904. Estimated

population, 160,000. Number of deaths not reported. No deaths from contagious diseases reported.

MALTA.—Three weeks ended October 29, 1904. Estimated population, 197,070. Total number of deaths, 292, including diphtheria 5, and 3 from enteric fever.

SPAIN—Barcelona.—Ten days ended October 31, 1904. Estimated population, 600,000. Total number of deaths, 381, including diphtheria 3, enteric fever 12, smallpox 15, whooping cough 4, and 45 from tuberculosis.

Cadiz.—Month of October, 1904. Estimated population, 69,382. Total number of deaths, 176, including diphtheria 1, enteric fever 4, and 31 from tuberculosis.

Seville.—Month of October, 1904. Estimated population, 148,315. Total number of deaths, 379, including diphtheria 1, enteric fever 1, measles 1, whooping cough 1, and 69 from tuberculosis.

SWITZERLAND.—Reports for the two weeks ended October 22, 1904, from 18 cities and towns having an aggregate population of 808,000, show a total of 475 deaths, including diphtheria 8, enteric fever 5, erysipelas 1, measles 3, scarlet fever 1, whooping cough 7, and 58 from phthisis pulmonalis.

Cholera, yellow fever, plague, and smallpox, June 25 to December 2, 1904.

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from United States consuls through the Department of State and from other sources.]

[For reports received from December 26, 1903, to June 24, 1904, see PUBLIC HEALTH REPORTS for June 24, 1904.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]
