

PUBLIC HEALTH REPORTS.

UNITED STATES.

[Reports to the Surgeon-General, Public Health and Marine-Hospital Service.]

Inspection at Barbados, West Indies, of laborers for work on the Isthmian canal—Officer of the Public Health and Marine-Hospital Service requested by Canal Commission to examine and certify laborers.

The following is received from Assistant Surgeon Ward, under date of January 2 and 18:

Mr. W. J. Karner, assistant engineer to the chief engineer of the Isthmian Canal Commission, arrived at Barbados on Saturday from Colon by the Royal Mail.

He called at the consulate soon after his arrival and brought letters of introduction from Mr. John P. Wallace, the chief engineer, to the consul and to the vice and deputy consul at this port.

It is the intention of this gentleman to remain a fortnight or more in Barbados to look over the territory and to negotiate for the deportation of laborers from Barbados to the Canal Zone, subject to the approval of his department.

There are several emigration agents at this port licensed for that purpose by the Barbadian government. One of these agents has written several letters to General Davis relative to the deportation of laborers, but it is still a mooted question whether the necessary labor will come through their hands or those of a special agent appointed by the Canal Commission. Such an appointment, I presume, could be made without the slightest objection from the government of Barbados.

In any event, if laborers are shipped from this port for the Canal Zone I believe that a thorough physical examination should be made and that a certificate should be issued by the medical officer of the Service at this port to each person before he is permitted to leave Barbados as a contract laborer.

In accordance with the Bureau circular letter, November 5, 1904, all will have to have certificates of vaccination from the service medical officer at this port, and I believe that those specially deported for labor should have certificates of good physical condition, to prevent the introduction into the Canal Zone of cases of leprosy, dysentery, ankylostomiasis, and filariasis, which would, sooner or

later, render a man unfit for work, not to speak of the undesirability of such individuals from a sanitary standpoint.

If some such examination is not made by physicians who have no personal interest in the emigrants, and who are looking out only for the public health of the United States and its dependencies, the importation of large bodies of men into the Canal Zone will be positively dangerous, notwithstanding the fact that the quarantinable diseases will be stopped at quarantine. This work unquestionably could best be done by the medical officers of the Public Health and Marine-Hospital Service stationed at ports whence such contract labor is deported.

JANUARY 18, 1905.

On the 13th instant, W. J. Karner, representing the Isthmian Canal Commission of the United States, made a request to me, by letter (copy inclosed), that I make a physical examination of all men recruited as laborers here for work on the Panama Canal, and that I certify to the same.

In reply (copy also inclosed) I informed him that while awaiting your approval I would be pleased to comply with his request, and suggested a form of certificate of physical health and identification that might be issued by me to each laborer. This certificate (one inclosed) was accepted by Mr. Karner (letter of acceptance inclosed), and Mr. Brewster, the emigration agent employed to recruit these laborers, was directed to have 1,000 printed.

Hereafter each applicant will be required to undergo a physical examination by me before he is permitted to sign the "service contract," and the certificate issued will be attached to each original contract after execution.

Since beginning this work I have examined 60 men and rejected 18.

[Inclosure.]

BARBADOS, WEST INDIES, *January 13, 1905.*

Asst. Surg. WILLIAM K. WARD,

*Public Health and Marine-Hospital Service,
Barbados, West Indies.*

SIR: Representing the Isthmian Canal Commission of the United States, I have arranged with the government of Barbados to recruit laborers here for work on the Panama Canal.

I understand it is necessary for these laborers to have a certificate of successful vaccination from you to permit them to land at Colon, and as their acceptance for employment by me is based largely on their physical condition, I respectfully request that you include in your examination of these men the physical examination required by the Canal Commission to insure their acceptance as canal employees, and that you certify to the same.

I have the honor to be, yours, with great respect,

W. J. KARNER,

*Representing the Isthmian Canal Commission
of the United States.*

INSPECTION SERVICE, MEXICAN BORDER.

Inspection at Eagle Pass, Tex.

Acting Assistant Surgeon Hume reports as follows:

	Week ended Mar. 4, 1905.
Persons inspected on trains	206
Persons held	0
Pullman cars fumigated	7

Bags of Pullman linen disinfected, 40; persons inspected on footbridge, 3,359.

Inspection at El Paso, Tex.

Acting Assistant Surgeon Alexander reports as follows:

Week ended March 4, 1905: Inspection Mexican Central passengers, 258; inspection Mexican Central immigrants, 76; inspection 2 Pullman special excursionists, 34; disinfection of soiled linen imported for laundry work, 412 pieces.

Inspection at Laredo, Tex.

Acting Assistant Surgeon Hamilton reports, through Acting Assistant Surgeon Frick, as follows:

Week ended March 4, 1905: Number of passenger trains from Mexico inspected, 16; persons on passenger trains from Mexico inspected, 1,085; immigrants on passenger trains from Mexico inspected, 36; immigrants and others vaccinated, 32; Pullman coaches from Mexico disinfected upon entry, 14.

Inspection at Nogales, Ariz.

Acting Assistant Surgeon Gustetter reports as follows:

Week ended March 4, 1905. Passengers inspected, 214; immigrants inspected, 54; immigrants deported, medical reason, 1; nonmedical reasons, 4.

STATISTICAL REPORTS OF STATES AND CITIES OF THE UNITED STATES,
YEARLY AND MONTHLY.

CALIFORNIA—*Stockton*.—Month of February, 1905. Estimated population, 20,000. Total number of deaths, 26, including 4 from tuberculosis.

GEORGIA—*Macon*.—Month of February, 1905. Estimated population, 35,000; white, 19,000, colored, 16,000. Total number of deaths, 69; white, 22, colored, 47, including 2 from phthisis pulmonalis.

LOUISIANA—*Baton Rouge*.—Month of February, 1905. Estimated population, 19,500. Total number of deaths, 30, including 1 from tuberculosis.

MASSACHUSETTS—*Newton*.—Month of February, 1905. Estimated population, 39,310. Total number of deaths, 29, including whooping cough 1 and 4 from tuberculosis.

Worcester.—Month of January, 1905. Estimated population, 128,286. Total number of deaths, 186, including diphtheria 2, enteric fever 1, whooping cough 1, and 17 from tuberculosis.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended February 25, 1905, from 68 observers, indicate that smallpox was more than usually prevalent, and pneumonia, scarlet fever, erysipelas, intermittent fever, measles, enteric fever, cholera morbus, diphtheria, inflammation of bowels, remittent fever, puerperal fever, meningitis, whooping cough, inflammation of brain, and dysentery were less than usually prevalent.

Meningitis was reported present at 4, whooping cough at 6, diphtheria at 26, measles at 35, scarlet fever at 48, enteric fever at 51, smallpox at 68, pneumonia at 80, and phthisis pulmonalis at 187 places.

MINNESOTA—*Winona*.—Month of February, 1905. Estimated population, 23,000. Total number of deaths, 27, including diphtheria 1, and 1 from whooping cough.

MISSOURI—*St. Louis*.—Month of January, 1905. Estimated population, 685,000; white, 643,000; colored, 42,000. Total number of deaths, 1,003; white, 905, colored, 99, including diphtheria 8, enteric fever 6, measles 4, scarlet fever 1, whooping cough 4, smallpox 7, and 155 from tuberculosis.

MONTANA—*Helena*.—Month of February, 1905. Estimated population, 13,000. Total number of deaths not reported. No deaths from contagious diseases.

NEW HAMPSHIRE—*Concord*.—Month of February, 1905. Estimated population, 20,000. Total number of deaths, 46, including enteric fever 1, and 5 from tuberculosis.

Franklin.—Month of February, 1905. Estimated population, 6,000. Total number of deaths, 8. No deaths from contagious diseases.

NEW YORK.—Reports to the State board of health, Albany, for the month of January, 1905, from 156 cities, towns, and villages, having an aggregate population of 7,918,000, show a total of 11,896 deaths, including diphtheria 260, enteric fever 104, measles 59, scarlet fever 103, whooping cough 45, and 1,169 from tuberculosis.

The Monthly Bulletin for January says:

The total number of deaths reported to the department of health during January is 11,875, corresponding to a death rate of 18.5. Of these 2,200 were reported for the rural towns not separately specified in the Bulletin, which is a decrease of 200 from that of last January, but is the same as that of December last. Of these there is a decrease in diphtheria, an increase in whooping cough, and a material increase in consumption and pneumonia. The five large cities show an increase over the December mortality about the same relatively as in the rural towns, and for the State there are 400 more deaths than in December, and there is the same increase above the average mortality of the month. Of important causes of death, pneumonia caused 1,800 deaths, which is more than occurred in January last; consumption 1,166, or about the same as in the two months under comparison; Bright's disease 780, likewise almost identical. Of the epidemic diseases, cerebro-spinal meningitis caused 150

deaths, which is larger mortality than it has been since June, when its epidemic, prevailing in New York City, was still in progress, most of the current mortality being in that city. Typhoid fever caused about 100 deaths, which is less than for years in January, the average being 150 for the month. Measles and scarlet fever have a moderate mortality and are neither of them prevalent to any material extent in this State. Whooping cough is more generally prevalent, and the 45 deaths from it are distributed extensively. Diphtheria caused 260 deaths, which is a material decrease from the average and less than occurred in December or in January last. There were about 175 deaths reported from grippe outside of New York City and Buffalo, and this is considerably more than were reported in December. It is reported from all of the districts, and more, relatively, in the rural than the urban municipalities. Without doubt these reports but partially represent the full effect of the annually recurring prevalence of this disease at this season of the year. There has been no mortality for smallpox in this State since last October.

Saratoga.—Month of February, 1905. Estimated population, 12,119. Total number of deaths, 24, including 2 from tuberculosis.

PENNSYLVANIA—*Altoona*.—Month of February, 1905. Census population, 38,973. Total number of deaths, 72, including diphtheria 1, enteric fever 1, and 4 from tuberculosis.

Dunmore.—Month of February, 1905. Estimated population, 15,000. Total number of deaths, 13, including 1 from tuberculosis.

WISCONSIN—*Milwaukee*.—Month of January, 1905. Estimated population, 335,000. Total number of deaths, 392, including diphtheria 4, enteric fever 10, scarlet fever 5, whooping cough 2, and 43 from tuberculosis.

ARRIVALS OF IMMIGRANTS.

Reports from Cape Colony—Plague—Examination for plague-infected animals—Infectious diseases.

COLONIAL SECRETARY'S OFFICE,
Cape Town, Cape of Good Hope, January 23, 1905.

The following report by the medical officer of health for the Colony on the occurrence of bubonic plague in the Cape Colony for the week ended January 21, 1905, is published for general information.

NOEL JANISCH,
Under Colonial Secretary.

Port Elizabeth.—No case of plague was discovered during the week. At the plague hospital one case was discharged recovered. No cases remain under treatment. One hundred and forty-seven rats (7 found dead) and 152 mice (5 found dead) were bacteriologically examined during the week, of which 3 rats and 1 mouse proved to be plague infected.

East London.—No case of plague was discovered during the week. At the plague hospital no case was discharged or died. Three cases remain under treatment. One hundred and twenty rats (33 found dead), 59 mice (20 found dead), and 3 cats were bacteriologically examined during the week, of which 5 rats, 1 mouse, and 2 cats proved to be plague infected.

Other districts of the Colony.—No plague infection was discovered either in man or animals. Four hundred and twenty-three rodents were examined during the week from the Cape Town Harbor board area and the shipping in the harbor, and 579 were examined by the medical officer of health for the city from the Cape Town municipal area.

A. JOHN GREGORY,
Medical Officer of Health for the Colony.

COLONIAL SECRETARY'S OFFICE,
Cape Town, Cape of Good Hope, January 30, 1905.

The following report by the medical officer of health for the Colony on the occurrence of bubonic plague in the Cape Colony for the week ended January 28, 1905, is published for general information.

NOEL JANISCH,
Under Colonial Secretary.

Port Elizabeth.—One case of plague was discovered during the week, namely, a native female on the 25th instant. At the plague hospital 1 native female died. No cases remain under treatment. One hundred and forty-six rats (6 found dead) and 182 mice (7 found dead) were bacteriologically examined during the week, of which 1 rat and 4 mice proved to be plague infected.

East London.—No case of plague was discovered during the week. At the plague hospital 1 European female was discharged. Two cases remain under treatment. Sixty-eight rats (28 found dead), 57 mice (17 found dead), and 11 cats were bacteriologically examined during the week, of which 7 rats and 1 cat proved to be plague infected.

Other districts of the Colony.—No plague infection was discovered either in man or animals. Three hundred and twelve rodents were examined during the week from the Cape Town harbor Board area and the shipping in the harbor, and 457 were examined by the medical officer of health for the city from the Cape Town municipal area.

A. JOHN GREGORY,
Medical Officer of Health for the Colony.

Date of last infected rat, January 19, 1905. Date of previous infected rat, January 14, 1905.

B. BURNETT HAM,
Commissioner of Public Health.

Plague in New South Wales.

The government of New South Wales reports for the week ended the 28th ultimo that a second case of plague has occurred at Ulmarra in that State.

AUSTRIA-HUNGARY.

Report from Fiume—Inspection of emigrants.

Acting Consular Agent La Guardia reports, February 26, as follows: Steamship *Ulonia* sailed February 25 for New York; inspected and passed 1,551 steerage passengers, rejected 2; inspected and labeled 2,000 pieces small and 16 pieces large baggage; disinfected 21 pieces (used feathers).

BRAZIL.

Reports from Bahia—Mortuary statistics—Smallpox—Last case of plague discharged and plague hospital closed.

Consul Furniss reports, January 28 and February 4, 11, and 16, as follows:

During the week ended January 28, 1905, 56 bodies were interred in the Bahia cemeteries.

The causes given for interment were as follows: Aneurism, 1; arterio-sclerosis, 5; asphyxia, 1; beriberi, 3; bronchitis, 2; cerebral congestion, 2; death by violence, 2; diarrhea and dysentery, 6; intestinal parasites, 1; malarial fever, 5; meningitis, 2; organic diseases of heart, 2; pleurisy, 1; pulmonary tuberculosis, 11; senile debility, 1; stillborn, 4; tetanus neonatorum, 1; other causes, 6.

During the same period there were reported 8 cases of smallpox, with no deaths.

Week ended February 4, 1905, 80 bodies.

Causes: Arterio-sclerosis, 2; beriberi, 1; bronchitis, 1; cerebral congestion, 3; cancer, 1; diarrhea and dysentery, 10; gangrene, 1; hepatitis, 2; intestinal obstructions, 2; malarial fevers, 5; nephritis, 1; organic diseases of heart, 4; pneumonia, 2; pulmonary tuberculosis, 9; rheumatism, 2; senile debility, 1; septicæmia, 1; stillborn, 10; syphilis, 1; uremia, 1; other causes, 20.

During the same period there were reported 5 cases of smallpox, with no deaths.

Week ended February 11, 1905, 54 bodies.

Causes: Alcoholism, 1; arterio-sclerosis, 1; beriberi, 1; Bright's disease, 1; cerebral congestion, 2; cirrhosis of liver, 3; diarrhea and dysentery, 8; epilepsy, 1; intestinal parasites, 1; malarial fevers, 3; meningitis, 2; organic diseases of heart, 4; pulmonary tuberculosis, 11; rheumatism, 1; stillborn, 6; syncope, 1; enteric fever, 1; whooping cough, 1; other causes, 5.

During the same period there were reported 4 cases of smallpox, with no deaths.

Week ended February 16, 1905, 76 bodies.

Causes: Apoplexy, 1; arterio-sclerosis, 1; beriberi, 2; Bright's disease, 3; cerebral congestion, 3; cancer, 1; cirrhosis of liver, 2; diarrhea and dysentery, 7; erysipelas, 1; malarial fevers, 4; meningitis, 1; nephritis, 1; organic diseases of heart, 1; pulmonary tuberculosis, 19;

senile debility, 2; smallpox, 2; stillborn, 7; syphilis, 2; tetanus, 2; tetanus neonatorum, 3; other causes, 11.

On the 16th instant the last case of plague under treatment in hospital was discharged as cured and the hospital closed.

During the week there were reported 10 cases of smallpox, with 2 deaths.

Report from Rio de Janeiro—Sanitary information from the Argentine Republic—Mortuary statistics—Plague, smallpox, and yellow fever.

Acting Assistant Surgeon Stewart reports, February 8, as follows:

During the week ended the 5th instant no vessel left this port for either United States, Cuban, or Canal Zone ports.

The commerce of the port as regards the shipments of coffee to the United States at this time of the year is usually dull, and this year is no exception to the general rule.

Sanitary information from the Argentine Republic.

A dispatch of date of the 31st ultimo states that bacteriological examination is being made of the sputa of all persons incarcerated in the public prisons of the city who have been attacked with the disease now prevalent in these places. It is reported that the examination shows the disease to be influenza; but notwithstanding this, many physicians contend that the disease in question is true bubonic plague. In this same laboratory will shortly be undertaken not only the examination of the sputa from such cases, but also the examination of blood taken from the more severe cases. This report is from Buenos Ayres.

There have been no further reports upon this subject since the one above quoted, except that on the following day 1 of the cases above reported proved fatal, and was affirmed by the authorities to be a case of influenza.

A report of date of the 2d instant states that there was in Bahia Blanca 1 severe case of variola. Reports from Buenos Ayres show that the heat there last week was intense. On the 2d there were 9 cases of heat stroke and also other cases on the 1st and 4th instant.

During the month of January, 1905, there were in Buenos Ayres 1,246 deaths.

Variola epidemic in Montevideo, Uruguay.

A dispatch of date of the 7th instant states that there has been an increase or recrudescence of the epidemic of variola in Montevideo. No figures are given either of cases or deaths.

Sanitary statistics of Petropolis during January, 1905.

During the month of January, 1905, there were in Petropolis 22 deaths, 11 minors and 11 adults.

Variola and bubonic plague in Para, Brazil.

A dispatch of date of the 7th instant states that variola and bubonic plague are both existent in the city of Para, or, as it is called in the

native tongue, Belem, the capital of the State of the same name. There are also many cases of beriberi in this city.

Mortuary statistics from State of Sao Paulo.

Sao Paulo (capital).—Week ended January 15, 1905. During the week there were in all 110 deaths. The deaths were caused as follows: Variola, 1; measles, 4; enteric fever, 1; dysentery, 2; erysipelas, 1; malarial fever, 2; tuberculosis, 6; septicæmia, 1; syphilis, 2; cancer, 1; diseases of the nervous system, 5; of the circulatory system, 7; of the respiratory system, 15; of the digestive system, 37; of the urinary system, 3; accidents during the puerperal state, 1; congenital debility, 4; violence, except suicide, 3; diseases ill defined, 14.

Natives, 89; foreigners, 21; up to 2 years of age, 66; 2 to 5 years, 9; 5 to 10 years, 2; 10 to 20 years, none; 20 to 50 years, 19; more than 50 years of age, 15.

Population, estimated, 286,000.

Santos.—Week ended January 15, 1905: Total deaths, 13; stillbirths, 1; causes of death: Variola, 2; malarial fevers, 2; tuberculosis, 1; anchylostomiasis, 1; disease of nervous system, 1; of the circulatory system, 2; of the digestive system, 2; violence, except suicide, 1; and disease ill defined, 1. Natives, 8; foreigners, 5.

Campinas.—Week ended January 15, 1905: Total deaths, 18; stillbirths, 3; causes of death: Tuberculosis, 1; cancer, 1; disease of nervous system, 1; of the respiratory system, 4; of the digestive system, 6; and diseases ill defined, 5. Natives, 15; foreigners, 5.

Sao Paulo (capital).—Week ended January 29, 1905: Total deaths, 112, as follows: Plague, bubonic, 1; measles, 3; enteric fever, 2; dysentery, 2; malarial fevers, 2; tuberculosis, 7; syphilis, 1; cancer, 1; diseases of nervous system, 9; of the circulatory system, 9; of the respiratory system, 9; of the digestive system, 30; of the urinary system, 4; accidents during puerperal state, 1; diseases of the skin, 1; congenital debility, 7; violence, except suicide, 2; stillbirths, 16; and diseases ill defined, 7. Natives, 94; foreigners, 19, and less than 2 years of age, 60.

Suspected bubonic plague at Bahia, Brazil.

A dispatch of date of the 6th instant states that 3 cases of sickness suspected of being bubonic plague were discovered on board of a vessel entering the port of Bahia on that date.

Sanitary statistics of Petropolis during 1904.

According to the registrations, there were in Petropolis during the year 1904, 478 deaths and 49 stillbirths. The estimated population is from 15,000 to 18,000 persons, although placed as high by some persons as 30,000. The death rate as calculated is given at 15.9 per 1,000 of the population, while the birth rate is 33.7—a very great difference. The deaths from tuberculosis were 10 per cent of the total number of deaths, while no other causes of deaths are given in the report at hand.

Mortuary report of Rio de Janeiro, week ended February 5, 1905.

During this week there were in all 246 deaths. Yellow fever caused 5 deaths, all among foreigners—i. e., other than Brazilians—with 8 new cases. Plague caused 3 deaths with 6 new cases, and variola caused 13 deaths with 28 new cases. At the close of the week there were 5 cases of yellow fever in the São Sebastião Hospital, 58 cases of variola there also, and 42 cases of bubonic plague in Paulo Candido Hospital. The deaths from yellow fever occurred as follows: 2 in the district of Santa Anna, 1 in the district of Santa Rita, and the other 2 in the Hospital São Sebastião. Two deaths from plague occurred in the city, the remainder in the hospital, while 5 of the variola deaths also occurred in the city limits—i. e., out of hospital.

The number of deaths from yellow fever exceeds the number for any week since that ended April 24, 1904, and was not exceeded in any week of last year.

Other causes of death were as follows: Measles, 3; whooping cough, 1; grippé, 7; enteric fever, 1; beriberi, 2; erysipelas, 1; malarial fevers, 4; tuberculosis, pulmonary, 51; other varieties of tuberculosis, 6; septicæmia, 2; syphilis, 4; cancer, 3; other general diseases, 4; diseases of the nervous system, 22; of the circulatory system, 33; of the respiratory system, 15; of the digestive system, 33; of the urinary system, 5; accidents during the puerperal state, 1; diseases of skin, 1; diseases of the organs of locomotion, 1; congenital debility, 9; senile debility, 5; violence, except suicide, 10; suicide, 1.

By ages: To 1 year, 54; 1 to 5 years, 22; 5 to 10, 3; 10 to 20, 11; 20 to 30, 40; 30 to 40, 41; 40 to 50, 31; 50 to 60, 19; more than 60 years of age, 24; age unknown, 1. Natives, 198; foreigners, 46; nationality unknown, 2.

By localities: In houses, domiciles, etc., 145; in civil hospitals, 30; in military hospitals, 8; in Santa Casa de Misericórdia, 52; in asylums, convents, etc., 5; in vessels in port, none; in places unknown, 6.

Daily average number of deaths 35.14, compared with 42.71 for the last week, and with 41.28 for the corresponding week of last year, giving a coefficient of 15.08 per each one thousand of the estimated population.

The highest range of the thermometer was 32.6° C. and the lowest was 20.7° C., with an average of 25.42° C. The total rainfall was 10.13 mm. Number of rats killed last week, 5,590; total number to date, 348,617.

CANADA.

Inspection of immigrants at Vancouver, British Columbia.

Acting Assistant Surgeon Riggs reports as follows: Month of February, 1905: Number of immigrants inspected, 90; number passed, 88; number certified for rejection, 2.

Inspection of immigrants at Victoria, British Columbia.

Assistant Surgeon Glover reports as follows: Month of February, 1905. Number of immigrants inspected, 78; number passed, 70; number certified for rejection, 8; certified on account of dangerous contagious or loathsome diseases, 2.

CHINA.

Report from Hongkong—Smallpox on U. S. army transport Seward.

Passed Assistant Surgeon White reports, February 8, as follows:

As we were going out to inspect the U. S. army transport *Seward*, clearing for Manila, January 26, 1905, the army assistant surgeon aboard reported that a Filipino seaman had that morning reported sick with fever and a skin eruption.

The local authorities were notified, and they quarantined the vessel on account of smallpox. The vessel was disinfected, contacts were vaccinated, and full pratique was given by local authorities.

The American bill of health was issued thereafter, the master being advised to call via Mariveles.

Reports from Shanghai—Inspection of vessels—Smallpox among natives and foreigners—Typhus fever reported at Hankow.

Acting Assistant Surgeon Ransom reports, February 1 and 8, as follows:

During the week ended January 29, 1905, 3 supplemental bills of health were issued, 3 vessels, 365 crew, 63 cabin and 64 steerage passengers were inspected, and manifests were viséed for 21,309 pieces of freight. One emigrant for San Francisco, per steamship *Siberia*, was examined and recommended for rejection.

There were reported to the municipal health officer during the week the following communicable diseases: Smallpox—6 new cases among the foreign population. Among the native population—smallpox, 23 deaths; diphtheria, 4 deaths, and tuberculosis, 27 deaths. The total deaths reported were 3 foreigners and 132 natives.

One case of typhus fever was reported at Hankow, the disease being imported, it is said, from Shanghai.

Improvement in smallpox situation—Cases of fever claimed to be bacteriologically verified as Malta fever.

During the week ended February 4, 1905, but one bill of health was issued, and 1 vessel, 118 crew, 37 cabin and 3 steerage passengers were inspected. Manifests were viséed for 41 pieces of freight.

During the week the following communicable diseases were reported in the foreign settlement: Among foreigners—smallpox, 9 new cases; diphtheria, 2 new cases. Among natives—smallpox, 12 deaths; diphtheria, 3 deaths; tuberculosis, 32 deaths. The total reported mortality was 4 foreigners and 126 natives.

Whether the apparent improvement in the smallpox situation is real, or whether it is due to other ports declaring Shanghai an infected port, thus causing a diminution in the number of cases reported, I am not prepared to say; but within the last month, and especially the last ten days, the weather has been severely cold and inclement, favoring concentration of individuals indoors and theoretically providing the best conditions for the spread of the disease.

It may be interesting to the Bureau to note that Doctor Bishop, surgeon of one of the English cruisers here, claims to have identified as Malta fever some of the febrile diseases prevailing here, and previ-

ously diagnosed as irregular types of enteric or malarial fever. It is stated that his claims have been verified by Professor Kitasato, of Tokyo.

No immigration examinations were made and no quarantinable diseases were reported from any outports during the period January 29 to February 4, 1905.

COSTA RICA.

Report from San Jose—Quarantine declared at Costa Rican ports against Colon, Panama, and Bocas del Toro, on account of prevalence of yellow fever on the Isthmus.

Consul Caldwell reports, February 14, as follows:

Owing to the prevalence of yellow fever on the Isthmus the Government of Costa Rica, by a decree of February 10, has declared a quarantine at the ports of the Republic against the ports of Colon, Panama, and Bocas del Toro, and ships arriving from those ports will be subject to such restrictions as the authorities may prescribe.

The ports of Costa Rica have been free from yellow fever for a long time, and the Government is determined to take all precautions and employ all means within its power to prevent the introduction of the disease.

CUBA.

Report from Habana—Inspection of vessels—Cases of sickness on vessels—Vessels from which passengers were landed at Tricornia quarantine station and sent to hospital—No quarantinable diseases.

Surgeon Wertebaker reports, March 9, as follows:

Week ended March 4, 1905.

Vessels inspected and bills of health issued	31
Crew of outgoing vessels inspected	1, 216
Passengers of outgoing vessels inspected	1, 284
Pieces of freight passed (salted hides)	886

The American steamship *Esperanza*, which left this port on February 28, had 1 sailor with tonsillitis.

The Spanish steamship *Montevideo*, which left this port February 28, had 1 steerage passenger in transit for Spain, suffering from chronic nephritis.

The following vessels landed sick passengers at the quarantine station of Tricornia, who were sent to hospital for treatment.

February 6, steamship *Sardinia*, 1 passenger with grippe.

February 13, steamship *Habana*, 3 passengers with febricula.

February 13, steamship *Miguel Gallart*, 4 passengers with measles, 1 passenger with varicella.

February 14, steamship *Habana*, 1 passenger with grippe.

There are no quarantinable diseases at this port.

Reports from Matanzas—Inspection of vessels—Precautionary detention of steamship Hermod from Tampico—Diphtheria, enteric fever, measles, and scarlet fever—Mortuary statistics.

Acting Assistant Surgeon Nuñez reports, March 6 and 7, as follows: During the week ended March 4, 1905, bills of health were granted

to 9 vessels leaving this port for the United States in good sanitary condition. Precautionary detention in quarantine while in port was observed against the Norwegian steamship *Hermod*, which arrived here from Tampico via Cardenas and Caibarien February 27. She cleared for New York direct February 28 without there having occurred any sickness on board from the time of her departure from the port of origin.

The official reports of contagious diseases received during the week show that the epidemic of measles in the city is not yet under control, although there has been but 1 death reported from this cause since the beginning of the present outbreak.

During the past week there were 35 new cases of measles officially reported within the city. In addition to these cases there have been reported: Enteric fever 1 case, with a fatal termination, diphtheria 2, and scarlet fever 3. There are also 2 cases of varicella in children, now under treatment, which have not been officially reported.

Mortality statistics of Matanzas for the period from February 20 to 28, 1905.

Causes of death.	Number of deaths.	Bertillon number.
Tuberculosis, pulmonary	2	27
Cræmia	2	120
Sclerosis, cerebro-spinal	1	63
Enteritis in the adult	2	106
Fever, pernicious	1	179
Broncho-pneumonia	1	92
Hemorrhage, traumatic	1	85
Measles	1	6
Athresia	1	105
Disease, cardiac (unqualified)	1	79
Total	14	

Annual average of mortality per 1,000, 10.60; estimated population, 48,000.
No quarantinable disease has been reported.

Summary of reports for month of February, 1905—Work of sanitation progressing.

During the month of February, 1905, bills of health were granted to 24 vessels leaving this port for the United States, having an aggregate of 636 crew and 223 passengers in transit for several Cuban ports. No certificates of vaccination were issued either for the Republic of Panama or the Canal Zone, as no ship cleared for those ports during the past month.

A rough estimate of the number of cases of measles existing in the city at present, according to reliable information, is over 300, of which only 116 have been officially reported during the month. Local practitioners are of the opinion that the epidemic is now assuming a severer form, which fact accounts for the 2 deaths reported of recent date. Other contagious diseases reported during the month of February are diphtheria, 4; scarlet fever, 4; and leprosy 1.

The total mortality from all causes during the month has been 43, showing a decrease of 9 as compared with January last, and 22 less than for the corresponding month in 1904. The greatest mortality has been due, as usual, to diseases of the lungs, particularly to pul-

monary tuberculosis, followed by affections of the circulatory system, as will be observed by the following summary report:

General diseases.	Number of deaths.
Tuberculosis.....	7
Tetanus.....	1
Fever, pernicious.....	1
Measles.....	2
Diseases of the nervous system.....	2
Diseases of the circulatory system.....	7
Diseases of the respiratory system.....	6
Diseases of the digestive system.....	4
Diseases of the genito-urinary system.....	3
Puerperal state.....	1
Other causes.....	9
Total.....	43

Annual average of mortality per 1,000, 10.75; estimated population, 48,000.
 No quarantinable disease has been reported.
 The work of cleaning and sanitation of the city is progressing.

Report from Santiago—Inspection of vessels—Severe hailstorm—Scarcity of water—Mortuary statistics.

Acting Assistant Surgeon Wilson reports, March 7, as follows:

During the week ended March 4, 1905, bills of health were issued to 4 vessels bound for the United States.

No quarantinable disease has been reported.

Yesterday about 1.30 p. m. we had a hailstorm of short duration. The hailstones were about the size of cherry seeds. This is the first one in this city for many years. It was followed by a heavy rain, lasting about two hours. The rain did a little good, but there was not enough of it to affect the water supply, which of late has been so scanty that the water is turned on only a few hours at a time. We are approaching the end of the dry season. Private cisterns have become very low, or empty.

Mortuary report for the week ended March 4, 1905.

Cause of death.	Number.	Bertillon number.
Malarial fever.....	1	4
Tubercle of lungs.....	3	27
Anæmia.....	1	54
Cerebral hemorrhage.....	1	64
Organic heart disease.....	2	79
Cerebral embolism.....	1	82
Disease of lungs.....	1	99
Chronic enteritis.....	1	105
Gastro enteritis, 2 years and over.....	1	106
Persistence of the foramen ovale.....	1	150
Congenital debility.....	1	151
Senility.....	1	154
Total.....	15	

Annual rate of mortality for the week, 17.14 per 1,000; estimated population, 45,500.

ECUADOR.

Report from Guayaquil—Mortality—Yellow fever and smallpox—Fumigation of steamship Chile for Ancon—Smallpox at Porto Viejo.

Acting Assistant Surgeon Gruver reports, February 23, as follows:
 Week ended February 21, 1905. Present officially estimated popu-

lation, 60,000. Mortality from all causes, 64, as follows: Yellow fever, 4; pernicious fever, 3; infectious fever, 1; fever (without classification), 10; enteric diseases, 14; smallpox, 2; gripe, 2; from all other diseases, 20.

February 17, 1905, steamship *Chile* from Chilean and Peruvian ports cleared for Ancon, Canal Zone, taking 2 cabin and 11 steerage passengers from this port. Five cabin and 11 steerage passengers from ports south were placed in quarantine to complete the required time from ports of last exposure. This vessel was fumigated. Three immune certificates were issued and 43 pieces of baggage inspected.

The American consular agents at Bahia de Caraquez and Esmeraldas report that no quarantinable disease exists in their consular agencies. The consular agent at Manta, however, reports smallpox present at Porto Viejo.

PANAMA.

Reports from Colon—Inspection of vessels—Mortality—Yellow fever report.

Acting Assistant Surgeon Mohr reports, February 25, 27, and 28, as follows:

During the week ended February 25, 1905, the following vessels cleared for ports in the United States and were granted bills of health:

American steamship *Advance* for New York, February 22, with 62 crew and 60 passengers.

Norwegian steamship *Preston* for New Orleans via Limon, February 22, with 32 crew and 6 passengers.

Norwegian steamship *Brighton* for New Orleans via Bocas del Toro, February 23, with 24 crew and 6 passengers.

British steamship *Antillian* for New Orleans via Jamaica and Mexican ports, February 25, with 53 crew and 38 passengers.

The following remark was made on all bills of health: "Since February 1, 1905, there have been 6 cases of yellow fever and 3 deaths reported in Panama."

During week ended February 27, 1905, the following deaths were officially reported in Colon:

1 St. Lucian, male, 1½ years, malaria; 1 Panaman, female, 1½ years, dropsy; 1 Panaman, male, 1 year, cerebral fever; 1 Jamaican, male, 34 years, pulmonary tuberculosis; 1 Jamaican, male, 53 years, dropsy; 1 Jamaican, male, 22 years, heart disease.

There have been no cases of quarantinable disease reported in Colon.

The inclosed official report from the records of the chief sanitary officer shows the total number of cases of yellow fever since July 1, 1904, among which are 4 new cases reported since my report of last week.

Official yellow fever report.

Total number of cases on the Isthmus of Panama from July 1, 1904, to February 1, 1905, 31; deaths, 10. Total number of cases from February 1, 1905, to February 25, 1905, 10; deaths, 4. Total 41 cases, 14 deaths.

The last 4 cases of the above were reported as follows: 1 Austrian, admitted to hospital February 21, 1905; 1 American, admitted to hospital February 23, 1905; 1 Spaniard, admitted to hospital February 23, 1905; 1 Peruvian, admitted to hospital February 24, 1905.

Statement of yellow fever situation July 1, 1904, to February 27, 1905.

The following is received from the chief sanitary officer of the Isthmian Commission:

Total number of cases on Isthmus of Panama from July 1, 1904, to February 1, 1905, 31; deaths, 10. Total number of cases from February 1, 1905, to February 23, 1905, 6; deaths, 4. Last case, American, taken sick February 20, 1905; admitted to hospital February 20, 1905; doing well.

Total number of cases from February 1, 1905, to February 24, 1905, 8; deaths, 4.

Last cases: D. M., American, admitted to hospital February 23, 1905; J. Z., Austrian, admitted to hospital February 21, 1905.

Total number of cases from February 1, 1905, to February 25, 1905, 10; deaths, 4.

Last cases: F. L. A., Spaniard, taken sick February 21, admitted to hospital February 23, 1905; M. R., Peruvian, taken sick February 21, admitted to hospital February 24, 1905.

Detailed information as to cases may be obtained upon application to the chief sanitary officer.

Total number of cases from February 1, 1905, to February 28, 1905, 12; deaths, 5.

Last cases: W. B. L., American, taken sick February 19, admitted to hospital February 23, 1905; F. H., American, taken sick February 24, admitted to hospital February 27, 1905.

PERU.

Report from Callao—Recurrence of plague in Callao—Plague situation in Peru and Chile.

Assistant Surgeon Lloyd reports, February 16, as follows:

After a lapse of more than ninety days another case of plague presented itself in Callao and was removed to the lazaretto near Lima.

On February 11 there remained under treatment in Peru the following cases of plague, as reported to me by the director of health at Lima: Lima, 3 cases; Haunchaca, 16; Guadalupe, 25; Villa de Eten, 7; Chiclayo, 5; Lambayeque, 7. Total, 63 cases.

Plague is reported in Pisagua, Chile, by the Peruvian Consul. The disease is slowly but surely making its way into the interior of Peru and perhaps Chile as well, and may be considered as steadily advancing.

PORTO RICO.

Report from Ponce—Summary of transactions of service, February, 1905.

Acting Assistant Surgeon Torres reports, March 4, as follows:

Month of February, 1905.

Vessels inspected.....	20
Bills of health issued.....	24
Passengers inspected:	
Incoming.....	72
In transit.....	796
Crew inspected.....	1,935
Vessels in quarantine.....	4
Immigrants inspected.....	17
Rejections.....	0
Number of passengers detained in quarantine.....	0

WEST INDIES.

Reports from Barbados—Inspection of vessels—Examination of laborers for work on the Panama Canal—Inspection of arrivals from Grenada on account of smallpox.

Assistant Surgeon Ward reports, February 22, and March 3, as follows:

During the week ended February 18, 1905, bills of health were issued to 6 steamships, and 4 sailing vessels, with 340 crew, 1 stowaway, 91 cabin, 63 steerage, and 57 deck passengers. Of this number I inspected 5 steamships, 2 sailing vessels, 241 crew, 1 stowaway, 21 cabin, 63 steerage, and 57 deck passengers, of whom 3 crew, 22 cabin, and 5 steerage were taken on at this port for ports in the United States. Three persons wishing third-class passages for the States were recommended for rejection on account of suffering from recurring diseases. There were in transit 4 steerage for Dominica, 3 for St. Lucia, and 1 for St. Croix, and 2 cabin passengers for Trinidad.

On February 13, I viséed the bill of health of the Republic of Panama, issued to the Royal Mail steamship *Atrato*, bound to Colon, via ports on the Caribbean Sea, with 151 crew, 24 laborers and passengers. There were 14 certificates of vaccination issued to deck passengers for Colon, and 113 to laborers recruited for work on the Panama Canal.

For the two weeks ended February 18, I examined 179 men to ascertain their fitness to act as laborers for work on the Panama Canal, and rejected 47.

To the date of this report the quarantine authorities of this port have heard nothing further relative to smallpox in Grenada, West Indies. As far as can be ascertained at the present writing the Windward and the Leeward islands have declared a quarantine against all vessels from Grenada.

All vessels from Grenada calling at Barbados since the 20th instant are boarded by the health officer, and all persons aboard are inspected. Passengers for this port must have been vaccinated within ten years or not later than fourteen days from the date of arrival. Cabin passengers not fourteen days from Grenada are placed under surveillance to complete that period, while steerage and deck passengers, when shipped, are held at the Pelican Island quarantine station instead.

The general health of the island of Barbados is good; no quarantinable diseases have been reported.

During the week ended February 25, 1905, bills of health were issued to 3 steamships and 11 sailing vessels, with 256 crew and no passengers. Of this number I inspected 1 steamship, 8 sailing vessels, 145 crew, and no passengers.

The quarantine authorities of this port have received a report from Grenada, West Indies, dated February 23, in which it is stated that since February 9 10 additional cases of smallpox, or as it is there termed "the eruptive diseases," have developed in the same infected district, i. e., 14 miles from St. George, the principal town and port of entry. No cases, it is said, have occurred in any other part of Grenada.

On February 24 the Governor of Barbados, on the recommendation of the quarantine board, declared Grenada to be a place infected with

smallpox and Para to be a place infected with plague. All precautions are now being taken at this port to prevent the ingress of infection from these places.

During the month of December, 1904, there were 17 wet days and a total rainfall of 2.54 inches. The maximum temperature for the month was 86.7° F., the mean 78.2° F., and the minimum 67.4° F. on the 4th and the 14th. The average velocity of the wind per hour was 11.8 miles.

Measles and influenza are still prevailing on this island; the latter disease is quite mild, but very extensive. There are at present sporadic cases of chicken pox, which is known as glass pox, among the natives.

No quarantinable diseases have been reported; the general health of Barbados continues good.

FOREIGN AND INSULAR STATISTICAL REPORTS OF COUNTRIES AND CITIES—YEARLY AND MONTHLY.

AFRICA—*Lourenço Marques*.—Month of December, 1904. Estimated population, 10,000. Total number of deaths, 48, including leprosy 1, and 14 from phthisis pulmonalis.

BAHAMAS—*Governors Harbor*.—Week ended February 4, 1905. Estimated population, 1,500. No deaths and no contagious diseases.

Green Turtle Cay, Abaco.—Four weeks ended February 2, 1905. Estimated population, 3,314. No deaths and no contagious diseases reported.

CUBA—*Habana*.—Ten days ended February 20, 1905. Estimated population, 275,000. Total number of deaths, 139, including diphtheria 1, enteric fever 1, measles 1, leprosy 3, and 30 from tuberculosis.

DUTCH GUIANA—*Paramaribo*.—Month of January, 1905. Estimated population, 33,003. Total number of deaths, 98. No contagious diseases reported.

FRANCE—*Nantes*.—Two weeks ended February 22, 1905. Estimated population, 130,000. Total number of deaths not reported. Four cases of smallpox reported.

Rouen.—Month of January, 1905. Estimated population, 116,316. Total number of deaths, 339, including enteric fever 2, whooping cough 3, smallpox 1, and 52 from tuberculosis.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 76 great towns in England and Wales during the week ended February 18, 1905, correspond to an annual rate of 17.3 per 1,000 of the aggregate population, which is estimated at 15,609,377.

London.—One thousand five hundred and six deaths were registered during the week, including measles 28, scarlet fever 12, diphtheria 11, whooping cough 33, enteric fever 4, smallpox 1, and 7 from diarrhea. The deaths from all causes correspond to an annual rate of 16.8 per 1,000. In Greater London 2,076 deaths were regis-

tered. In the "outer ring" the deaths included 1 from diphtheria, 2 from measles, 9 from whooping cough, and 2 from diarrhea.

Ireland.—The average annual death rate represented by the deaths registered during the week ended February 18, 1905, in the 21 principal town districts of Ireland was 22.3 per 1,000 of the population, which is estimated at 1,093,959. The lowest rate was recorded in Newry, viz, 4.2, and the highest in Queenstown, viz, 46.1, per 1,000. In Dublin and suburbs 175 deaths were registered, including diphtheria 1, enteric fever 3, measles 2, whooping cough 1, diarrhea 1, and 40 from tuberculosis.

Scotland.—The deaths registered in 8 principal towns during the week ended February 18, 1905, correspond to an annual rate of 18.9 per 1,000 of the population, which is estimated at 1,749,917. The lowest rate of mortality was recorded in Leith, viz, 12.8, and the highest in Perth, viz, 24.4, per 1,000. The aggregate number of deaths registered from all causes was 633, including diphtheria 3, measles 4, and 25 from whooping cough.

JAPAN—Formosa.—Month of December, 1904. Estimated population, 2,922,585. Total number of deaths not reported. Four deaths from enteric fever and 183 from plague.

Month of January, 1905. Five deaths from enteric fever and 251 from plague reported.

JAVA—Batavia.—Two weeks ended January 28, 1905. Estimated population, 160,000. Total number of deaths not reported. No contagious diseases reported.

SPAIN—Barcelona.—Ten days ended February 20, 1905. Estimated population, 600,000. Total number of deaths, 411, including diphtheria 2, enteric fever 2, measles 4, whooping cough 2, smallpox 20, and 42 from tuberculosis.

SWITZERLAND.—Reports for the two weeks ended February 11, 1905, from 18 cities and towns having an aggregate population of 827,000, show a total of 687 deaths, including diphtheria 7, enteric fever 1, measles 20, scarlet fever 3, whooping cough 12, and 89 from phthisis pulmonalis.

Cholera, yellow fever, plague, and smallpox, December 31, 1904, to March 17, 1905.

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from American Consuls through the Department of State, and from other sources.]

[For reports received from June 25 to December 30, 1904, see PUBLIC HEALTH REPORTS for December 30, 1904.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]
