*Rio de Janeiro, Brazil.*—Acting Asst. Surg. W. J. S. Stewart.

CUBA.

*Habana.*—Surg. C. P. Wertenbaker; Acting Asst. Surg. J. M. Delgado.

*Cienfuegos.*—Acting Asst. Surg. R. L. McMahon.

*Matanzas.*—Acting Asst. Surg. E. F. Nunez.

*Nuevitas.*—Acting Asst. Surg. E. F. McConnell.

*Santiago.*—Acting Asst. Surg. R. Wilson.

WEST INDIES.

*Castries, St. Lucia.*—Passed Asst. Surg. L. D. Fricks.

*Bridgeton, Barbados.*—Asst. Surg. W. K. Ward.

CANAL ZONE, WITH ISTHMIAN CANAL COMMISSION.

*Ancon.*—Surg. H. R. Carter, Asst. Surg. C. C. Pierce.

*Cristobal.*—Surg. J. C. Perry.

*Colon.*—Passed Asst. Surg. R. H. von Ezdorf, Passed Asst. Surg. H. A. Stansfield.

*Collective investigation as to prevalence of epidemic cerebro-spinal meningitis.*

On account of the reported prevalence of cerebro-spinal meningitis in a number of States and localities, the Bureau of Public Health and Marine-Hospital Service is endeavoring to collect statistics as to the prevalence of this disease since July 1, 1904. It has also been determined to include this in the regular list of diseases which are reported weekly by municipal health authorities (new Form 8960).

The following circular letter has therefore been addressed to the secretaries of State boards of health and to municipal health officers:

(Circular Letter.)

TREASURY DEPARTMENT,  
PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE,  
*Washington, March 16, 1905.*

*Health Officer or Secretary Board of Health.*

SIR: You are requested to furnish this Bureau information concerning cerebro-spinal meningitis as follows:

1. The number of cases and deaths by months which have occurred during the period from July 1, 1904, to April 1, 1905, in the territory under your jurisdiction.

2. You are requested to make weekly reports hereafter of cases and deaths from cerebro-spinal meningitis on blank form 133 (new No. 8960), a supply of which you already have, writing the words cerebro-spinal meningitis in place of Asiatic cholera on the blank form.

Respectfully,

WALTER WYMAN,  
*Surgeon-General.*

[Reports to the Surgeon-General, Public Health and Marine-Hospital Service.]

INSPECTION SERVICE, MEXICAN BORDER.

#### *Report from Cape Colony—Suspect plague—Examination for plague-infected animals—Infectious diseases.*

COLONIAL SECRETARY'S OFFICE,  
*Cape Town, Cape of Good Hope, February 6, 1905.*

The following report by the medical officer of health for the Colony on the occurrence of bubonic plague in the Cape Colony for the week ended February 4, 1905, is published for general information.

NOEL JANISCH,  
*Under Colonial Secretary.*

*Port Elizabeth.*—No case of plague was discovered during the week. At the plague hospital no case was discharged or died. No cases remain under treatment. One hundred and six rats (4 found dead) and 103 mice (11 found dead) were bacteriologically examined during the week, of which 1 rat and 3 mice proved to be plague infected.

*East London.*—One case suspicious of being plague was discovered during the week, namely, a native male (found dead) on the 29th ultimo. At the plague hospital no case was discharged or died. Two cases remain under treatment. Two hundred and sixteen rats (108 found dead), 85 mice (23 found dead), and 1 cat were bacteriologically examined during the week, of which 1 mouse proved to be plague infected.

*Other districts of the Colony.*—No plague infection was discovered either in man or animals. Four hundred and eighteen rodents were examined during the week from the Cape Town Harbor board area and the shipping in the harbor, and 485 were examined by the medical officer of health for the city from the Cape Town municipal area.

A. JOHN GREGORY,  
*Medical Officer of Health for the Colony.*

#### *Return of cases of infectious disease in the Cape division during the week ended February 4, 1905.*

## AUSTRIA-HUNGARY.

*Report from Trieste—Inspection of emigrants.*

Consul Hossfeld reports, February 27, as follows:

On February 23, 1905, the Cunard steamship *Ultonia* sailed from this port bound for New York, via Fiume and Palermo, with 121 emigrants.

Of the whole number of emigrants presenting themselves for inspection 7 were rejected.

The baggage of all the emigrants, consisting of 114 pieces, was disinfected.

On February 25, 1905, the Cunard steamship *Slavonia* sailed from Trieste for New York, via Fiume and Palermo.

Fifty-four steerage passengers were inspected and embarked and 2 rejected.

Thirty-three pieces of baggage belonging to the steerage passengers were disinfected.

## BRAZIL.

*Report from Rio de Janeiro—Inspection of vessels—No further cases of plague reported from Argentine Republic—Mortuary statistics—Plague, smallpox, and yellow fever—Epidemic whooping cough in Uberaba.*

Acting Assistant Surgeon Stewart reports, February 20, as follows:

During the week ended the 12th instant the following vessels were inspected and issued bills of health from this office:

On the 6th instant the British steamship *Cumeria*, for Baltimore, with a cargo of manganese ore; no passengers and no change in the crew personnel. No other vessel left this port for United States, Territorial ports, Cuban or Canal Zone ports. By a mistake in my last report, for the week ended the 5th instant, I stated that no vessels had left this port during that week. There was one, inadvertently

omitted. This was the British steamship *Byron*, for New York, with a cargo of coffee, 6 first-class and 22 steerage passengers from this port, and no change in the personnel of the crew.

*Bubonic plague in Argentine Republic.*

Having seen press statements of plague in Buenos Ayres, I wrote the American minister in Argentina and received the following reply:

AMERICAN LEGATION,  
Buenos Ayres, February 7, 1905.

MY DEAR DOCTOR STEWART: In response to your letter of the 29th of January last, inquiring as to the presence of bubonic plague in this city, I believe there was a single case in one of the hospitals. I have no knowledge of other cases.

Respectfully, yours,

A. M. BEAUPRE,  
American Minister to Argentina.

There have, however, been no further reports of plague in the city of Buenos Ayres.

During the year 1904, according to reports just received, the hospitals of Buenos Ayres received for treatment for all classes of diseases, 19,000 patients.

*Mortuary statistics from the State of São Paulo.*

*Sao Paulo* (capital, population, estimated, 230,000).—Week ended January 22, 1905. Total deaths, 107. Stillbirths, 14; dysentery, 1; malarial fevers, 5; tuberculosis, 8; syphilis, 1; cancer, 1; other general diseases, 1; diseases of nervous system, 11; of the circulatory system, 8; of the respiratory system, 10; of the digestive system, 31; of the urinary system, 4; of the skin, 1; congenital debility, 6; senile debility, 1; violence, except suicide, 2; and diseases badly defined, 16.

By ages, up to 2 years, 53; 2 to 5 years, 9; 5 to 10 years, 4; 10 to 20 years, 8; 20 to 50 years, 18; more than 50 years, 13; age unknown, 2. Natives, 82; foreigners, 24; nationality unknown, 1.

Week ended January 29, 1905. Total deaths, 112. Stillbirths, 16; bubonic plague, 1; measles, 3; enteric fever, 2; dysentery, 2; malarial fevers, 2; tuberculosis, 6; tuberculosis, except pulmonary variety, 1; syphilis, 1; cancer, 1; diseases of nervous system, 9; of the circulatory system, 7; of the respiratory system, 9; of the digestive system, 30; of the urinary system, 4; of the skin, 1; accidents during puerperal state, 1; congenital debility, 7; violence, except suicide, 2; diseases badly defined, 23.

By ages, up to 2 years of age, 60; 2 to 5 years, 11; 5 to 10 years, 4; 10 to 20 years, 4; 20 to 50 years, 20; more than 50 years of age, 12; age unknown, 1. Natives, 93; foreigners, 19.

Week ended February 5, 1905. Total deaths, 99. Stillbirths, 7; measles, 3; whooping cough, 4; enteric fever, 4; dysentery, 2; cholera nostras, 1; beriberi, 1; malarial fevers, 2; tuberculosis, 4; cancer, 1; other general diseases, 2; diseases of nervous system, 8; of the circulatory system, 4; of the respiratory system, 13; of the digestive system, 28; of the urinary system, 2; septicæmia, 1; congenital debility, 8; violence, except suicide, 1; diseases badly defined, 10.

By ages, up to 2 years, 53; 2 to 5 years, 10; 5 to 10 years, 4; 10 to 20 years, 3; 20 to 50 years, 16; more than 50 years, 13. Natives, 80; foreigners, 19.

Daily averages of deaths for the 3 weeks: Week ended January 22, 1905, 15.28; week ended January 29, 1905, 16; week ended February 5, 1905, 14.14.

*Santos*.—Week ended January 22, 1905. Total deaths, 37. Stillbirths, 1; variola, 1; whooping cough, 1; enteric fever, 1; malarial fevers, 4; tuberculosis, 4; cancer, 1; anchylostomiasis, 1; other general diseases, 1; diseases of nervous system, 4; of the circulatory system, 2; of the respiratory system, 7; of the digestive system, 2; of the urinary system, 1; congenital debility, 1; senile debility, 1; violence, except suicide, 3; diseases badly defined, 2. Natives, 31; foreigners, 6. Daily average of deaths, 5.25.

Week ended January 29, 1905. Total deaths, 27. Stillbirths, 5; whooping cough, 2; malarial fevers, 4; tuberculosis, 2; cancer, 1; diseases of nervous system, 1; of circulatory system, 2; of respiratory system, 1; of digestive system, 6; accidents during puerperal state, 1; diseases of skin, 1; violence, except suicide, 1; diseases badly defined, 5. Natives, 21; foreigners, 6. Daily average of deaths, 3.85.

Week ended February 5, 1905: Total deaths, 32. Stillbirths, 2; whooping cough, 1; malarial fevers, 2; tuberculosis, 5; diseases of nervous system, 3; of the circulatory system, 4; of the respiratory system, 3; of the digestive system, 4; congenital debility, 4; violence, except suicide, 2; poisoning, 1; diseases badly defined, 3.

Natives, 21; foreigners, 11. Daily average of deaths, 4.57.

*Campinas*.—Week ended January 22, 1905. Total deaths, 42. Stillbirths, 2; whooping cough, 1; tuberculosis, 4; septicæmia, 1; diseases of nervous system, 2; of the circulatory system, 1; of the respiratory system, 3; of the digestive system, 13; of genital organs, 1; accidents during puerperal state, 1; congenital debility 4; senile debility, 2; violence, except suicide, 1; diseases badly defined, 8.

Natives, 36; foreigners, 6. Daily average of deaths, 6.

Week ended January 29, 1905. Total deaths, 22. Stillbirths, 2; tuberculosis, 1; septicæmia, 1; cancer, 1; other general diseases, 1; disease of nervous system, 1; of the circulatory system, 2; of the respiratory system, 2; of the digestive system, 8; disease of skin, 1; congenital debility, 3; diseases badly defined, 2.

Natives, 20; foreigners, 2. Daily average of deaths, 3.14.

Week ended February 5, 1905: Total deaths, 26. Stillbirths, none; malarial fever, 1; septicæmia, 1; diseases of nervous system, 5; of the circulatory system, 2; of the respiratory system, 3; of the digestive system, 9; of the urinary system, 1; of the skin, 1; congenital debility, 2; senile debility, 1, and diseases badly defined, 1.

Natives, 22; foreigners, 4. Daily average of deaths, 3.71.

*Port of Beira, Africa, declared free from plague.*

A dispatch of date of the 4th instant from Lisbon, Portugal, declares that the port of Beira, Africa, is free from any cases of bubonic plague.

*Epidemic of whooping cough in Uberaba, State of Minas Geraes.*

A dispatch, date of the 8th instant, from Uberaba, State of Minas Geraes, Brazil, reports that a very severe epidemic of whooping cough has occurred there. The attacks are of great severity, and during the week before the report was made there had been 4 deaths from this cause.

*Mortality in Nitheroy, State of Rio de Janeiro.*

During the six months ended January 1, 1905, there were in this city, the capital of the State, 1,007 deaths from all causes, as follows: Bubonic plague, 16; variola, 248; whooping cough, 2; grippe, 24; enteric fever, 5; dysentery, 3; beriberi, 1; leprosy, 1; erysipelas, 5; malarial fevers, 25; tuberculosis, 135; septicæmia, 11; syphilis, 3; cancer, 7; scurvy, 1; diabetes, 1; anæmia, 4; alcoholism, 1; diseases of nervous system, 47; of the circulatory system, 67; of the respiratory system, 89; of the digestive system, 179; of the urinary system, 20; of the puerperal state, 5; of the skin, etc., 1; of early age, 48; senile debility, 21; violence, 19; diseases badly defined, 11; and from causes unknown, 6. Natives, 958; foreigners, 56; nationality unknown, 3. To 1 year of age, 230; 1 to 5 years, 163; 5 to 10 years, 48; 10 to 20 years, 88; 20 to 30 years, 174; 30 to 40 years, 105; 40 to 50 years, 72; 50 to 60 years, 43, and more than 60 years of age, 78; age unknown, 6. By months the deaths occurred as follows: July, 161; August, 187; September, 156; October, 160; November, 178, and December, 165.

*Mortality report for Rio de Janeiro, week ended February 12, 1905.*

During this week there were in all 268 deaths. Yellow fever caused 2 deaths, with 8 new cases, leaving in São Sebastião hospital 7 cases under treatment at the end of the week. From the 1st of January this year to date there have been 33 cases and 10 deaths, showing clearly that this disease is still firmly fixed in this locality.

Bubonic plague caused 3 deaths, with 14 new cases reported, and leaving 43 cases under treatment at the plague hospital. Variola caused 9 deaths, with 19 new cases, leaving at the end of the week 55 cases under treatment. Both yellow-fever deaths occurred in hospital, as did 2 of the deaths from plague.

Other causes of deaths were as follows: Measles, 2; grippe, 3; dysentery, 1; beriberi, 3; erysipelas, 1; malarial fevers, 7; tuberculosis, pulmonary form, 53, other forms, 4; septicæmia, 2; cancers, 7; other general diseases, 1; diseases of nervous system, 42; of the respiratory system, 23; of the circulatory system, 44; of the digestive system, 37; of the urinary system, 6; of the skin, 1; congenital debility, 7; senile debility, 4; violence, except suicide, 14; suicide, 1; and diseases badly defined, 1.

By ages, to 1 year, 48; 1 to 5 years, 29; 5 to 10 years, 9; 10 to 20 years, 8; 20 to 30 years, 38; 30 to 40 years, 36; 40 to 50 years, 25; 50 to 60 years, 34, and more than 60 years, 41.

Natives, 200; foreigners, 65; nationality unknown, 3.

By localities in houses, homes, etc., 184; in civil hospitals, 27; in military hospitals, 6; in Santa Casa de Misericórdia, 46; in asylums, convents, etc., 2; in ships in port, none; in unknown localities, 3.

Daily average number of deaths 38.28, compared with 35.14 for last week, and with 48 for the corresponding week of 1904. The coefficient per each 1,000 of the estimated population, 16.44.

The highest range of the thermometer was 34° C. and the lowest was 23.9° C., with an average for the week of 27.8° C. The total rainfall was 19.38 mm.

## CHILE.

*Report from Santiago—Spread of plague—Smallpox prevalent.*

The following is received from the American legation under date of March 16:

Plague has appeared Chanaral. Suspected cases occur daily Iquique. Continuing to devastate Pisagua. \* \* \* Smallpox also prevalent.

## CUBA.

*Reports from Cienfuegos—Inspection of vessels—Summary of reports for month of February, 1905—Measles and varicella.*

Acting Assistant Surgeon McMahon reports March 7 and 14, as follows:

During the week ended March 4, 1905, bills of health were issued to 4 vessels, with a total crew of 161 and 10 passengers. All of the vessels were in good sanitary condition and there was no sickness aboard when the vessels cleared from this port.

*Report for the month of February, 1905.*—Vessels inspected and bills of health issued, 17; crews inspected (no sickness), 494; passengers inspected (no sickness), 22.

*Mortuary report.*—Tuberculosis, 4; malaria, 3; pneumonia, 1; tetanus, infantile, 3; gastro-intestinal inflammatory diseases, 6; diseases of the heart and blood vessels, 9; diseases of the liver, 3; diseases of the lungs, not tubercular, 3; diseases of the kidneys, 1; other causes, 11; total 44.

There have been a few cases of varicella and measles reported in the city, but no fatalities.

No improvement has been made in the sanitary condition of the city during this month except in the cleaning of the streets. The city recently received an appropriation of \$30,000, to be expended in sanitary improvements, and \$10,000 of this amount has been applied to the street-cleaning department. I am informed the remainder will be used to build a new slaughterhouse.

During the week ended March 11, 1905, bills of health were issued to 5 vessels with a total crew of 136, no passengers, for ports in the United States. All of the vessels were in good sanitary condition, and no sickness on board.

No quarantinable disease arrived at this port during this week.

There have been a few new cases of varicella and measles reported in the city.

*Report from Habana—Inspection of vessels—Vessels from which passengers were landed at Tricornia quarantine station and sent to hospital—Mortuary statistics.*

Surgeon Wertenbaker reports, March 16, as follows:

Week ended March 11, 1905.

Vessels inspected and bills of health issued .....	24
Crew of outgoing vessels inspected .....	1,094
Passengers of outgoing vessels inspected .....	1,260
Pieces of freight passed (salted hides) .....	525

The following vessels landed sick passengers at the quarantine station of Triscornia, who were sent to hospital for treatment.

February 17, steamship *Habana*, 1 passenger with grippe.

February 18, steamship *Chalmette*, 1 passenger with broncho-pneumonia.

February 22, steamship *Maria Christina*, 1 passenger with indigestion.

February 27, steamship *Esperanza*, 1 passenger with enteric fever.

No quarantinable disease has been reported in the city during the week.

*Mortuary statistics for the ten days ended February 28, 1905.*

Disease.	Number of deaths.
Tuberculosis.....	33
Enteric fever.....	2
Measles.....	1
Grippe.....	2
Cancer.....	10
Leprosy.....	1
Broncho-pneumonia.....	5
Enteritis (under 2 years).....	4
Enteritis (over 2 years).....	1

Total number of deaths from all causes, 131.

*Certificate of length of stay in Habana to be given to all passengers from other points of Cuba embarking at Habana for Mobile, New Orleans, and Galveston.*

WASHINGTON, March 16, 1905.

Surg. C. P. WERTENBAKER,

*Public Health and Marine-Hospital Service, Habana, Cuba.*

SIR: I have to inform you that the quarantine officers of Alabama and Louisiana have requested that the officer of the Service stationed at Habana be authorized to give certificates to all passengers from other points in Cuba embarking at Habana for Mobile, New Orleans, and Galveston, showing that they have remained continuously in Habana a sufficient length of time to prevent their reaching those ports within five days from the time of their first reporting to the medical officer of the Service at Habana, and you are hereby authorized to issue such certificates during the close quarantine season beginning April 1, 1905.

The certificates should be issued upon request of the various steamship lines interested.

Respectfully,

WALTER WYMAN,  
*Surgeon-General.*

*Report from Matanzas—Inspection of vessels—Epidemic measles—Enteric fever and scarlet fever—Mortuary statistics.*

Acting Assistant Surgeon Nuñez reports March 14, as follows:

During the week ended March 11, 1905, bills of health were granted to 5 vessels bound for the United States in good sanitary condition.

There has been no improvement as to the prevailing epidemic of measles during the past week. There have been 37 new cases with 1

death officially reported. In addition to these, 3 cases of scarlatina, and 1 case and 1 death from enteric fever have been reported during same period.

The continued drought which for over four months had prevailed throughout this district, rendering the city exceedingly dusty and thus probably favoring the propagation of contagious diseases, has been interrupted these last two days by heavy rains, which, if persistent at convenient intervals, may tend to improve the existing sanitary condition.

The mortality for the first ten days of March is considerably higher than for any corresponding period either in January or February, 1905, as will be observed by the following statistics:

Causes of death.	Number of deaths.	Bertillon number.
Fever, enteric.....	1	1
Grippe.....	1	2
Tuberculosis, pulmonary.....	5	27
Œdema, pulmonary.....	1	95
Hemorrhage of subclavian artery.....	1	85
Encephalitis.....	1	60
Insufficiency, mitral.....	1	79
Measles.....	1	6
Pneumonia, traumatic.....	1	98
Ulcer of stomach.....	1	103
Nephritis.....	2	119
Arterio-sclerosis.....	2	81
Hemorrhage, umbilical.....	1	152
Septicæmia, puerperal.....	1	137
Anæmia.....	1	54
Congestion, pulmonary.....	1	95
Broncho-pneumonia.....	1	92
Meningitis, tubercular.....	1	28
<b>Total.....</b>	<b>24</b>	<b>.....</b>

Annual rate of mortality per mille, 18.25; estimated population, 48,000.  
No quarantinable disease has been reported.

*Reports for Nuevitas—Inspection of vessels—Mortuary statistics, month of February, 1905.*

Acting Assistant Surgeon McConnell reports, March 6 and 13, as follows:

During the week ended March 4, 1905, 1 bill of health was issued.

No quarantinable diseases have been reported in this section.

The street cleaning has been resumed under the direction of the local authorities.

*Mortuary statistics for the month of February, 1905.*—Accident, 1; enteritis, 1; infantile cholera, 1; infantile tetanus, 1; endocarditis, 1; total 5.

During the week ended March 11, 1905, two bills of health were issued to vessels bound for the United States; 105 crew and 13 passengers inspected. No quarantinable disease has been reported.

*Report from Santiago, month of February, 1905.*

Acting Assistant Surgeon Wilson reports, March 14, as follows:

*Report of transactions for the month of February, 1905.*

Bills of health issued.....	18
Outgoing vessels inspected (included in the above).....	8
Crews.....	780
Passengers.....	623

Deaths from yellow fever .....	0
Deaths from other contagious diseases .....	0
Deaths from all causes (stillbirths not counted) .....	62
Cases of quarantinable diseases in city .....	0
Cases of other contagious diseases in city (diphtheria 2, suspected beriberi 1) ..	3
Vaccination certificates issued for Canal Zone and Panama .....	0

## ECUADOR.

*Report from Guayaquil—Mortality—Yellow fever—Inspection and fumigation of vessels.*

Acting Assistant Surgeon Gruver reports, March 1, as follows:

Week ended February 28, 1905. Present officially estimated population, 60,000.

Mortality from all causes, 84, as follows: Yellow fever, 7; pernicious fever, 5; infectious fever, 1; paludism, 2; fever (without classification), 12; enteric diseases, 11; tuberculosis, 12; grippe, 2; tetanus, 2; smallpox, 3; from all other causes, 27.

During the week 2 vessels were fumigated, 4 passengers and 9 pieces of baggage inspected, and 4 bills of health issued as follows: February 22, steamship *Ecuador*, a coasting steamer, cleared for Ancon and Panama, taking a bill of health for both ports—crew, 58; cabin passengers, 5; steerage, 15; total, 78. Vessel not fumigated. February 23, steamship *Loa*, from Chilean and Peruvian ports, cleared for Ancon with 2 steerage passengers from this port. Three cabin and 11 steerage passengers from ports south were placed in quarantine. February 28, steamship *Luxor*, from Hamburg via South American ports, cleared for San Francisco, via Central American and Mexican ports, with 2 steerage passengers from here. The last-named vessels were fumigated.

## INDIA.

*Report from Bombay—Mortality—Cholera, plague, and smallpox—Increasing prevalence of smallpox—Transactions of service.*

Acting Assistant Surgeon Hume reports, February 18, as follows:

*Mortality of Bombay City for the weeks ended February 7 and 14, 1905.*

	Feb. 7, 1905.	Same week last year.	Feb. 14, 1905.	Same week last year.
Plague deaths.....	450	419	537	550
Plague mortality, per 1,000 .....	30.15	27.48	35.98	36.85
Smallpox deaths .....	122	8	124	5
Cholera deaths .....	1	0	0	0
Total deaths .....	1,359	938	1,495	1,186
Total mortality, per 1,000 .....	91.06	62.85	100.17	76.12

The steadily increasing prevalence of smallpox is a cause for considerable anxiety. The European population is waking up to the fact that vaccination in infancy does not immunize for life. Each week Europeans are being taken ill with the disease.

I have the following transactions to report for the two weeks ended February 18, 1905:

Sanitary certificate No. 74 (accompanying consular invoice No. 28 of 1905), issued for 160 bales of East India wool shipped to Philadelphia. The wool was packed with naphthalene.

Sanitary certificate No. 75 (accompanying consular invoice No. 29 of

1905), issued for 137 casks of goatskins shipped to New York per steamship *Wartburg* on February 14, 1905. The skins had been soaked in brine solution and packed in water-tight casks. I do not know whether this method has been tested bacteriologically, but it seemed to the consul that it ought to be satisfactory. He tells me that similarly packed skins have been sent before and have been accepted in America. I should be glad of instructions if the method is deficient.

Sanitary certificate No. 76 (accompanying consular invoice No. 32 of 1905), issued on February 17, 1905, for 2,000 baskets of onions shipped to Manila per steamship *Ischia*.

Sanitary certificate No. 77 (accompanying consular invoice No. 33 of 1905), issued on February 17, 1905, for 2,000 baskets of onions. Shipped as above. The onions were all grown up country in districts free from cholera.

*Report from Calcutta—Cholera and plague mortality—Plague mortality in India, 1901–1905.*

Acting Assistant Surgeon Eakins reports February 16, as follows; There were no transactions at this port during the week ended February 11, 1905.

During the week ended February 11, 1905, there were 37 deaths from cholera, and 106 deaths from plague in Calcutta.

In Bengal during the week ended February 4, 1905, there were 5,921 cases of and 5,234 deaths from plague, and in India 40,812 cases and 36,117 deaths, same period.

*Plague mortality in India, 1901–1905.*

I submit the following, which I have transcribed from the Pioneer:

“The way in which the figures of plague mortality are mounting every week over any previous records shows what the country must look to endure before the disease reaches its accustomed climax in April or early May. Not only is the accession in mortality as the season advances as steady as in previous years, but the total death rate is once more moving on a level above that of the year preceding. The following figures, giving the mortality for the week covering January 31 for the last five years, show how regular is the advance of the disease, taking India as a whole from winter to winter:

1901.....	3, 415
1902.....	12, 192
1903.....	24, 500
1904.....	23, 203
1905.....	33, 087

“The one gleam of comfort about these dismal weekly returns is that there seems at least to be some sign of remission on the part of the disease in Bombay. The figures for Bombay, city and district, on the same date of the last five years stand thus:

1901.....	4, 622
1902.....	4, 200
1903.....	12, 200
1904.....	6, 670
1905.....	3, 500

“The last figure, supposing it represents the average rate of a twelve-month, would mean a mortality of 182,000 a year; but the latest actual

yearly mortality upon record (that for the official year ending with last March) is 281,269 deaths. The present rate would, therefore, represent a gain of 100,000, if maintained. More than that, the last week in January is a period in upper India when plague is very greatly above the annual mean level.

\* \* \* \* \*

“It was full time that the plague should show symptoms of relenting in Bombay. We have already mentioned that the deaths in 1903-4 came to the fearful total of 281,269. The figure represents a death rate of nearly 15½ per mille per annum on the whole population of the Presidency. In other words, the death rate from plague alone in Bombay is not short of the death rate from all causes combined in a healthy English town. And when we consider that this result has come about over a vast province embracing great differences of population, soil, and climate, of which large portions must have remained slightly infected or uninfected, one gets some idea of what such a figure means to the localities that have borne the brunt of the epidemic. One death in every 3 that occurred during the year was due to plague. Owing to plague, the total death rate reached the ominous figure of 43.91 per thousand. Thanks to the plague, the deaths over the whole Presidency largely outnumbered the births. The births were only 576,949, the deaths 811,525, leaving the Presidency with a population diminished in the course of the year in round numbers by a quarter of a million souls. Admitting that the returns are probably very inexact, there is no reason to suppose that the deaths are more fully reported than the births, or that more general deaths are ascribed to plague than plague deaths to general causes. Looked at with reservations, the figures tell a terrible story coming at the end of seven previous years of affliction, and the least indication that the disease is at last on its descending path is a sign to be hailed with thankfulness.”

#### ITALY.

*Report from Naples—Inspection of vessels—Infectious diseases in Italy—Plague and cholera in various countries—Quarantine regulations—History of plague case on steamship Crewe Hall at Liverpool from Rangoon—Mortality in great cities—Hygienic exhibition at Milan, 1906.*

Passed Assistant Surgeon Eager reports, February 27, as follows:

During the week ended February 25, 1905, the following ships were inspected at Naples, Messina, and Palermo:

#### NAPLES.

Date.	Name of ship.	Destination.	Steerage passengers inspected and passed.	Pieces of large baggage inspected and passed.	Pieces of baggage disinfected.	Number of steerage passengers recommended for rejection.

ITALY—INFECTIOUS DISEASES.

For the week ended January 23, 1905, the following reports were officially registered:

*Smallpox.*—In the province of Lecce there were reported 6 cases only. Of these, 4 occurred at S. Vito dei Normanni. Cases were reported at Palermo, Monreale, Carini, and Parco, in the province of Palermo. From January 1 to February 17, 1905, 41 cases were reported at Catania. Many cases were reported at Assoro, Caltagirone, Giarre, and Belpasso, in the province of Catania. Cases were reported at Augusta (Syracuse), Matera (Potenza), and Rocchetta S. Antonio (Avellino).

*Measles.*—Epidemic in several communes in the province of Belluno. Many cases are reported at Florence.

*Enteric fever.*—Very few cases are reported in Italy.

*Diphtheria.*—Cases are reported at Milan, Rome, and Catania.

*Pellagra.*—A great number of cases are still reported in the province of Perugia.

PLAGUE—EGYPT.

During the week ended February 9, 1905, there were reported at Suez 4 cases of plague, with 1 death, making a total number since January 1 of 16 cases and 11 deaths. In the province of Kaliubieh 1 case was reported, February 4, at Barchoum El Koubra, Tukh district, making a total number since January 1, 1905, of 7 cases and 5 deaths. For this reason outgoing quarantine has been put in force in Egyptian ports.

CHOLERA—TURKEY.

For the week ended January 21, 1905, 40 cases of cholera, with 12 deaths, were reported in Turkey. Of these 34 cases and 7 deaths occurred at Van.

PLAGUE—ADEN.

During the week ended January 4, 1905, 247 cases of plague, with 223 deaths, were reported at Aden. The epidemic is visibly increasing.

RUSSIA—QUARANTINE REGULATIONS.

According to an official notification of the Russian plague commission, under date of January 24, 1905, the city of Merv, Transcaspien province, the port of Hassakuli, Caspian Sea, and the village of Tehikichliar were declared to be free from cholera. January 25 the

city of Saratow was declared to be free from cholera. By another official notification of the same commission, dated February 2, 1905, the Urlask territory was declared to be free from plague.

SPAIN—QUARANTINE REGULATIONS.

Under date of January 26, 1905, the port of Manila was declared, in Spain, to be infected with plague.

MALTA—QUARANTINE REGULATIONS.

Quarantine regulations against arrivals from Alexandria in Maltese ports were repealed by an order dated January 26, 1905.

BRITISH INDIA—QUARANTINE REGULATIONS.

By order dated January 13, 1905, plague quarantine regulations have been put in force at Orissa and Chittagong against arrivals from Hongkong.

DUTCH EAST INDIES—QUARANTINE REGULATIONS.

By regulations promulgated in the Dutch East Indies the ports of Boeloekoemba and Bonthain, Celebes, were declared to be free from cholera since January 6, 1905.

PLAGUE—BRITISH EAST AFRICA.

From January 5 to 12, 1905, there were reported at Port Florence 9 cases of plague with 8 deaths. Plague has appeared at Kisumu, a native village near Port Florence. Kisumu is the terminal station of the Uganda railroad. It is located on Lake Victoria and is the starting point for steamers sailing for German East Africa. Natives leaving Kisumu are detained in quarantine. Europeans are not subjected to any restrictions whatever.

GREAT BRITAIN—PLAGUE.

The steamship *Crewe Hall* arrived February 1, 1905, in the Mersey River from eastern ports and reported that a Lascar member of her crew was suffering from an apparently insignificant illness. The man died, however, before he was seen by the Liverpool port medical officer. When the body was inspected a bubo was found, and the corpse was taken ashore to the mortuary room, where a post-mortem examination was made and material was taken from the swelling. This material was sent to Professor Boyce, of Liverpool, for investigation, and as the results of the examination created a suspicion of plague, cultures were forwarded to Doctor Klein, who reported, February 5, that the case was one of plague. Pending the result of the bacteriological examination, the ship was disinfected and the Lascar "contacts" were temporarily isolated at the port hospital. There was no evidence of rat infection aboard the vessel.

The steamship *Crewe Hall* left Rangoon December 23, 1904, and touched at Colombo December 28, at Suez and Port Said January 13, and at Algiers January 22. The captain of the *Crewe Hall*, who did not notify the authorities of the case on arrival, was condemned to a fine of £10.

## MORTALITY—VIENNA AND TURIN.

AUSTRIA—*Vienna*.—Month of December, 1904: Estimated population, 1,816,303. Total number of deaths, 2,846, including enteric fever, 6; measles, 37; scarlatina, 7; diphtheria, 45; erysipelas, 9; and pulmonary tuberculosis, 447. Annual rate, 18.80 per mille.

ITALY—*Turin*.—Month of October, 1904: Estimated population, 352,060. Total number of deaths, 376, including enteric fever, 19; whooping cough, 5; and pulmonary tuberculosis, 41. Annual rate, 12.82 per mille.

## PLAGUE—RUSSIA.

In the Gurjew district, government of Urlask, during the period from the end of November, 1904 (the outbreak of the epidemic), to January 9, 1905, there were registered a total number of 340 deaths from plague. From January 10 to 16 there were 3 fatal cases.

## HYGIENIC EXHIBITION AT MILAN, 1906.

An international exhibit of hygiene will, by request of the Italian general health department, be added to the exhibition at Milan, 1906. Many countries will assist in the display, which will have for its object the presentation in a practical manner to the public of the advances made in the field of sanitation during recent years.

## PANAMA.

*Reports from Colon—Yellow fever—Disinfection of steamship Eddystone from Para—Mortuary statistics of Colon and Panama for the month of February, 1905—Inspection of vessels.*

Acting Assistant Surgeon Mohr reports, March 6, 8, and 10, as follows:

On March 6 a case of fever which had been under observation as suspicious in the Colon Hospital was officially declared to be yellow fever. The patient is a young American recently arrived on the Isthmus and probably contracted the disease in Panama.

During the month of February there have been 13 cases of yellow fever reported in the city of Panama. Of these cases 7 have died, 1 recovered, and 5 are still in the hospital. All those in hospital are doing well and will recover, and there have been no new cases and no suspects since the above report.

I have also to report that the British steamship *Eddystone*, thirteen days from Para, Brazil, via Limon, entered this port on February 26. This vessel had been refused entry at Limon, but the authorities of that port had taken up the foul bill of health from Para, which stated that 4 cases of plague existed there, and had issued a clean bill from Limon to Colon. The agent of the company here had, however, already advised the expected arrival of the vessel and requested her disinfection at this port. After a thorough examination of all on board, the entire vessel was disinfected as for plague, by the Isthmian quarantine service, and released after two days' detention.

*Mortuary statistics for the month of February, 1905.*

*Inspection of vessels.*

During the week ended March 4, 1905, the following vessels cleared for ports in the United States and were granted bills of health:

American schooner *A. H. Babcock* for Mobile, February 26, with 11 crew and 1 passenger.

British steamship *Beverly* for New Orleans, via Bocas del Toro, February 27, with 40 crew and 10 passengers.

British steamship *Barbadian* for New Orleans, March 1, with 45 crew and 16 passengers.

American steamship *Finance* for New York, March 1, with 63 crew and 45 passengers.

Italian steamship *Centro America* for Ponce, via South American ports, March 4, with 100 crew and 61 passengers.

On March 9, 1905, the board for the diagnosis of yellow fever cases reported another case in the hospital in Colon, where the patient had been under observation for three days. The patient, a young foreigner, was taken sick on March 5, having arrived at Colon from Panama on the same day.

The case which was reported in Colon on March 6 is now known not to have been in Panama for nine days previous to illness. The infection in this case was, therefore, presumably contracted on this side, but its source can not be traced.

The cases which have hitherto been reported as having originated on the Isthmus, but developing in foreign ports or en route to such ports, have been dropped from the official reports. The revised report now reads as follows: Cases on the Isthmus from July 1, 1904, to March 1, 1905, 40; deaths, 15.

*Statement of yellow-fever situation March 1 to 10, 1905.*

The following is received from the chief sanitary officer of the Isthmus:

There have been the following cases since March 1, 1905:

1. L. S., Scotchman, taken sick February 24; admitted to hospital (Ancon) March 4, 1905. Died March 8, 1905.

2. G. de J., Frenchman, taken sick March 4; admitted to hospital (Ancon) March 7, 1905. Died March 10, 1905.

3. B. G., American, taken sick March 4; admitted to hospital (Colon) March 4, 1905.

4. L. G., American, taken sick March 5; admitted to hospital (Colon) March 6, 1905.

5. V. J., Spaniard, taken sick March 5; admitted to hospital (Ancon) March 10, 1905.

## PERU.

*Report from Callao—Vaccination of emigrants for the Canal Zone.*

Assistant Surgeon Lloyd reports, February 12, as follows:

Four certificates of vaccination were issued by this office during the month of January.

TURKEY.

*Movement of the pilgrimage of the year 1905 at the camp at Tor.*

URUGUAY.

*Report from Montevideo—Smallpox.*

Consul Hopley reports, February 10, as follows:

Last week 2 or 3 cases of smallpox were discovered in the Ciudad hospital. This week there have been 19 cases at the asylum for the insane, 7 of which have proven fatal. There have been 12 other cases near the asylum. The laundry work of the Ciudad hospital is done at the asylum, and the probabilities are that the disease was introduced into that institution from the hospital linen. So far, the outbreak is confined to the asylum and that neighborhood, away from the center of the city and in a healthy locality where there is much open ground, so that the danger of its spreading is light.

WEST INDIES.

*Report from Barbados—Trachoma among steerage passengers from Sao Paulo—Vaccination of emigrants for the Canal Zone.*

Assistant Surgeon Ward reports, March 6, as follows:

I transmit herewith a copy of a letter I sent to Surg. G. W. Stoner, Ellis Island, New York, in care of Captain Mathison of the British steamship *Timoretto*, on whose vessel I discovered 2 cases of trachoma in steerage passengers from Sao Paulo. These persons were Italians and took passage on this steamship at Santos. At that port all persons

as they come aboard are examined by the ship's doctor, and as few rejections are made as possible. Most of the cases I see are in this class of passengers taken on at Santos. In this connection the paragraph on immigration to São Paulo, in the Public Health Reports, February 3, 1905, page 183, is very interesting. The number of these immigrants actually destined for the United States I am not in a position to say, yet they are among the most undesirable classes.

[Inclosure.]

BARBADOS, WEST INDIES, *March 5, 1905.*

SIR: I have the honor to report that there are 2 cases of trachoma aboard the British steamship *Tintoretto* from Santos and other Brazilian ports. These cases are in father and son, \* \* \* steerage passengers from São Paulo, taken on at Santos.

The father has an old case with several scars, while that of the boy is acute.

Respectfully,

WILLIAM K. WARD,  
*Assistant Surgeon,*

*United States Public Health and Marine-Hospital Service.*

Surg. G. W. STONER,  
*Ellis Island, New York.*

*Certificates of vaccination of emigrants for the Canal Zone.*

Date.	Vessel.	Number vaccinated.	Number recently successfully vaccinated.	Total for steamship.	Total for month.

FOREIGN AND INSULAR STATISTICAL REPORTS OF COUNTRIES AND CITIES—YEARLY AND MONTHLY.

ARGENTINA—*Buenos Ayres.*—Month of December, 1905. Estimated population, 979,235. Total number of deaths, 1,267, including diphtheria 7, enteric fever 13, measles 6, scarlet fever 1, smallpox 17, and 184 from tuberculosis.

AUSTRALIA—*Sydney.*—Month of January, 1905. Estimated population, 518,570. Total number of deaths, 464, including diphtheria 2, enteric fever 7, measles 3, scarlet fever 1, whooping cough 2, and 53 from tuberculosis.

AUSTRIA-HUNGARY—*Brünn.*—Month of January, 1905. Estimated population, 95,342. Total number of deaths, 316, including diphtheria 6, enteric fever 2, measles 12, scarlet fever 2, whooping cough 1, and 54 from tuberculosis.

BAHAMAS—*Dunmore Town.*—Two weeks ended March 3, 1905. Estimated population, 1,232. No deaths and no contagious diseases.

*Governors Harbor.*—Week ended March 4, 1905. Estimated population, 1,500. No deaths and no contagious diseases.

*Green Turtle Cay, Abaco.*—Two weeks ended March 3, 1905. Estimated population, 3,314. No deaths and no contagious diseases reported.

*Nassau.*—Two weeks ended March 4, 1905. Estimated population, 12,650. No deaths and no contagious diseases reported.

**BRAZIL**—*Pernambuco.*—Two weeks ended January 31, 1905. Estimated population, 200,000. Total number of deaths, 327, including enteric fever 3, measles 1, smallpox 123, and 53 from tuberculosis.

**CANADA**—*Ontario—Hamilton.*—Month of February, 1905. Estimated population, 57,600. Total number of deaths, 81, including diphtheria 3, enteric fever 1, whooping cough 1, and 5 from tuberculosis.

*Quebec—Sherbrooke.*—Month of February, 1905. Estimated population, 13,000. Total number of deaths 24. No contagious diseases reported.

**FRANCE**—*Roubaix.*—Month of February, 1905. Estimated population, 124,660. Total number of deaths, 191, including enteric fever 1, measles 3, scarlet fever 3, and 2 from whooping cough.

*St. Etienne.*—Two weeks ended February 15, 1905. Estimated population, 146,671. Total number of deaths, 172, including diphtheria 1, enteric fever 1, measles 3, and 25 from tuberculosis.

**GIBRALTAR.**—Two weeks ended February 26, 1905. Estimated population, 27,460. Total number of deaths, 21, including 3 from measles.

**GREAT BRITAIN**—*England and Wales.*—The deaths registered in 76 great towns in England and Wales during the week ended February 25, 1905, correspond to an annual rate of 15.7 per 1,000 of the aggregate population, which is estimated at 15,609,377.

*London.*—One thousand four hundred and thirty-six deaths were registered during the week, including measles 18, scarlet fever 10, diphtheria 13, whooping cough 34, enteric fever 2, and 13 from diarrhea. The deaths from all causes correspond to an annual rate of 16.0 per 1,000. In Greater London 1,956 deaths were registered. In the "outer ring" the deaths included 2 from diphtheria, 1 from measles, 1 from scarlet fever, 9 from whooping cough, and 1 from diarrhea.

*Ireland.*—The average annual death rate represented by the deaths registered during the week ended February 25, 1905, in the 21 principal town districts of Ireland was 24.8 per 1,000 of the population, which is estimated at 1,093,959. The lowest rate was recorded in Sligo, viz, 4.8, and the highest in Clonmel, viz, 76.9, per 1,000. In Dublin and suburbs 194 deaths were registered, including measles 3, whooping cough 1, and 49 from tuberculosis.

*Scotland.*—The deaths registered in 8 principal towns during the week ended February 25, 1905, correspond to an annual rate of 18.3 per 1,000 of the population, which is estimated at 1,749,917. The lowest

rate of mortality was recorded in Paisley, viz, 13.4, and the highest in Perth, viz, 25.9, per 1,000. The aggregate number of deaths registered from all causes was 615, including diphtheria 6, measles 7, scarlet fever 2, and 27 from whooping cough.

ITALY—*Milan*.—Month of December, 1904. Estimated population, 529,127. Total number of deaths, 893, including diphtheria 13, enteric fever 8, measles 3, scarlet fever 1, and 93 from tuberculosis.

ST. HELENA.—Four weeks ended February 11, 1905. Estimated population, 3,342. Total number of deaths, 6, including enteric fever 1 and 1 from tuberculosis.

WEST INDIES—*Curaçao*.—Two weeks ended March 3, 1905. Estimated population, 31,600. Total number of deaths, 10. No contagious diseases reported.

*St. Thomas*.—Two weeks ended February 17, 1905. Estimated population, 12,019. Total number of deaths, 13, including 1 from tuberculosis.

*Cholera, yellow fever, plague, and smallpox, December 31, 1904, to March 24, 1905.*

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from American Consuls through the Department of State, and from other sources.]

[For reports received from June 25 to December 30, 1904, see PUBLIC HEALTH REPORTS for December 30, 1904.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]
