

PUBLIC HEALTH REPORTS.

UNITED STATES.

Special Notice.

An addressed penalty postal card (requiring no stamp) for return to the Surgeon-General will be inclosed with the first number of the PUBLIC HEALTH REPORTS in the months of April and October. You are requested to sign and mail this card as soon as possible after receipt. Failure to do so will be taken by the Bureau as an indication that you no longer desire to receive the PUBLIC HEALTH REPORTS.

Third annual conference of State and Territorial health officers with the United States Public Health and Marine-Hospital Service.

The following notice was sent to the board of health of each State and Territory and of the District of Columbia:

TREASURY DEPARTMENT,
Washington, March 31, 1905.

DEAR SIR: In accordance with the provisions of section 7 of an act approved July 1, 1902, to increase the efficiency and change the name of the United States Marine-Hospital Service, I have to inform you that the third annual conference of State boards of health with the Public Health and Marine-Hospital Service will be held at the New Willard Hotel, Washington, D. C., on Monday, May 15, 1905, at 10 a. m.

Your board will be entitled to representation in the said conference by one delegate.

It is requested that your board will submit a typewritten report of any State or municipal health legislation enacted during the past year which is of interest to the public health, and any other information of the occurrences of the past year in relation to public health, sanitation, or kindred subjects. This report will be for publication in the transactions and will not be read at the meeting.

It is proposed that the following subjects shall be discussed at this meeting:

1. The national control of leprosy.
2. The methods of the transmission of typhoid fever.

I would request that I be informed in advance of the name of the delegate who will represent your board.

Respectfully,

WALTER WYMAN,
Surgeon-General.

[Reports to the Surgeon-General, Public Health and Marine-Hospital Service.]

Smallpox in Cairo, Ill.

Surgeon Guitéras reports, March 28, as follows:

Seven cases of smallpox are confined in city isolation hospital at the present time.

STATISTICAL REPORTS OF STATES AND CITIES OF THE UNITED STATES,
YEARLY AND MONTHLY.

CALIFORNIA.—Reports to the State Board of Health from 25 localities, having an aggregate population of 901,050, show a mortality of 1,178, including diphtheria 12, enteric fever 13, measles 1, whooping cough 3, and 210 from tuberculosis.

San Francisco.—Month of February, 1905. Estimated population, 475,000. Total number of deaths 600, including diphtheria 8, enteric fever 5, whooping cough 3, and 101 from tuberculosis.

MASSACHUSETTS—*Worcester*.—Month of February, 1905. Estimated population, 128,286. Total number of deaths 193, including scarlet fever 1, whooping cough 3, and 28 from tuberculosis.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended March 11, 1905, from 70 observers, indicate that scarlet fever, enteric fever, smallpox, diphtheria, and cholera morbus were more than usually prevalent, and pneumonia, erysipelas, measles, dysentery, meningitis, remittent fever, puerperal fever, and inflammation of brain were less than usually prevalent.

Meningitis was reported present at 6, whooping cough at 8, diphtheria at 30, measles at 36, enteric fever at 47, smallpox at 49, scarlet fever at 63, pneumonia at 68, and phthisis pulmonalis at 190 places.

UTAH.—Month of January, 1905. Reports of contagious and infectious diseases to the State board of health for the month of January, received from 88 local health officers in 23 counties, 30 of whom reported their communities free from all contagious and infectious diseases, are as follows:

Scarlet fever, present in 13 localities, with 50 cases, 2 deaths; smallpox, 16 localities, with 97 cases, no deaths; diphtheria, 16 localities, with 81 cases, 6 deaths; enteric fever, 13 localities, with 35^a cases, 3 deaths; whooping cough, 9 localities, with 19^a cases, no deaths; measles, 14 localities, with 304^a cases, 2 deaths; chicken pox, 1 locality, with 12^a cases, no deaths; pneumonia, 34 localities, with 165^a cases, 53 deaths; tuberculosis, 6 localities, with 7^a cases, 4 deaths; total, 770 cases, 70 deaths.

Incomplete returns of mortality from 17 counties, with 24 cities, 9 incorporated towns, and 32 villages, having an estimated population of 154,970 reporting, show a total of 235 deaths from all causes, representing a death rate of 15.25 per thousand.

Diphtheria and scarlet fever show a decided increase.

Month of February, 1905.—Scarlet fever present in 12 localities, with 92 cases, 1 death; smallpox, 20 localities, with 204 cases, 1 death; diphtheria, 12 localities, with 56 cases, 3 deaths; enteric fever, 10

^a Report of cases incomplete.

localities, with 19 cases,^a 2 deaths; whooping cough, 15 localities, with 93 cases,^a no deaths; measles, 15 localities, with 700 cases,^a 3 deaths; chicken pox, 2 localities, with 12 cases,^a no deaths; pneumonia, 37 localities, with 138 cases,^a 37 deaths; tuberculosis, 5 localities, with 10 cases, 5 deaths. Total, 1,324 cases and 52 deaths.

Incomplete returns of mortality from 15 counties, with 17 cities, 4 incorporated towns, and 26 villages, having an estimated population of 136,755 reporting, show a total of 176 deaths from all causes, representing a death rate of 12.94 per 1,000.

Reports from Cape Colony—Plague—Examination for plague-infected rodents—Infectious diseases.

COLONIAL SECRETARY'S OFFICE,
Cape Town, Cape of Good Hope, February 27, 1905.

The following report by the medical officer of health for the colony on the occurrence of bubonic plague in the Cape Colony for the week ended February 25, 1905, is published for general information.

NOEL JANISCH,
Under Colonial Secretary.

Port Elizabeth.—No case of plague was discovered during the week. At the plague hospital no cases were under treatment. Two hundred and seventy-seven rats (8 found dead) and 506 mice (7 found dead) were bacteriologically examined during the week, of which 2 rats and 1 mouse proved to be plague infected.

East London.—One case of plague, a native male (found dead), was discovered during the week. At the plague hospital no cases were under treatment. Two hundred and seventeen rats (126 found dead) and 31 mice (11 found dead) were bacteriologically examined during the week, of which 70 rats and 3 mice proved to be plague infected.

Other districts of the colony.—No plague infection was discovered either in man or animals. Four hundred and eleven rodents were examined during the week from the Cape Town Harbor board area and the shipping in the harbor and 597 were examined by the medical officer of health for the city from the Cape Town municipal area.

A. JOHN GREGORY,
Medical Officer of Health for the Colony.

Return of cases of infectious disease in the Cape division during the week ended February 25, 1905.

AUSTRALIA.

Reports from Brisbane—Plague bulletins—Plague in Queensland and New South Wales.

Consul-General Bray, at Melbourne, forwards the following:

DEPARTMENT OF PUBLIC HEALTH, QUEENSLAND,
Brisbane, February 18, 1905.

Plague bulletin No. 7, for week ended 12 o'clock noon, Saturday, February 18, 1905:

PLAGUE IN MAN.

The following 5 cases of plague occurred in Brisbane during the above-mentioned period:

February 13.—A man, aged 27 years, following the calling of a butcher at Paddington, where he also resided. At his residence 1 rat and 3 mice were found, but they were not plague-infected. A rat and

a mouse, too decomposed for examination, were also found at the patient's shop.

February 14.—A schoolboy, aged 8 years, residing with his parents at Toowong. This patient frequently visited a produce store situated in Roma street, city. One rat, not infected, was found at the boy's home.

February 15.—A man, aged 21 years, an employee in a firm carrying on business in Roma street, and a resident of Toowong. No rats were found at the patient's residence. On the 8th instant 142 rats and mice were found in the block of buildings where the patient worked. Many of them were too decomposed for examination.

February 16.—A girl, aged 19 years, residing at Logan road, South Brisbane.

February 16.—A married woman, 40 years of age, residing at Wickham Terrace, city.

Rat gangs are at present engaged on the premises of the residences of the last two patients.

SUMMARY.

Number of cases declared to date	16
Cases declared during week	5
Cases discharged	0
Remaining under treatment.....	11
Deaths during the week	0

Last case February 16, 1905.

PLAGUE IN RATS.

	Rats.	Mice.	Total.
Total number destroyed during period mentioned	781	274	1,055
Total number examined at Bacteriological Institute	432	171	603
Total number found infected	15	0	15

Date of last infected rat, February 17, 1905.

LOCATION OF PLAGUE-INFECTED RATS.

February 11, grocer's store, Wickham street, valley, 1; hotel, Queen street, city,^a 1; tobacconist's premises, George street, 1. February 13, implement store, Boundary street, 1. February 14, hotel, Queen street,^a 1; Botanic Garden's stables, 1; chemist's premises, George street, 1. February 15, hotel, Petrie's Bight, 1; printer's establishment, Roma street, 1. February 16, tailor and clothier's premises, Queen street, 1; hotel, George street,^a 1; jeweler's premises, Adelaide street, 1; business premises, Eagle lane, 1; February 17, hotel, George street^a 1.

B. BURNETT HAM, *Commissioner of Public Health.*

DEPARTMENT OF PUBLIC HEALTH, NEW SOUTH WALES.

Plague, Clarence and Richmond Rivers.

Bulletin No. 4, for week ended at 1 p. m. on Saturday, February 11, 1905:

PLAGUE IN MAN.

Remaining under treatment February 4, 1905, 3; notified during week, 1; discharged during week, none; died during week, none. On Friday, the 10th instant, a suspicious case of illness was reported from

^a Same premises.

Ballina, on the Richmond River, a town distant about 60 miles from Ulmarra. The case was visited by the assistant medical officer of the Government in charge of the outbreak on the Clarence on Saturday, and reported to be plague. The patient has been isolated and all precautions have been taken to prevent spread of infection. A sanitary inspector and gang of ratcatchers have been dispatched to Ballina; the municipality has been declared infected, and steps have been taken to prevent export of infected merchandise therefrom.

PLAGUE IN RATS.

Infected rats have been found at 3 premises on the Clarence River since the 4th instant.

By order:

G. H. KING, *Secretary.*

Report from Newcastle—Plague.

The following is received from the Department of State, under date of March 28:

A telegram of the 27th instant has been received from the consul at Newcastle, Australia, reporting the presence of plague at that port.

AUSTRIA-HUNGARY.

Reports from Fiume—Inspection of emigrants.

Consular Agent La Guardia reports, March 3 and 17, as follows: Steamship *Slavonia* sailed March 2 for New York; inspected and passed 1,871 steerage passengers, rejected at final inspection, 7; inspected and labeled 2,300 small and 28 large pieces of baggage, disinfected 8 pieces, containing used feathers and bedding.

March 17.—Steamship *Pannonia*, sailed March 16 for New York; inspected and passed 1,754 steerage passengers; rejected at final inspection, 32; inspected and labeled 2,000 pieces small and 30 pieces large baggage; disinfected, 10 pieces.

Report from Trieste—Inspection of emigrants.

Consul Hossfeld reports, March 14, as follows:

The Cunard steamship *Pannonia* left this port on March 13, bound for New York, viâ Fiume and Palermo.

The number of steerage passengers embarked was 202; at the final inspection 7 were rejected. The baggage of all the emigrants, consisting of 221 pieces, was disinfected.

CHINA.

Reports from Shanghai—Inspection of vessels—Mortality—Smallpox.

Acting Assistant Surgeon Ransom reports, March 7, as follows:

During the week ended February 18, 1905, there were inspected 3 vessels, 138 crew, and 1 steerage passenger. To passengers and crew destined to American ports, 88 certificates of vaccination were issued. Manifests were viséed for 7,364 pieces of freight, and the effects of 5

sailors (3 pieces of baggage) were disinfected. There were no immigration examinations made, and no quarantinable diseases were reported from outports.

There were reported to the municipal health officer during the week among foreigners, smallpox, 3 new cases; tuberculosis, 1 new case; and among natives, smallpox, 13 deaths; diphtheria, 1 death, and tuberculosis, 36 deaths. The total reported mortality was 4 foreigners and 161 natives, a considerable increase over the previous week.

During the week ended March 4, 1905, 2 supplemental bills and 1 original bill of health were issued, and there were inspected 3 vessels, 310 crew, 4 cabin and 92 steerage passengers. Manifests were viséed for 2,343 pieces of freight. There were disinfected the effects of 8 sailors, shipped here from San Francisco (8 pieces), and 29 vaccination certificates were issued to those bound direct to American ports. One immigrant, per steamship *Minnesota*, to Manila, was examined and passed. Three cases of illness, which proved to be nonquarantinable, were investigated.

The weekly report of the municipal health officer shows among foreigners 1 new case of diphtheria; among natives, 5 deaths from smallpox, 5 deaths from diphtheria, and 25 deaths from tuberculosis. The total mortality is reported to have been 4 foreigners and 143 natives. No new cases of small-pox among foreigners appear to have been reported, although, to my personal knowledge, there were 2 cases, both of the hemorrhagic type, and there were doubtless others.

There were no quarantinable diseases reported from outports.

CUBA.

Report from Habana—Inspection of vessels.

Surgeon Wertenbaker reports, March 27, as follows:

Week ended March 25, 1905—

Vessels inspected and bills of health issued	25
Crew of outgoing vessels inspected.....	2,857
Passengers of outgoing vessels inspected	1,167
Pieces of freight passed (salted hides)	566

No quarantinable diseases have been reported in the city or in the island during the week.

Mortality in Habana during the ten days ended March 20, 1905.

Disease.	Number of deaths.
Cancer.....	6
Diphtheria.....	1
Enteritis, under 2 years.....	49
Scarlet fever.....	1
Tuberculosis.....	28

^a Previous period of ten days, eight deaths.

Total number of deaths from all causes, 132.

Report from Matanzas—Inspection of vessels—Precautionary detention of steamship Yorugu from Veracruz—Mortuary statistics.

Acting Assistant Surgeon Nuñez reports, March 27, as follows:

During the week ended March 25, 1905, bills of health were granted to 9 vessels bound for United States ports in good sanitary condition.

The British steamship *Yoruga*, originally from Veracruz via Cardenas, was held in precautionary quarantine for 6 days while taking on a cargo of sugar. She left March 23, for New York direct, without any sickness on board.

There have been officially reported in the city during the past week 1 case of diphtheria and 40 new cases of measles, with 1 death.

The accompanying mortuary statistics for the second 10 days in March show an increase of 6 deaths over the 10 days preceding:

Cause of death.	Number.	Bertillon number.
Hemorrhage, cerebral	5	64
Tuberculosis, pulmonary	8	27
Enteritis, infantile	2	115
Septicæmia, puerperal	1	137
Arterio-sclerosis	1	81
Gastro-enteritis	1	106
Tetanus, traumatic	1	72
Bronchitis, capillary	1	90
Nephritis, acute	2	119
Measles	1	6
Congestion, pulmonary	1	95
Septicæmia	1	20
Premature birth	1	151
Debility, senile	1	154
Lesion, cardiac (unqualified)	1	79
Burns	2	167
Total	30

Annual rate of mortality per mille, 22.81; estimated population, 48,000.

No quarantinable disease has been reported either in the city or within this district.

Report from Nuevitas—Inspection of vessels.

Acting Assistant Surgeon McConnell reports, March 26, as follows:

During the week ended March 25, 1905, one bill of health was issued to the Cuban steamer *Olinda*, bound for New York; 44 crew and 17 passengers inspected.

No quarantinable disease has been reported in this district during the week.

GERMANY.

Report from Berlin—Plague in various countries.

Consul-General Mason reports, March 17, as follows:

Plague.

Egypt.—During the period from February 25 to March 4, 1 fatal case of plague occurred in the Suez district.

British India.—In Rangoon (Burma), during the period from February 6 to 13, there were registered 10 cases of plague (with 8 deaths.)

Japan.—During the month of December last, there were registered in Formosa 197 plague cases (and 183 deaths), of which 34 cases (31 deaths) occurred in the administrative district of Schinchiku, the rest in the district of Taipeh.

British East Africa.—Up to February 11, according to a report from Mombassa, there had been registered 25 fatal cases of plague.

Death rate of Berlin and other cities.

The death rate of Berlin for the week ended February 18 was considerably lower than that of the foregoing week, amounting, calculated on the year, to 16.8 per thousand of the population, this being, however, higher than the rate for the same week of last year, in which it amounted to only 14.8 per thousand. Two-thirds of the large towns and cities of Germany showed less favorable figures than Berlin, the following places having a considerably higher death rate than this city, namely: Stuttgart, Nuremberg, Karlsruhe, Cologne, Hanover, Magdeburg, Rixdorf (with 18.1), Danzig, Königsberg, Breslau, Halle, Dresden, as well as Paris and Vienna. The mortality rate of Munich, Bremen, Frankfort-on-the-Main, and London corresponded almost exactly with the Berlin figure, while the following cities had a lower death rate than Berlin, namely: Brunswick, Leipzig, Charlottenburg (with 14.8), and Schöneberg (with 12.3). The mortality rate among infants, amounting to 3.6 per year and thousand, was lower than the Hamburg and Munich figure. There were registered 122 deaths from phthisis pulmonalis; 90 deaths from acute diseases of the respiratory organs (including 14 deaths from influenza); 42 deaths from cancer; 10 deaths from measles; 9 deaths from scarlet fever; 7 deaths from diphtheria; finally, 2 persons died by violence.

INDIA.

Reports from Bombay—Transactions of Service—Cholera, plague, and smallpox.

Acting Assistant Surgeon Hume reports, March 11, as follows:

Transactions of the Service for the two weeks ended March 11, 1905.

Sanitary Certificate No. 79 (accompanying consular invoice No. 44 of 1905) was issued on March 1, 1905, for 96 casks of goatskins shipped to New York. The skins had been soaked in brine solution and were packed in watertight casks.

Sanitary Certificate No. 80 (accompanying consular invoice No. 45 of 1905) was issued on March 1, 1905, for 10 bales of goatskins for New York. The skins had been prepared by thorough washing, rubbing with arsenic powder, and then by drying in the sun.

Bill of health No. 24 was issued on March 9, 1905, for the steamship *Tonawanda*, which sailed on that day for Philadelphia, via Suez Canal, with a cargo of manganese ore. The vessel came to Bombay with bulk oil and the hold was therefore in excellent sanitary condition. All usual precautions were taken while the vessel was in dock; rat guards were on the lines, rat traps on deck, forecabin was disinfected, crew individually examined for fever and enlarged glands.

The mortality record of Bombay City for the past two weeks has been progressively bad. Plague is reaching a higher level than last year at this time, while smallpox abounds. Owing to the death of 5 Europeans from smallpox during the past week, there has been a great increase in the number of Europeans attending the vaccination stations. Several prominent individuals were among those who died thus, and it has become known that we are living in the midst of a real epidemic. The great danger lies in the fact that the native does not fear the disease and exposes others quite unconcernedly.

The mortality figures for Bombay city are as follows:

	Week ended—		Average of same weeks 1900-1904.	Week ended—		Average of same weeks 1900-1904.
	Feb. 28, 1905.	Mar. 1, 1904.		Mar. 7, 1905.	Mar. 8, 1904.	
Plague deaths	769	832	974	860	968	1,016
Plague mortality	51.53	55.75	65.26	57.62	64.86	68.08
Smallpox deaths	148	14	71	186	19	78
Cholera deaths	0	0	4	0	1	5
Total deaths	1,726	1,420	2,073	1,812	1,574	2,103
Total mortality	115.65	95.15	137.29	121.42	105.77	139.27

Progress of plague.

Plague in the Bombay Presidency, June, 1904, to January, 1905.

	Attacks.	Deaths.
June 1 to November 30, 1904.....	181,376	132,179
December, 1904.....	28,251	21,684
January, 1905.....	19,624	14,814
Total for 8 months.....	229,251	168,677
Total, 1896 to May, 1904.....	1,552,142	1,175,645
Total since outbreak of plague	1,781,393	1,344,322

Below are given figures showing the progress of plague in certain districts and towns of the Presidency:

Deaths from plague, districts of Bombay Presidency, 1904-5.

	District.	November.	December.	January.
1	Ahmedabad	109	41	106
2	Kaira	406	271	236
3	Surat	473	374	285
4	Khandesh	966	886	996
5	Nasik	2,404	1,396	744
6	Poona	494	440	312
7	Satara	6,774	4,381	1,722
8	Sholapur	773	546	635
9	Ahmednagar	1,204	780	777
10	Belgaum	2,686	1,613	775
11	Dharwar	3,471	1,672	1,136
12	Bijapur	4,095	2,661	1,239
13	Kolhapur	3,852	2,955	2,232
14	Kathiawar	400	160	135
15	Baroda	709	548	416
16	Satara Agency	587	221	100

It will be observed that through January there is on the whole a definite decrease in plague deaths. In a few of the districts there was practically a stationary figure in December and January, while in two districts there is a slight increase.

For Bombay City the record is not so good, while in Karachi and Aden there is also a rise.

The figures for the chief towns are as follows:

Deaths from plague, 1904-5.

	November.	December.	January.
Bombay City	285	411	1,076
Karachi City	44	169	233
Poona City	1,338	1,448	744
Aden	25	146	422

Below are given the figures for Bombay City, Bombay Presidency, and all India, week by week since January 1, 1905.

Deaths from plague—weekly record since January, 1905.

Week of—	Bombay City.	Bombay Presidency.	All India.
January 7	115	3,310	24,385
January 14	192	3,137	25,719
January 21	261	3,256	28,104
January 28	386	3,669	33,087
February 4	395	3,596	36,117
February 11	511	3,316	33,660
February 18	618	3,190	27,837
February 25	735	3,193	29,465

It will thus be seen at a glance that the curve for Bombay City is totally different from that of the Presidency as a whole or of all India.

In the other towns of the Presidency plague is somewhat on the decline during February and March, while in the city itself, there will be a steady rise through April, judging from past experiences.

Report from Calcutta—Inspection of vessel—Cholera and plague mortality—Relation between epizootic and epidemic plague.

Acting Assistant Surgeon Eakins reports, March 9, as follows:

During the week ended March 4, 1905, bill of health was issued to the steamship *Reichenfels* bound to Boston and New York with a total crew of 55. The usual precautions were taken, holds fumigated, rat guards placed on wharf lines, and Lascars effects were disinfected.

During the week ended March 4, 1905, there were 39 deaths from cholera and 213 deaths from plague in Calcutta.

In Bengal during the week ended February 25, 1905, there were 5,661 cases and 5,044 deaths from plague.

Relation between epizootic and epidemic plague.

In India during the week ended February 25, 1905, there were 34,154 cases and 29,465 deaths from plague.

The results of Doctor Hunter's recent researches into the relationship between epizootic and epidemic plague in Hongkong tend strongly to confirm Captain Liston's theory, a résumé of which I had the honor of forwarding December 16, 1904 (see Public Health Reports, January 13, 1905, page 55), that plague is essentially a rat disease; nor do they materially conflict with his further idea that the rat flea is largely responsible for the communication of the disease between rat and man. Doctor Hunter appears to believe, upon what seems to be inadequate evidence, that the alimentary canal is the point of infection, while

Doctor Klein, also of the Hongkong government board, leans strongly toward the skin. This idea is obviously a substantiation of a part of Captain Liston's flea theory. Doctor Hunter's charts show definitely that the curve of human follows that of rat plague with great regularity, both in its rise and fall, with an interval of about a fortnight. There is a difference, however, in that the rat plague seems to be continuously epizootic, as after each epidemic has fallen to its lowest it again rises to a fairly constant level, where it continues until the next epidemic period. This is followed promptly by the human epidemic, which in the interval, since the last, has been essentially quiescent.

Doctor Hunter's point is that human plague is recurrently epidemic, the recurrences synchronizing closely with the exacerbations of the rat epizootic. It may even be that plague, when it ceases to be epizootic, continues as enzootic among rats and other muridæ. Doctor Hunter even goes so far as apparently to believe that upon the repeated passage of the bacillus through the rat it becomes more or less nonvirulent and causes a chronic type of plague in the rat, which idea seems hardly tenable. He, at the same time, considers the periodical recrudescence of acute rat plague to be caused by an infection of fresh generations of rats which are very susceptible. This view is entirely in accord with Captain Liston's experience that plague is most prevalent in rats during their breeding season.

Whatever disagreement there may be between theories of how plague is communicated from rat to man, the fact is almost universally admitted. Such being the case, it is obviously advisable, or, better, absolutely imperative that there should be a systematic and wholesale rat destruction in infected or threatened area. It seems to be almost a perverted judgment to permit the "scruples" or "prejudices" of any community to stand in the way of taking the life of a rat, considering the magnitude of the stake. So far as India is concerned, perhaps the most forcible argument against rat destruction is that even were all the rats destroyed plague would continue to exist because of the filthy sanitary, or absolute lack of sanitary, habits of living. However, that remains to be proved.

JAPAN.

Report from Yokohama—Emigrants recommended for rejection.

Passed Assistant Surgeon Moore reports, March 14, as follows:

Number of emigrants for steamship *Kanagawa Maru*, for Seattle, recommended, March 11, for rejection, 14.

One emigrant per steamship *Doric* for San Francisco, recommended March 14, for rejection.

Report from Kobe—Emigrants recommended for rejection.

Acting Assistant Surgeon Fowler reports, March 2, as follows:

Number of emigrants recommended during month of February, 1905, for rejection: Per steamships *Siberia*, for San Francisco, February 1, 2; *Iyo Maru*, for Seattle, February 7, 1; *Magnolia*, for Honolulu, February 14, 10; for San Francisco, 2; *Manchuria*, for Manila, February 21, 14; *Minnesota*, for Manila, February 24, 4; *China*, for Honolulu, February 25, 8.

MEXICO.

Report from Tampico—Sanitary conditions—Mosquitoes in water containers.

Acting Assistant Surgeon Frick reports, March 30, as follows:

The present sanitary condition of Tampico is anything but good. I have found mosquito larvæ in the gutters and pools in the streets, in old discarded cans found in open premises, and in water barrels found in the municipal plaza. I noticed many water containers, barrels, jugs, demijohns, etc. A very few had wooden covers, probably to keep the dust out. Even these wooden covers were exceptions. At present the stegomyia is in a minority. There are many culex, sufficient anopheles, and the stegomyia is rapidly increasing.

PANAMA.

Reports from Colon—Inspection of vessels—Disinfection of vessel on account of tuberculosis—Mortality—Insufficient water supply—Yellow fever.

Acting Assistant Surgeon Mohr reports, March 20, 21, and 22, as follows:

During the week ended March 18, 1905, the following vessels cleared for ports in the United States and were granted bills of health:

Spanish steamship *Montserrat*, for Ponce, via South American ports, March 12, with 112 crew and 61 passengers. Norwegian steamship *Preston*, for New Orleans, via Limon, March 15, with 31 crew and 2 passengers. American steamship *Allianca*, for New York, March 16, with 66 crew and 54 passengers. American schooner *Sarah D. Fell*, for Philadelphia, via Cartagena, Colombia, March 17, with 10 crew and no passengers. British steamship *Wanderer*, for New Orleans, via Mexican ports, March 16, with 39 crew and 1 passenger.

Remarks on all bills of health as follows:

One case of yellow fever reported in Colon on March 6, and 1 case on March 9; both in hospital.

Yellow fever reported in Panama since March 1, 1905: 6 cases and 3 deaths.

The master of the American schooner *Sarah D. Fell*, left the vessel here and returned to the United States suffering with pulmonary tuberculosis. Upon the arrival of the new master, and at his request, the living quarters of the vessel were disinfected for tuberculosis by the quarantine officer of this port.

During the week ended March 21, 1905, 11 deaths were officially reported from the following causes: Dysentery, 2; tetanus, 1; phthisis pulmonalis, 2; bronchitis, 1; disease of liver, 1; diarrhea, 2; lumbricoides, 1; dropsy, 1.

No cases of quarantinable diseases have been reported in Colon during the week. The 2 cases of yellow fever previously reported have recovered.

Bowel troubles have been prevailing to some extent, and a number of cases of dysentery have presented themselves at the hospital for treatment. These troubles are undoubtedly due to the bad water supply. The season has been exceptionally dry, and good drinking water is becoming scarce. While the majority of the foreigners here can obtain good water, the working and poorer classes are compelled to buy their water from the Panama Railroad, the source of the supply

being the Monkey Hill reservoir. The water is of poor quality, and sold at the rate of one-half cent a gallon. In the morning and evening, during the hours of delivery, the water stations are surrounded by people clamoring for water.

No cases of yellow fever have been reported in Panama since case No. 8, which appeared in my report of March 15, 1905.

MARCH 22, 1905.

One new case of yellow fever was reported to-day at the Colon Hospital. The patient, an American, age 18, was admitted to the hospital on March 17, since which time he has been under observation and isolated. This same patient had been discharged from the hospital on the 9th instant after recovering from a typical attack of malarial fever. From the time of his first admission to the hospital to the 17th he had not been out of the city of Colon, having lived, in the meanwhile, in two different second-rate lodging houses.

There appears to be no connection between this case and the case which was reported as having originated here on March 4 (case No. 3, official report for March). As neither of these cases can be traced to Panama it must be definitely concluded that the infection exists in this city.

PHILIPPINE ISLANDS.

Report from Manila—Plague—Inspection, disinfection, and fumigation of vessels.

Chief Quarantine Officer Heiser reports, February 23, as follows:

During the week ended February 18, 1905, the quarantinable diseases reported for the city of Manila were as follows: Plague, 2 cases and 1 death.

During the week the following vessels cleared for the United States:

On February 15, 1905, the U. S. army transport *Thomas*, for San Francisco, via Nagasaki and Honolulu, with 174 crew, 135 cabin and 664 steerage passengers. Crew and steerage passengers were bathed and their baggage and effects disinfected; cargo was inspected before loading; portions not passed were disinfected. Vessel partially disinfected at Mariveles. All persons on board inspected on board at hour of sailing.

On February 15, 1905, the British steamer *Massapequa*, for Boston and New York, via Cebu. Vessel was fumigated throughout. Final inspection of personnel will be made at Cebu.

PORTO RICO.

Report from San Juan—Transactions of Service—Vital statistics.

Chief Quarantine Officer King reports, March 27, as follows:

Transactions of the service at San Juan and the six subports during the month of January, 1905.

Vessels inspected.....	25
Vessels detained in quarantine.....	4
Persons detained in quarantine.....	11
Bills of health issued.....	30

The vessels detained were the Red D Line steamships *Philadelphia* and *Caracas*, which arrived on January 11 and 25, respectively, from ports

of Venezuela and Curaçao; the German steamer *Markomannia*, from Curaçao via Arecibo, on January 5, and the Spanish mail steamer *Buenos Aires*, from Central and South American ports on January 21, 1905. They were permitted to transact business under guard, as usual. The passengers were detained for observation purposes only. The health of this port is good and there were no quarantinable diseases reported during the month of January, 1905.

The transactions at the subports were as follows: Seven vessels inspected and 12 bills of health issued at Mayaguez; 3 vessels inspected and 5 bills issued at Arecibo; 5 vessels inspected and 2 bills issued at Fajardo; 1 vessel inspected and 1 bill of health issued at Humacao; 3 vessels inspected and 5 bills issued at Aguadilla, and no transactions at Arroyo.

The vital statistics of the subports show 106 deaths at Mayaguez during the month, 12 of which were due to uncinariasis, 8 to anæmia, 15 to tuberculosis, 8 to pneumonia, and 3 to chronic dysentery; 89 deaths at Arecibo, 5 due to uncinariasis, 10 to anæmia, 10 to enteritis, acute, 5 to tuberculosis, 7 to malarial fever, 12 to bronchitis, 4 to broncho-pneumonia, and 2 to cerebral meningitis; 37 deaths at Aguadilla, 7 due to uncinariasis, 5 to tuberculosis, 3 to paludism, 1 to measles, and 1 to pneumonia; 47 deaths at Humacao, 13 due to anæmia, 4 to broncho-pneumonia, 1 to pernicious malarial fever, 3 to paludism, and 5 to tuberculosis; 45 deaths at Fajardo, 6 due to anæmia, 1 to diphtheria, 5 to tuberculosis, 3 to pneumonia, 2 to broncho-pneumonia, and 2 to malaria; 15 deaths at Arroyo, 1 due to tuberculosis and 1 to bronchitis.

Vital statistics of San Juan, P. R., for the month of January, 1905.

Anæmia	9	Encephalitis, chronic	1
Tuberculosis	12	Bronchitis	2
Gastro-enteritis	11	Internal hemorrhage	1
Enterocolitis	2	Infantile tetanus	1
Cancer	2	Septicæmia	1
Enteritis	3	Hepatitis, chronic	2
Paludism	2	Other causes	34
Myelitis, chronic	1		
Typho-malarial fever	1	Total deaths	88
Broncho-pneumonia	1		
Meningitis	1	Births	84

TURKEY.

Report from Trebizond—Cholera epidemic at Van extinct.

Consul Sullivan reports, March 3, as follows:

The outbreak of cholera at Van and adjacent territory has passed, and for the last 2 weeks no fresh cases have been reported. The quarantine that had been enforced is removed and no further hindrance exists to the transit of goods or passengers.

Movement of the pilgrimage of the Hedjaz at the quarantine camp at Tor.

[From the Bulletin Quarantenaire, Alexandria, March 9, 1905.]

March 5.—British vessel *Minich* from Djeddah, with 1,157 pilgrims, according to the bill, and 1,226 according to the number stated at the camp. Three deaths from ordinary diseases occurred during the voyage. The destination of the vessel was Constantinople.

Russian vessel *Tzaritza* from Djeddah, with 1,068 Russian pilgrims, according to the bill, and 1,183 as stated at the camp. No death en route. Destination of the vessel, Theodosia.

March 6.—Ottoman vessel *Bassorah* from Djeddah, with 957 Turkish pilgrims (more than 24 sailors of the war marine), according to bill; 3 deaths of ordinary diseases en route. Destination, Constantinople.

March 9.—Ottoman vessel *Konia* from Djeddah, destined to Smyrna and Constantinople, with 865 pilgrims, Ottoman, according to bill; 3 deaths en route.

WEST INDIES.

Report from Barbados—Sickness on steamship Tennyson from Brazilian ports—Trachoma among steerage passengers.

Assistant Surgeon Ward reports, March 18, as follows:

On the evening of the 16th instant the British steamship *Tennyson* arrived at this port with a cargo of coffee, and passengers, from Santos, via Rio de Janeiro, Bahia, and Pernambuco. This vessel was boarded by the health officer, but as usual none of the crew were examined, and as the captain in good faith had said that all were well, the 9 passengers for Barbados were landed to be kept under observation to complete the fourteen days from their port of departure, and the vessel was kept in quarantine because she had not been fourteen days from the last infected port. About an hour later I boarded the *Tennyson* to examine the steerage and crew. While inspecting the latter I was told that the fourth engineer was in his bunk, not feeling well, and later I found 2 others who seemed sick.

I examined the engineer, who was taken sick the night of the 15th, and found that he had a temperature of 38° C., pulse 96, no albumin in the urine, pain in the epigastric region, but with no tenderness, bowels loose, having taken a cathartic, eyes not injected, slight headache, and no pain in the back or limbs.

On more thoroughly examining the other two, I found one with a temperature of 37.5° C., no albumin in the urine, slight pain in the

epigastric region, no pain in the head or limbs, bowels loose, no cathartic, was taken sick the night of the 15th, and vomited at 3 o'clock the afternoon of the 16th.

The last case, a fireman, was more serious. He had a temperature of 39° C., face pale, pulse 72, and weak, bowels loose, having taken a cathartic, no glandular enlargement, lungs full of sibilant râles, history of cough, ached slightly all over, no tenderness in epigastric region or in calves of legs, and eyes not injected.

None of these men had been ashore except in Santos, fourteen days before. All had been vaccinated at some time. Two had made several voyages south in the same vessel; the seaman with a temperature of 37.5° C., was on his first voyage south, having shipped in New York. A man who had been taken on at Pernambuco the 10th instant, then living in the port forecabin, was well. Two others were shipped in Bahia on the 7th instant. The two sick men live in the starboard side of the vessel, and the engineer amidships. None of the passengers had been sick, nor did any of the other men show any signs of illness. The vessel lay in the open bay at all the Brazilian ports, with the exception of Santos.

I came ashore, notified the health officer of the sickness I had found, and later he and I went off together to see the cases. Finally we came to the conclusion that the fourth engineer and the able seaman, who had been in the bunkers for the past two days, had cramps, while the fireman probably had influenza. I reported the result of these 3 cases of illness on the American bill of health issued at this port.

While these cases did not seem to us to be quarantinable diseases, yet if this vessel had been bound to a southern port of the United States instead of to New York, I would have insisted upon their being landed at Pelican Island quarantine station for observation. Under the circumstances, however, I did not feel justified in subjecting this steamship to the delay, inconvenience, and expense incident to any such action on my part.

I reported to Surg. G. W. Stoner, Public Health and Marine-Hospital Service, Ellis Island, New York, 2 cases of trachoma, which were found in steerage passengers aboard the British steamship *Tennyson*, on the night of March 16, 1905.

FOREIGN AND INSULAR STATISTICAL REPORTS OF COUNTRIES AND CITIES—
YEARLY AND MONTHLY.

AFRICA—*Sierra Leone*.—Two weeks ended March 3, 1905. Estimated population, 50,000. Total number of deaths, 43. No contagious diseases.

AUSTRALIA—*Queensland—Brisbane*.—Three months ended December 31, 1904. Estimated population, 124,463. Total number of deaths, 302, including diphtheria 3, enteric fever 5, scarlet fever 1, and 1 from plague.

BAHAMAS—*Dunmore Town*.—Two weeks ended March 17, 1905. Estimated population, 1,232. No deaths. No contagious diseases.

Governors Harbor.—Week ended March 18, 1905. Estimated population, 1,500. No deaths reported. No contagious diseases reported.

Nassau.—Two weeks ended March 18, 1905. Estimated population, 12,630. No deaths and no contagious diseases reported.

BRAZIL—*Ceará*.—Month of January, 1905. Estimated population, 50,000. Total number of deaths, 90, including 8 from enteric fever.

FRANCE—*Marseille*.—Month of February, 1905. Estimated population, 461,191. Total number of deaths, 1,117, including diphtheria 9, enteric fever 3, measles 1, whooping cough 1, and 114 from tuberculosis.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 76 great towns in England and Wales during the week ended March 11, 1905, correspond to an annual rate of 17.2 per 1,000 of the aggregate population, which is estimated at 15,609,377.

Bradford.—Two weeks ended March 11, 1905. Estimated population, 286,799. Total number of deaths, 175, including diphtheria 4, enteric fever 2, scarlet fever 1, whooping cough 9, and 12 from phthisis pulmonalis.

London.—One thousand five hundred and forty-three deaths were registered during the week, including measles 32, scarlet fever 11, diphtheria 13, whooping cough 53, enteric fever 4, and 11 from diarrhea. The deaths from all causes correspond to an annual rate of 17.2 per 1,000. In Greater London 2,158 deaths were registered. In the "outer ring" the deaths included 4 from diphtheria, 4 from measles, 1 from scarlet fever, 6 from whooping cough, and 2 from diarrhea.

Salford.—Three months ended December 31, 1904. Estimated population, 228,983. Total number of deaths, 1,209, including diphtheria 41, enteric fever 19, measles 84, scarlet fever 23, whooping cough 2, and 115 from phthisis pulmonalis.

Wilton.—Year ended December, 1905. Estimated population, 7,467. Total number of deaths, 97, including 9 from phthisis pulmonalis.

Ireland.—The average annual death rate represented by the deaths registered during the week ended March 11, 1905, in the 21 principal town districts of Ireland was 24.9 per 1,000 of the population, which is estimated at 1,093,959. The lowest rate was recorded in Ballymena, viz, 4.8, and the highest in Lisburn, viz, 59.1, per 1,000. In Dublin and suburbs 189 deaths were registered, including enteric fever 1, measles 1, and 36 from tuberculosis.

Scotland.—The deaths registered in 8 principal towns during the week ended March 11, 1905, correspond to an annual rate of 18.6 per 1,000 of the population, which is estimated at 1,749,917. The lowest rate of mortality was recorded in Edinburgh, viz, 14.4, and the highest in Perth, viz, 24.4, per 1,000. The aggregate number of deaths registered from all causes was 625, including diphtheria 2, measles 6, scarlet fever 1, and 31 from whooping cough.

ITALY—*Milan*.—Month of January, 1905. Estimated population, 532,112. Total number of deaths, 1,382, including diphtheria 29, enteric fever 5, measles 3, scarlet fever 1, and 132 from tuberculosis.

JAPAN—Formosa.—Month of February, 1905. Estimated population, 2,922,585. Total number of deaths not reported. One death from diphtheria, 3 deaths from enteric fever, and 169 deaths from plague reported.

SWITZERLAND.—Reports for the two weeks ended February 25, 1905, from 18 cities and towns having an aggregate population of 827,000, show a total of 788 deaths, including diphtheria 7, enteric fever 3, measles 22, scarlet fever 8, whooping cough 10, and 93 from phthisis pulmonalis.

WEST INDIES—Curaçao.—Two weeks ended March 17, 1905. Estimated population, 31,600. Total number of deaths, 15. No contagious diseases reported.

St. Thomas.—Three months ended December 31, 1904. Estimated population, 11,012. Total number of deaths, 260, including diphtheria 1, enteric fever 5, and 9 from tuberculosis.

Cholera, yellow fever, plague, and smallpox, December 31, 1904, to April 7, 1905.

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from American consuls through the Department of State, and from other sources.]

[For reports received from June 25 to December 30, 1904, see PUBLIC HEALTH REPORTS for December 30, 1904.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]
