

PUBLIC HEALTH REPORTS.

UNITED STATES.

Yellow fever in the United States.

The total number of cases and deaths officially reported at New Orleans is as follows: Cases, 3,357; deaths, 443 from July 21 to October 18, inclusive.

Daily reports from New Orleans:

Date.	Cases.	Deaths.	New foci.
October 12	43	3	12
October 13	25	4	6
October 14	19	5	7
October 15	9	3	2
October 16	15	3	4
October 17	6	1	2
October 18	5	0	2

October 9. Acting Assistant Surgeon Griffiths, Cairo, Ill., reported:

The matter of messengers accompanying Fruit Dispatch trains from New Orleans and Mobile is causing trouble with the State quarantine here again. The matter was adjusted previously by the Fruit Dispatch Company agreeing to have a relay established at Jackson, Tenn., and messengers from any point farther south than that city forbidden entrance into Illinois. Recently this agreement has been disregarded by the Dispatch Company and their messengers have practiced going from New Orleans to Oden, a point north of the quarantine line, obtaining permits through friends and entering Cairo. The Illinois State board of health has now forbidden messengers of the company entrance into the State hailing from any point south of the southern boundary of Illinois, and demands assurance from the general superintendent of the company that the order be not again violated; otherwise the State board proposes to interdict entrance of banana trains from Mobile and New Orleans. Warm days and cool nights prevail and quarantine will likely not be raised until frost here.

October 9 and 10. Surgeon Guitéras reported from Vicksburg, Miss.:

Six new cases, 1 death. Greene reports from Port Gibson 3 new cases on the 7th and 2 on the 8th.

Four new cases, no deaths. Doctor —— acquitted on first charge, and, according to ruling of judge, will be acquitted on others. Inspection service useless, and will be withdrawn to-morrow. State guards around Vicksburg will be removed to-morrow by order of Governor Vardaman. Weather cool, and frost announced for Thursday. Greene reports nothing new at Port Gibson yesterday.

October 9, 10, 11, and 12. From Acting Assistant Surgeon Krauss, Lake Providence, La.:

Three cases, 1 death. Three cases Atherton.

Four cases, 1 death. Two cases Atherton. I am going to Atherton for a personal inspection.

Three cases; no new foci; no deaths. North wind; minimum temperature 50.

One case, 1 death. Yesterday temperature 1 a. m., 50°; 6 a. m., 44°. Light frost.

October 9, 10, 11, and 12. Passed Assistant Surgeon Young reported from Jackson, Miss.:

Three cases, 1 death, Vicksburg; 8 cases, Natchez; 1 new case, 1 death, Hamburg; 6 cases, Roxie; 1 case, Rosetta. McMullen reported from Hamburg.

Hamburg, 1; Gulfport, 5; Rosetta, 2; Port Gibson, 2; Natchez, 6; Roxie, 2 suspicious cases. Hunter has supplied McMullen with all material requested for screening, fumigation, and labor.

Natchez, 5 cases; Vicksburg, 5; Port Gibson, 3; Hamburg, none; Gulfport, 1. Shipment material to McMullen delayed on account cool weather.

Mississippi City, 2 cases; Roxie, 1 suspect; Natchez, 5 cases; Port Gibson, 4 cases; Vicksburg, 2 cases; Hamburg, 1 death. At my suggestion Hunter has employed 8 experienced fumigators in New Orleans, and they will reach Hamburg in morning. Light frost last night. No new cases Lake Providence; first blank day since beginning.

October 9, 10, 11, and 12. From Surgeon Wasdin, Gulfport, Miss.:

No new cases at any point to-day. Scranton matter seems settled by Governor Vardaman's decision to let them alone.

Five new cases here to-day; none elsewhere.

One new case here to-day. Movement looking to lifting all guards lines in the State about the 15th. I think we may safely consider lifting maritime patrol at the same time if conditions remain as now.

Two new cases at Mississippi City. Light frost this morning general along coast. I believe it safe to relax our quarantine restrictions.

October 10. From Sanitary Inspector Porter, Pensacola, Fla.:

New cases yesterday 22, deaths 4; total cases to date 275, total deaths 42; under treatment 123. The British Vice-Consul died last night.

Ask your advice. As fever is spreading over entire city with concealment of cases and determined opposition by a large class of citizenship, do you think any further good can be accomplished by continuing fumigation? The expense is great; number cases increases rather than diminishes, and I can not see any minimization being accomplished. Please advise me.

To Sanitary Inspector Porter:

* * * Bureau advises continuing fumigation and other suppressive measures, notwithstanding spread of disease and local opposition. Can send you Berry, immune, to aid and cooperate with you. Wire quickly if you wish him. Have mailed you to-day several hundred printed copies entitled "How to Prevent Yellow Fever," for general distribution, which may greatly aid you in your work.

October 10, 11, and 12. From Sanitary Inspector Porter:

Thanks for offer of assistance in Berry, but I do not need help in that direction; have sufficient. It is less concealment of cases and more cooperation by citizens that are the desideratum just now. Will appreciate the literature and will follow advice in continuing fumigation. Have a well-organized force.

Number cases yesterday (10th), 32, deaths, 3; total cases to date, 307, total deaths, 48; cases under treatment, 149. New cases to-day, 24, deaths, none; total cases to date, 331, total deaths, 45; under treatment, 165.

New cases to-day, 23, deaths, 3; total cases to date, 354, total deaths, 48; under treatment, 181.

October 11. Passed Assistant Surgeon Berry was ordered to return from Gulfport, Miss., to New Orleans, and to report to Surgeon White for special temporary duty.

October 11 and 12. Surgeon Banks reported that on the former date 32 refugees were admitted to Camp Murray, Florida, and 24 discharged, leaving a total of 78 in camp, and that on the latter date 24 were admitted and 19 discharged.

October 11 and 14. From Dr. Edmond Souchon, president of the State board of health, New Orleans, La.:

Can you not withdraw, about October 20, order of August 21 imposing five days' detention at quarantine of vessels from Colon regardless of disinfection port of departure, provided vessels are fumigated upon arriving at quarantine?

Steamship *Preston*, from Colon, arrived quarantine October 11, now ten days from Colon. Agents request release Sunday night; urgent business reasons. Wire if you consent. Vessel fumigated Colon and refumigated quarantine. All well on board.

October 15 and 16. To Dr. Souchon:

Replying to your telegram of October 14, steamship *Preston*, now twelve days from Colon, fumigated there, refumigated at your station October 11, may on your recommendation be released if all well at final inspection. This is not a precedent nor a reply to your telegram of October 11, which will be answered to-morrow.

Replying to your telegram of October 11 inquiring whether the order of August 21 imposing five days' detention at quarantine on vessels from Colon, etc., can not be withdrawn about October 20, I have to state that under the regular regulations this order is in existence only until November 1. It is not desirable, therefore, to change the order on account of only eleven days.

October 11, 13, 15, and 16. From Surgeon Guitéras, Vicksburg, Miss.:

Six new cases, no deaths. Weather cool; frost probably to-night. Greene reports 3 new cases at Port Gibson. Consider situation improved.

Yesterday's report 2 new cases, no deaths. Minimum temperature for last three days 50°, 45°, and 50°. Frost yesterday morning. Epidemic practically terminated.

One case, no deaths.

Four new cases, 2 deaths; 2 new cases in Warren County. General fumigation fairly complied with to-day. Greene reports for Port Gibson 3 cases, 1 death yesterday, and 2 cases to-day.

One case, 1 death in city; only 14 under treatment. One case in the country. Weather continues warm and unfavorable.

October 12. Surgeon White reported his departure from New Orleans for Mobile to confer with State Health Officer Sanders. After his return to New Orleans he reported his departure for Jackson, Miss., for conference with Secretary Hunter of the Mississippi State board of health, concerning passenger traffic.

October 13. From State Health Officer Sanders, Castleberry, Ala.:

I report 2 cases of yellow fever at this place, both fatal. Source of infection not yet traced.

October 13, 14, 15, and 16. From Surgeon Wasdin, Gulfport, Miss.:
Three new cases in Gulfport.

One new case in Gulfport to-day.

Conference last night at Jackson with White and Hunter; agreed not to lift quarantine for some time on persons. Relays of equipment to be abolished.

One new case at Gulfport to-day.

October 13, 14, 15, and 16. From Sanitary Inspector Porter, Pensacola, Fla.:

New cases 29, deaths 3; total cases to date, 383, total deaths, 51; cases under treatment, 187.

New cases to-day 11, deaths 1; total cases to date, 394, total deaths, 53; under treatment, 180. 92 houses fumigated.

New cases to-day 16, deaths 2; total cases to date, 410; total deaths, 55; cases under treatment, 184. Heavy rain nearly all day prevented fumigation.

Cases to-day 7, deaths 2; total cases to date, 417, total deaths, 55; under treatment, 178. Houses fumigated to-day, 194.

October 14. Passed Assistant Surgeon Rosenau, on duty at New Orleans, was ordered to rejoin his station, the Hygienic Laboratory, Washington.

October 14, 15, and 16. From Passed Assistant Surgeon Young, Jackson, Miss.:

Port Gibson, 3 cases, 1 death; Vicksburg, 1 case; Hamburg, no new cases; Natchez, 6 cases; Gulfport, 1 case.

Natchez, 7 cases, 1 death; Vicksburg, 4 cases, 2 deaths, with 2 cases and 2 deaths in the county; Port Gibson and Hamburg not heard from.

Gulfport, 1; Port Gibson, 1; Vicksburg 1 and 1 death, and 1 case in the county; Natchez, 3; Hamburg, 1.

October 15 and 16. Acting Assistant Surgeon Krauss reported from Lake Providence, La.:

No new cases, no deaths. All sick doing well. Time for frost. Increase due to mosquitoes seeking shelter. Coming week will decide matter. Weather much warmer. No new cases, no deaths; cases from the county reported yesterday found to be malaria. Four cases old focus, Shelburne district.

No new cases, no deaths; 1 case on Gailard plantation from local focus; 2 cases Benjamin plantation. Think these are last exposures.

ASIATIC CHOLERA IN EUROPE.

The following report of cholera in Germany supplemental to the reports printed in the Public Health Reports, October 6 and 13, was issued by the German imperial health office and transmitted by Consul-General Thackara, Berlin:

FROM DATE OF OUTBREAK TO SEPTEMBER 2, 1905.

Name of city (with administrative district).	Popula- tion last census.	Day of outbreak.	New cases.	Number died.
<i>Government district of Marienwerder.</i>				
Thorn	29,635	Aug. 29	2	1
Culm	11,079	Aug. 16	9	4
Neuenburg	5,005	Sept. 2	2	1

Labischin	2,248	Sept. 9	1
<i>Government district of Breslau.</i>				
Kosel	514	Sept. 19	1	1

September 19. Through the Department of State, Consul Kehl, Stettin, Germany, confirmed his cable of the same date, announcing 1 death from cholera at Stettin and 3 suspicious cases, and stated that the American consul at Copenhagen had been advised of existing conditions for the reason that transshipments from Stettin via Copenhagen to the United States do not come under the supervision of the consul at Stettin.

September 26. From Consul Thackara, Havre, France:

Immediately after the presence of Asiatic cholera in Germany and other places in Europe was officially declared the officials of the French Line were notified that all third-class passengers coming from infected districts to take passage to the United States must not be allowed to embark on the vessels of the company until after they have been held under medical surveillance for at least six days and their baggage carefully inspected and disinfected. If at the end of that period the principal medical officer of the company would declare officially that the detained passengers were in sound physical condition, they would be permitted to embark, provided that in all other respects they fulfilled the requirements of the United States immigration laws. The company was also notified that first and second class passengers coming from cholera-infected districts should be detained and held under medical surveillance for five days, unless they could satisfy the officers of the company that within five days before their departure they or their baggage had not been liable to infection.

On the arrival of the third-class passengers, and at the departure of every steamer bound for the United States, either the consul or vice-consul is present to superintend the inspection and disinfection of their baggage in order to see that the instructions from the consulate are carried out.

The Compagnie Generale Transatlantique (French line) has been very zealous in cooperating with this consulate in using every effort to prevent the introduction of cholera into the United States by passengers crossing on their vessels. The sanitary conditions of the port of Havre are satisfactory, and no infectious or contagious diseases prevail in an epidemic form.

The port authorities have adopted strict measures for the inspection, disinfection, and, if necessary, the quarantine of all vessels coming from cholera-infected ports.

September 27. The following was transmitted from the American embassy, St. Petersburg, through the Department of State:

In a notice dated September 26, the imperial ministry for foreign affairs informs this embassy that in accordance with a communication from the imperial commission, instituted to combat the propagation of pestilence in Russia, there have been, from the 14th to the 24th of September, 27 cases of cholera, as follows: At Wlatslawsk, Province of Warsaw, 3 cases and 3 deaths; at Lodz, Province of Petrokov, 3 cases and 3 deaths; in the Province of Lomza, 21 cases and 11 deaths.

September 30. Passed Assistant Surgeon McLaughlin reported from Hamburg, Germany, for the seven days ended September 30, 1905:

The health of Hamburg continues good. No quarantinable disease has been reported since the last case of cholera, September 6. Steerage passengers, as usual, are detained six days under close observation, and their baggage is disinfected by steam. Bills of health were issued to the following vessels: *Aral*, *Elswich*, *Hall*, *Albano*, *Molke*, *Wilhelmina*, *Fürst Bismarck*, *Dacia*, and *Alexandria*.

October 2. Assistant Surgeon Foster reported from Trieste, Austria:

During the week ended September 30, 1905, there were no vessels carrying emigrants leaving the port of Trieste. During the past week no cases of cholera or of suspected cholera have been reported from Galicia. During the week ended September 23, 1905, the following cases of contagious diseases occurring in Trieste were reported at the health office: Measles, 12 cases, 4 deaths; scarlatina, 5 cases, no deaths; whooping cough, 2 cases, 1 death; and typhoid fever, 17 cases, no deaths.

For the week ended September 30, 1905, there were reported: Measles, 7 cases, 2 deaths; scarlatina, 7 cases, 1 death; diphtheria, 2 cases, no deaths; and typhoid fever, 15 cases, 3 deaths.

A dispatch from Lomza, dated September 23, 1905, reports 2 deaths from cholera, one of which occurred in Kreise, district of Lomza, the other in Kreise Mazorvirsk. From Wlatslawsk 1 new case of cholera was reported on September 23. From Lodz there were reported 12 new cases. A dispatch from Stockholm, dated September 23, 1905, states that the Swedish Government has ordered a disinfecting station to be established at Trelleborg, and that passengers arriving at that place from Sassnitz undergo a medical examination.

October 2 Consul-General Thackara reported from Berlin, Germany:

According to the imperial health office bulletin, the number of cholera cases and deaths therefrom in Germany indicates a considerable abatement of the disease during the last two weeks. There were registered in the whole Empire, during the week ended September 9, 56 fresh cases (23 deaths), as compared with 38 new cases (16 deaths) during the week ended September 16, and 21 cases (6 deaths) registered during the week ended September 23.

[Reports to the Surgeon-General Public Health and Marine-Hospital Service.]

Report from Nome, Alaska.—Case of smallpox on steamship Ohio.—Treatment of vessel.

Acting Assistant Surgeon Derbyshire reports, September 25, as follows:

The steamship *Ohio* arrived from St. Michael this morning. I have destroyed all bedding and rugs in the room occupied by the smallpox case; washed with bichloride all woodwork in that part of the ship; fumigated with formaldehyde and painted woodwork and floors; vaccinated all unvaccinated members of crew, and given captain and ship's physician instructions to watch closely the crew and, if any symptoms develop, to isolate and report at Port Townsend for inspection.

The case under quarantine is progressing favorably.

INSPECTION SERVICE, MEXICAN BORDER.

Inspection at Eagle Pass, Tex.

Acting Assistant Surgeon Hume reports as follows:

	Week ended Oct. 7, 1905.
Persons inspected on trains	204
Persons held	0

Inspection at El Paso, Tex.

Acting Assistant Surgeon Alexander reports as follows:

Week ended October 7, 1905. Inspected Mexican Central passengers, 226; inspected Mexican Central immigrants, 73; inspection of Syrians, 10; inspection of Japanese, 4; certificates of health issued, 67; disinfection of soiled linen imported for laundry work, 298 pieces; disinfection of bedding, blankets, etc., of immigrants from localities where smallpox is said to exist, 57 pieces; detention of 2 Spaniards from Veracruz for two days to complete necessary period; vaccination of children of immigrants, 3.

STATISTICAL REPORTS OF STATES AND CITIES OF THE UNITED STATES,
YEARLY AND MONTHLY.

CALIFORNIA—*Los Angeles*.—Month of September, 1905. Estimated population, 200,000. Total number of deaths, 223, including cerebrospinal meningitis 1, diphtheria 3, enteric fever 2, whooping cough 3, and 39 from tuberculosis.

San Francisco.—Month of June, 1905. Estimated population, 475,000. Total number of deaths, 554, including diphtheria 3, enteric fever 9, whooping cough 9, and 83 from tuberculosis.

Stockton.—Month of September, 1905. Estimated population, 20,000. Total number of deaths, 20, including enteric fever 1, and 5 from tuberculosis.

COLORADO—*Colorado Springs*.—Month of January, 1905. Estimated population, 30,000. Total number of deaths, 43, including 13 from tuberculosis.

Month of February, 1905. Total number of deaths, 41, including 14 from tuberculosis.

Month of March, 1905. Total number of deaths, 41, including 14 from tuberculosis.

Month of April, 1905. Total number of deaths, 33, including cerebrospinal meningitis 1, and 9 from tuberculosis.

Month of May, 1905. Total number of deaths, 32, including 10 from tuberculosis.

Month of June, 1905. Total number of deaths, 25, including 8 from tuberculosis.

Month of July, 1905. Total number of deaths, 39, including whooping cough 1, and 14 from tuberculosis.

Month of August, 1905. Total number of deaths, 29, including enteric fever 1, and 15 from tuberculosis.

CONNECTICUT.—Reports to the State board of health for the month of September, 1905, from 165 towns having an aggregate estimated population of 985,833 show a total of 1,195 deaths, including diphtheria 19, enteric fever 35, measles 1, scarlet fever 1, whooping cough 5 and 111 from phthisis pulmonalis.

Hartford.—Month of September, 1905. Estimated population, 92,000. Total number of deaths, 108, including cerebro-spinal meningitis 2, diphtheria 1, enteric fever 4, and 11 from tuberculosis.

Stamford.—Month of September, 1905: Estimated population, 18,000. Total number of deaths, not reported. No deaths from contagious diseases reported.

INDIANA.—The monthly bulletin of the Indiana State board of health says:

Month of August, 1905: Total number of deaths, 3,070. Rate, 13.6. In the corresponding month last year, 2,980 deaths; rate, 13.2. In the preceding month, 2,774 deaths; rate, 12.3. Deaths by important ages were: Under 1 year, 665, or 22.7 per cent of the total; 1 to 5 years, 287; 5 to 10, 53; 10 to 15, 55; 15 to 20, 90; 65 and over, 735, or 25.1 per cent of the total. Some important causes of death were: Tuberculosis, 340, of which 292 were pulmonary; typhoid fever, 125; diphtheria, 12; scarlet fever, 6; measles, 1; whooping cough, 15; pneumonia, 61; diarrheal diseases, 478; cerebro-spinal meningitis, 56; influenza, 1; puerperal fever, 8; cancer, 126; violence, 190; smallpox, none.

LOUISIANA—*Baton Rouge.*—Month of September, 1905. Estimated population, 19,890. Total number of deaths 32, including yellow fever 1, and 3 from tuberculosis.

New Orleans.—Month of September, 1905. Estimated population, 325,000; white, 239,000; colored, 86,000. Total number of deaths, 576; white, 370; colored, 206, including diphtheria 3, enteric fever 5, whooping cough 2, and 81 from tuberculosis.

MICHIGAN.—Mortality during September, 1905: The total number of deaths returned to the secretary of state for September was 3,050, an increase of 253 over the number returned for the preceding month. The death rate was 14.6 per 1,000, as compared with 12.9 for August. There were over 400 more deaths in Michigan during September, 1905, than during September, 1904.

By ages there were 804 deaths of infants under 1 year, 257 deaths of children aged 1 to 4 years, and 789 deaths of persons over 65.

Important causes of deaths were as follows: Tuberculosis of lungs, 175; other forms of tuberculosis, 38; typhoid fever, 68; diphtheria and croup, 22; scarlet fever, 4; measles, 3; whooping cough, 11; pneumonia, 65; diarrhea and enteritis of infants under 2 years, 527; cancer, 146; accidents and violence, 230. There was a slight increase in the mortality from typhoid fever and a very considerable increase in that from diarrhea of infants.

There was only 1 death from smallpox during September, which occurred in Caseville Township, Huron County, and 1 death from tetanus reported from Bay City.

MINNESOTA—*Winona.*—Month of September, 1905. Estimated population, 23,000. Total number of deaths, 21, including cerebro-spinal meningitis 1, and 2 from phthisis pulmonalis.

NEW HAMPSHIRE—*Franklin.*—Month of September, 1905. Esti-

mated population, 6,000. Total number of deaths, 4. No deaths from contagious diseases.

PENNSYLVANIA—*Dunmore*.—Month of September, 1905. Estimated population, 17,500. Total number of deaths, 12. One death from tuberculosis reported.

RHODE ISLAND—*Newport*.—Month of September, 1905. Estimated population, 28,000. Total number of deaths, 34, including enteric fever 1, measles 1, and 5 from tuberculosis.

TENNESSEE—*Chattanooga*.—Month of September, 1905. Estimated population, 40,000; white 27,000, colored 13,000. Total number of deaths, 38; white 18, colored 20, including enteric fever 1 and 5 from tuberculosis.

VIRGINIA—*Richmond*.—Month of September, 1905. Estimated population, 100,000; white 62,250, colored 37,750. Total number of deaths, 124; white 66, colored 58, including diphtheria 1, enteric fever 7, and 12 from tuberculosis.

WASHINGTON—*Tacoma*.—Month of September, 1905. Estimated population, 75,000. Total number of deaths, 48, including diphtheria 2 and 4 from phthisis pulmonalis.

WISCONSIN—*Milwaukee*.—Month of August, 1905. Estimated population, 335,000. Total number of deaths, 340, including diphtheria 1, enteric fever 3, whooping cough 2, and 39 from tuberculosis.

ARRIVALS OF IMMIGRANTS.

FOREIGN AND INSULAR.

AFRICA.

Report from Cape Colony—Examination for plague-infected animals.

COLONIAL SECRETARY'S OFFICE,
Cape Town, Cape of Good Hope, September 11, 1905.

The following report by the medical officer of health for the Colony on the occurrence of bubonic plague in the Cape Colony for the week ended September 9, 1905, is published for general information.

NOEL JANISCH,
Under Colonial Secretary.

Port Elizabeth.—No case of plague was discovered during the week. At the plague hospital, one native male was discharged. No case remains under treatment. One hundred and thirty-seven rats (10 found dead) and 108 mice (2 found dead) were bacteriologically examined during the week, of which 5 rats and 1 mouse proved to be plague infected.

Uitenhage.—Thirty-seven rats and 101 mice (1 found dead) were bacteriologically examined during the week without any signs of plague infection being discovered.

East London.—No case of plague was discovered during the week. At the plague hospital no cases were under treatment. Fifty rats (11 found dead) and 45 mice (5 found dead) were bacteriologically examined during the week without any definite plague infection being discovered.

King William's Town.—No case of plague was discovered during the week. Fifty-three rats (9 found dead) and 10 mice (6 found dead) were bacteriologically examined during the week without any signs of plague infection being discovered.

Other districts of the Colony.—No plague infection was discovered either in man or animals. Five hundred and seventy-five rodents were examined during the week from the Cape Town harbor board area and the shipping in the harbor, and 5 from the Claremont municipality; also 695 were examined by the medical officer of health for the city from the Cape Town municipal area.

A. JOHN GREGORY,
Medical Officer of Health for the Colony.

AUSTRIA-HUNGARY.

Report from Fiume—Inspection of emigrants.

Consular Agent La Guardia reports, September 22, as follows:
The steamship *Slavonia* sailed September 21, 1905, for New York; inspected and passed 1,877 steerage passengers; rejected at final inspection, 22; inspected and labled 2,000 small and 46 large pieces of baggage; disinfected 74 pieces containing used feathers and bedding.

BRITISH HONDURAS.

Report from Belize, fruit port.

Acting Assistant Surgeon Cooke reports as follows: Week ended October 5, 1905. Present officially estimated population, 8,500; number of deaths, 8; prevailing diseases, malarial fever and intesti-

nal diseases; general sanitary condition of this port and the surrounding country during the week, fair.

Bills of health were issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
Sept. 29	Katie	Mobile	24	0	0	0
Oct. 5	George Dumois	New Orleans via Central American ports.	20	1	0	0

CHINA.

Report from Hongkong—Quarantine precautions—Quarantinable diseases.

Passed Assistant Surgeon White reports, September 5, as follows:
Week ended September 2, 1905:

Government notification that restrictions enforced by Hongkong remain as reported on April 15, 1905.

Government notification that restrictions enforced against Hongkong remain as reported on July 15, 1905.

Return of quarantinable diseases:

Plague	cases, 5	deaths, 4.
Return of disease contemplated in paragraph 67:		
Enteric fever	cases, 4	death, 1
Puerperal fever	case, 1	death, 1.

Emigrants recommended for rejection.

Number of emigrants per steamship *Coptic* recommended September 12, 1905, for rejection: for Honolulu, 2; for San Francisco, 15.

Report from Shanghai—Inspection of vessels—Cholera.

Acting Assistant Surgeon Ransom reports, September 13, as follows:

During the week ended September 9, 1905, one supplemental bill of health was issued and there were inspected, 1 vessel, 294 crew, and 219 steerage passengers. Eight pieces of baggage were disinfected, and 7 pieces were inspected and passed. Nine immigrants for San Francisco, per steamship *Korea*, were examined, 7 of whom were passed, and 1 rejected on account of trachoma. One immigrant for Port Townsend, per barkentine *Makaweli*, was examined and rejected on account of pulmonary tuberculosis.

The official statement of the municipal health officer shows that there were reported during the week, among foreigners 1 new case of tuberculosis, and among natives 1 death from diphtheria and 30 deaths from tuberculosis. The total reported mortality was 106 natives.

From what I believe to be a fairly reliable source, I learn that up to the present time there has been a mortality of something like 400 natives in one guild in Shanghai (with a membership approximating, I am told, 200,000) from cholera. At the present moment the disease

seems to be in complete abeyance. While the figures quoted can not be taken as absolutely accurate, they give a fair idea of the morbidity during July, August, and September of this year, from the disease in question. With a population of 400,000 natives in Shanghai, I do not believe it would be far out of the way to say that there have been over 600 deaths from cholera within the last three months. This has, of course, been an exceptionally healthy year here, so far as cholera is concerned.

No quarantinable diseases were reported from outports.

Report from Niuchwang—Plague.

The following is received from the American consul-general under date of October 12: Plague reported to-day, originating Antung. One death here. Traffic interior temporarily interrupted.

COSTA RICA.

Reports from Limon, fruit port.

Acting Assistant Surgeon Goodman reports as follows: Week ended September 30, 1905. Estimated population, 4,000; 2 deaths; prevailing disease, malarial fever; general sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
Sept. 26	Banan.....	Boston	18	0	0
27	Alleghany.....	New York	48	16	6
27	Anselm.....	Mobile.....	39	0	0
28	San José.....	New Orleans..	43	0	0
29	Nicoya.....	New York.....	53	3	0
30	Limon.....	Mobile.....	44	0	0

One bill of health for Colon was viséed.

Week ended October 7, 1905. Number of deaths, 5; prevailing disease, malarial fever; general sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
Oct. 2	Siberia.....	New York....	53	47	9
5	Origen.....	Mobile.....	23	0	0
6	Zent.....	New York....	53	0	0
7	Esparta.....	New Orleans..	43	0	0

One bill of health for Colon was viséed.

CUBA.

Report from Habana—Inspection of vessels—Vaccination certificates issued—Cases of sickness on vessels.

Acting Assistant Surgeon Delgado reports, October 9, as follows:

Week ended October 7, 1905.

Vessels inspected and bills of health issued.....	27
Crew of outgoing vessels inspected.....	1,063
Passengers of outgoing vessels inspected.....	823
Certificates of vaccination issued for Panama Canal Zone.....	19

Cuban steamship *Mobila*, arrived from Mobile October 5, 1905, had first officer with fever of 38°; probably malaria. He was sent to hospital for observation.

From September 15 to 30, inclusive, there arrived at this port the following cases of sickness, which were landed and sent to hospital:

September 15. Steamship *La Navarre*, from Spain, 1 passenger with dengue.

September 17: French steamship *La Navarre*, from Spain, 1 passenger with malarial fever; Spanish steamship *Manuel Calvo*, from Spain, 1 passenger with enteric fever.

September 18: British schooner *E. L. Cottingham*, from Mobile, 1 sailor with dengue.

September 19: Spanish steamship *Alfonso XIII*, from Veracruz, 1 passenger with dengue; 1 passenger with malarial fever.

September 25: American steamship *Seneca*, from Tampico, 1 policeman with malarial fever.

September 26: American steamship *Miami*, from Key West, 1 passenger with tuberculosis.

September 29: Spanish steamship *Manuel Calvo*, from Veracruz, 1 passenger with measles.

September 30: Spanish steamship *Albingia*, from Tampico and Veracruz, 1 passenger with malarial fever; American steamship *Martinique*, from Key West, 1 passenger with dengue.

During the month of September 91 vessels with 3,787 crew and 1,860 passengers were cleared from this port.

No quarantinable diseases reported during the week.

Certificates of vaccination issued.

During the month of September, 1905, certificates of vaccination were issued to 30 persons leaving this port for Ancon, Canal Zone.

Report from Matanzas—Inspection of vessels—Epidemic dengue.

Acting Assistant Surgeon Nuñez reports, October 9, as follows:

During the week ended October 7, 1905, bills of health were issued to 3 vessels leaving for United States ports in good sanitary condition.

One case of diphtheria was officially reported in the city during the past week. The epidemic of dengue continues to spread throughout the town without causing any mortality.

No quarantinable diseases have been reported within this district.

ECUADOR.

*Report from Guayaquil—Mortality—Smallpox and yellow fever—
Inspection and fumigation of vessels.*

Temporary Acting Assistant Surgeon Gomez reports, September 27, as follows:

Week ended September 26, 1905:

Present officially estimated population, 60,000.

Mortality from all causes, 49, as follows: Smallpox, 4; yellow fever, 1; infectious fever, 6; stillbirth, 2; bronchitis, 1; tuberculosis, 6; tetanus, 1; whooping cough, 1; gastric fever, 4; meningitis, 1; nephritis, 1; pneumonia, 2; paralysis, 1; enteritis, 2; paludic fever, 1; from all other causes, 15.

On September 21 the steamship *Peru*, from Chilean and Peruvian ports, was dispatched for Ancon, Canal Zone, with 4 cabin and 3 steerage passengers from this port; 8 cabin and 1 steerage passengers from ports south were placed in quarantine, to complete ten days from port of last exposure. The passengers were all examined; also 19 pieces of baggage. Vessel fumigated, and 3 certificates of immunity issued.

GERMANY.

Report from Berlin—Death rate of Berlin and other cities.

Consul-General Thackara reports, October 2, as follows:

The death rate of Berlin for the week ended September 16 was considerably lower than that of the preceding week, and thereby lower than it has been for three months, amounting, calculated on the year, to 14.1 per thousand of the population, thus being also lower than the rate for the same week of last year, in which it amounted to 14.8 per thousand. Of the large towns and cities of Germany more than two-thirds showed less favorable health conditions than Berlin, including, among others, Munich, Nuremberg, Stuttgart, Frankfort on the Main, Cologne, Bremen, Brunswick, Magdeburg, Leipzig, Dresden, Breslau, Konigsberg, and Rixdorf (with 16.4). On the other hand, the following cities had a lower death rate than Berlin, viz, Cassel, Hanover, Schoneberg (with 12.3), and Charlottenburg (with 11.9). Paris and Vienna also had a higher death rate than Berlin, while the rate of mortality of London was lower than that of this city.

There were registered 124 deaths from cholera and catarrh of the stomach and intestines (as compared with 206 in the preceding week), 84 deaths from tuberculosis, 48 deaths from acute diseases of the respiratory organs, 37 deaths from cancer, 6 deaths from measles, 4 deaths from influenza, 3 deaths from scarlet fever, 2 deaths from diphtheria, and 6 deaths from enteric fever. Finally, 15 persons died by violence.

GUATEMALA.

Report from Livingston, fruit port.

Acting Assistant Surgeon Peters reports as follows: Week ended September 30, 1905. Present officially estimated population, 3,500; 2 deaths; prevailing disease, malarial fever; general sanitary condition of this port and the surrounding country during the week, good.

Bill of health was issued to the following-named vessel:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
Sept. 27	Katie.....	Mobile via Belize.	24

Circular relative to measures against the spread of yellow fever at Zacapa and Gualan.

(ISSUED BY GOVERNMENT OF GUATEMALA.)

Mosquitoes breed in confined water in cisterns, pipes, etc. These deposits of water should be emptied or covered with a thin layer of petroleum. The water may be used to wash clothes.

In the rooms burn sulphur. This should be done in the morning. At night burn insect powder before retiring.

Use mosquito bars.

Persons who are not immune, recently arrived, etc., should avoid houses where the fever has already occurred and seek houses where it has not been present.

All fever cases are infectious during the first three days. The patients should be isolated, or at least provided with mosquito bars.

Any person falling ill with a high fever that begins with a chill will do well not to accept the case as one of cold or malaria, but consider himself attacked with yellow fever.

As soon as illness begins 1 grain of calomel should be taken, and afterwards, every two hours, 1 teaspoonful of sulphate of magnesia and cream of tartar, use of this mixture to be continued during the first three days; also one-half gram of salol can be taken every three hours during these three days.

Absolutely nothing should be eaten; only lemonade, tea, and gruel should be taken. Milk and alcoholic drinks are injurious.

In case of pains in the stomach, which nearly always indicate intestinal hemorrhage, 20 drops of laudanum should be taken at one time.

From the time that the first case of yellow fever appears in a non-infected town fifteen days elapse before there are secondary cases. This time should be utilized to kill the mosquitos in the house where the sickness occurred.

HAWAII.

Plague at Waipahu and Honolulu.

HONOLULU, *October 11, 1905.*

WYMAN, *Washington:*

Two plague, Waipahu, October 9, fatal; 1, Honolulu, October 10.

HOB DY.

INDIA.

Reports from Calcutta—Transactions of Service—Cholera and plague mortality—Destruction of rats at Rangoon.

Acting Assistant Surgeon Eakins reports, September 14, as follows:

During the week ended September 9, 1905, bill of health was issued to the steamship *Koranna*, bound for Boston and New York, with a total crew of 56. The usual precautions were taken, holds fumigated, rat guards placed on wharf lines, and the effects of Asiatics disinfected.

During the week ended September 2, 1905, there were 28 deaths from cholera and 11 deaths from plague, and during the week ended September 9, 1905, 34 deaths from cholera and 15 deaths from plague in Calcutta.

In Bengal during the week ended August 26, 1905, there were 71 cases and 54 deaths from plague, and during the week ended September 2, 1905, 78 cases and 61 deaths.

In India during the week ended August 26, 1905, 2,873 cases and 2,050 deaths from plague, and during the week ended September 2, 1905, 3,157 cases and 2,330 deaths.

It is reported from Rangoon that the destruction of rats was continued with unabated vigor during the month of August. During that month there were 13,128 rats destroyed. Total since February, when the epidemic commenced, to the end of August, 142,985.

ITALY.

Report from Naples—Inspection of vessels—Rejections of emigrants recommended—Infectious diseases.

Acting Assistant Surgeon Buonocore reports, October 2, as follows:

During the week ended September 30, 1905, the following ships were inspected at Naples, Messina, and Palermo:

NAPLES.

Infectious diseases.

For the week ended September 28, 1905, the following reports were officially registered:

Smallpox.—Two cases at Terracina (Rome), two cases at Trusacco (Aquila). Sporadic cases were reported in the Provinces of Novara, Treviso, and Caltanissetta.

Measles.—Few cases in all Provinces.

Scarlatina.—Eleven cases at Cammarata (Girgenti) and 20 cases at Piazza Armerina (Caltanissetta).

Enteric fever.—A great number of cases reported in the 69 Provinces of Italy. The malady is still prevalent at Milan and Rome, where 56 and 43 cases, respectively, have been reported.

Diphtheria.—Cases were reported in the Province of Parma.

Malaria.—The disease is still prevailing in southern Italy, in Sardinia, and Sicily. In addition a great number of cases are now reported in the rice fields of several northern Provinces, especially Milan and Novara.

Anthrax.—There were reported 5 cases at Prazzo, 3 at Perosa (Aquila), and 5 cases at Sulera (Caltanissetta).

JAPAN.

Report from Yokohama—Inspection of vessels—Cholera case previously reported diagnosed as cholérine—Plague at Kobe and in Formosa.

Passed Assistant Surgeon Moore reports September 16 and 23 as follows:

During the week ended September 9, 1905, bills of health were issued, after inspection, to 3 steamships having an aggregate personnel of 210 crew and 149 passengers; 41 steerage passengers were bathed and their

body clothing was disinfected; 82 aliens, would-be steerage passengers for the United States, were examined with reference to their freedom from any loathsome or any dangerous contagious disease barred by the United States immigration laws.

The case of cholera reported as having occurred in Yokohama during the week ended August 20 should have been classified as cholerae. With this possible exception no case of the above disease has been notified in this city during the present year.

With reference to the outbreak of plague in Kobe, it is stated that during the week ended September 9 there were reported 9 new cases, 4 deaths, 1 recovery, and remaining under treatment, 7.

Reports from Formosa indicate that during the month of August only 2 new cases of plague, both fatal, were reported in the island. This statement, if correct, shows a very remarkable diminution as compared with the previous months of the year. From January 1 to August 31 there have occurred in Formosa a total of 2,380 cases of plague, with 2,078 deaths.

During the week ended September 16, 1905, 4 steamships, having an aggregate personnel of 136 crew and 4 passengers, were inspected prior to the issuance of bills of health. Under the supervision of this office the hold of 1 vessel was fumigated with sulphur dioxide for the purpose of destroying rats.

No official report of the health of Yokohama has been received for the period subsequent to the week ending August 27.

An additional case of plague occurred in Kobe on the 19th instant.

Emigrants recommended for rejection.

Number of emigrants per steamship *Coptic* recommended September 23, for rejection: For Honolulu, 10.

Per steamship *Kanagawa Maru*, September 26, 1905: For Seattle, 27.

MEXICO.

Report from Progreso—Mortality—Sanitary conditions—Mosquitoes.

Acting Assistant Surgeon Harrison reports October 3, as follows:

Week ended October 3, 1905. No quarantinable disease has been reported here or in Merida; 5 deaths occurred here from malaria, gastro-enteritis, intestinal infection, and tuberculosis; 4 vessels were dispatched carrying crews 140 and passengers 50. Conditions have been about the same, with hot weather, some rains, and increased number of mosquitoes. There are many uncovered water containers filled or partly filled with water and swarming with mosquitoes in various stages of development.

Report from Tampico—Inspection and fumigation of vessels—Mortuary statistics—Stegomyia increasing.

Acting Assistant Surgeon Frick reports, October 9, as follows:

Week ended October 7, 1905.

October 1: Fumigated and passed the British steamship *Musician*, bound for Galveston, with 49 Lascars and 15 Europeans in the crew;

vessel sails in ballast. October 3: Inspected the American steamship *Matanzas*, bound for New York, with 41 in the crew and 3 passengers; vessel sails in general cargo. October 5: Fumigated and passed the Norwegian steamship *Malm*, bound for Galveston, via Port Arthur, with 18 in the crew; vessel sails with a small cargo of ixtle. Inspected and passed the Norwegian steamship *Nor*, bound for New Orleans, via Progreso, with 18 in the crew; vessel sails with general cargo. October 7: Fumigated and passed the Norwegian steamship *Tabor*, bound for Norfolk, via Perth Amboy, N. J., with 38 in the crew; vessel sails with a cargo of lead and copper bullion. Fumigated and passed the British steamship *Asian*, bound for New Orleans, with 52 in the crew; vessel sails with a small cargo of cotton-seed oil cake.

Mortuary report.

Alcoholism, 2; drowned, 2; phthisis pulmonalis, 3; cirrhosis of the liver, 1; paludism, 2; premature birth, 1; pernicious fever, 1; congenital debility, 1; railroad accident, 1; pneumonia, 1; dropsy (organic lesion not defined), 1; intermittent fever, 2; total, 18. Estimated population, 20,000. Annual mortality rate for the week, 46.80.

No quarantinable disease was reported during the week.

The sanitary situation continues the same as reported last week. *Stegomyia* are slowly but gradually increasing and *Anopheles* becoming more of a pest. Malarial fever is increasing in number of cases as well as severity of form. Some crude petroleum was sprinkled on various water surfaces.

We had a norther during the week without the least beneficial effect, the mosquitoes becoming, on the contrary, more and more vicious.

Report from Veracruz—Inspection and fumigation of vessels—Yellow fever.

Passed Assistant Surgeon Wilson reports, October 3, as follows:
Week ended September 30, 1905:

Vessels inspected and bills of health issued.....	9
Vessels fumigated with sulphur to kill mosquitoes.....	2
Vessels with mosquitoes found on board (culex).....	4
Number of crew inspected.....	452
Number of passengers inspected.....	212

One case and 1 death of yellow fever were reported during the week.

NICARAGUA.

Report from Bluefields, fruit port.

Acting Assistant Surgeon Layton reports as follows: Week ended October 1, 1905: Present officially estimated population, 3,500; prevailing diseases, malarial fever and dysentery; 1 death; general sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
Sept. 25	Chelston	Boston via Great River and Prinzapulka Nicaragua.	33	1	0
29	Schr. Myra W. Spear .	Delaware Breakwater via Coon Island and San Andreas.	5	0	0
30	Imperator	Mobile	20	0	0

The steamship *Chelston* left with 1 passenger, but is said to have picked up 2 more in Prinzapulka, Nicaragua, on her way to Boston.
 Schr. *Myra W. Spear* cleared for Delaware Breakwater via Coon Island, Nicaragua, and San Andreas, Colombia.

NORWAY.

Quarantine proclamation—Precautions against importation of cholera.

The following is received from Consul Bordewich:

[From the Royal Norwegian Government's Justice and Police Department.]

Posen and East Prussia, also Poland, shall, until further notice, be considered infected with cholera.

According to previous proclamations Palestine, Syria, the cities of Baku and Saratow in Russia, and West Prussia, including the port of Dantzig, are at present also to be considered infected with cholera.

Vessels having cholera patients on board and bound for Norwegian ports should be directed by the pilots to the quarantine station at Odderen, near Christiansand; in other ports the captains are required to keep their sick people on board and in meantime are kept in quarantine.

A number of this circular, which takes the place of the one issued by this Department September 4, this year, are inclosed for distribution among interested parties.

Christiania, September 27, 1905.

E. HAGERUP BULL.
 GEORG JOHANNESSEN.

PANAMA.

Report from Bocas del Toro, fruit port—Yellow fever—No effort made to eradicate mosquitoes in vicinity of yellow-fever case.

Acting Assistant Surgeon Osterhout reports as follows: Week ended September 29, 1905: Present officially estimated population not obtainable; 1 death; prevailing diseases, malarial fever and yellow fever; general sanitary condition of this port and the surrounding country during the week, infected. No effort is made by the local authorities to eradicate the infected mosquitoes in the neighborhood of the third case of yellow fever originating in this port.

Bills of health were issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
Sept. 23	J. B. Camors	Colon.....	1	0	(a)
23	Taunton	Mobile	26	0	0	0
27	Anselm	Mobile, via Limon.	39	3	0	7
28	Fort Morgan	Mobile	24	0	0	0

^a Not inspected.

History of fourth yellow-fever case.

October 2, 1905:

I have to report the existence of the fourth case of yellow fever to originate in this port this season.

The patient, a machinist in the employ of the United Fruit Company, came to the company's hospital from the Changuinola River about 7 p. m., September 30. By invitation of Doctor Swigert I saw him the morning of October 1.

The infection in this case was evidently acquired in the town of Bocas del Toro, as the man was taking his meals in a restaurant only a few yards from the house where the third case is living, and was taken sick about three days after leaving the town.

PHILIPPINE ISLANDS.

Report from Manila—Cholera—History and character of the cholera outbreak.

Chief Quarantine Officer Heiser reports, September 4 and 12, as follows:

During the week ended September 2, 1905, the following quarantinable disease was reported for the city of Manila, namely: Cholera, 70 cases, 56 deaths.

The first cases of cholera have been of the most virulent form. Those who have been seized have succumbed in a few hours, and all had the type ordinarily described as *cholera sicca*. The disease has not shown a tendency to localize itself in any one portion of the city, and, so far, there has been no second case to appear in any house in which the disease has been discovered. This would indicate that the disinfecting measures which are being practiced have been effective.

Those portions of the city which are the most crowded, and in which the so-called "slum" population resides, have so far been but slightly invaded. In fact, the disease has appeared sporadically in every portion of the city, and the persons who have been attacked up to the present time have been generally of the better classes. So far, there have been 7 Americans (?) attacked, with 3 deaths; also 6 Europeans, and, in proportion to the population, there have been more cases among the Americans and Europeans than among natives.

There is as yet no exact evidence as to where the disease started. It is known, however, that cases occurred in Taguig and Pateros, which are small villages near Lake Laguna in the interior of Luzon, at least one week before the disease was found in Manila.

Numerous theories have been advanced as to its origin in these places, but no satisfactory conclusions have been reached. Among

others is the fact that the body of a person who died of cholera was exhumed at Pateros shortly before the outbreak. Another is that possibly the conditions of some of the wells near Pateros are such that cholera germs may live in them indefinitely, and, at times, for some unknown reason, assume a virulent form. Many medical men of the islands are now inclined to believe that the disease is indigenous to the Philippines.

One point has been observed which should receive consideration by laboratory workers, and that is that for some time before the outbreak persons died with all the clinical symptoms of cholera, and upon post-mortem examination the bodies presented the gross pathological lesions of the disease, but that no organisms were found at the bacteriological examinations which were made.

The quarantine of interisland vessels has been continued, and it is hoped that it will be effective at least in preventing the spread of the disease to other islands. Army medical officers outside of Manila are cooperating with the Service in maintaining a quarantine inspection of vessels. Major-General Corbin has tendered the services of such army medical officers for this purpose as may be spared.

In view of the experience gained in the last cholera epidemic it was not deemed advisable to institute a land quarantine or to place a cordon around the city of Manila or other infected districts, because the lay of the land is such that to make such a quarantine effective at least 100,000 men would be required. The fact that no such rigid measures have been adopted has been of the greatest assistance to the board of health in gaining the cooperation of the natives.

So far this course has been fully justified, because the disease has not spread to the provinces with anything like the rapidity with which it did in the former epidemic. The only places outside of Manila at which cases have occurred are Pasig, Taguig, Pateros, and Jala Jala in Rizal Province, Malabon in Bulacan Province, and Guagua and San Fernando in Pampanga Province. Total cases in all provinces, 92.

So far, the total number of cases in the provinces has not been as great as that in Manila. The policy of the insular board of health has been to combat the epidemic by a campaign of education rather than by rigid measures. Circulars are being sent out by the bureau of education with instructions that the teachers in the schools in every town and village throughout the Philippine Islands shall teach the contents to their pupils. The board of health likewise sends them to all its officials located in all parts of the islands. In addition to that, the various religious orders are also sending out the circular with the request that its contents be diffused among the people.

The number of cases which occurred in Manila during the week covered by this report was 70; deaths, 56. Total cases since the outbreak on August 23, 1905, 85; deaths, 67.

During the week no vessels cleared for the United States.

Week ended September 9, 1905: Cholera, 78 cases, 69 deaths. The beginning of the week covered by this report marked the day upon which the greatest number of cases occurred at any time during the present epidemic. Twenty-seven cases were reported for Sunday, September 3. Since that day there has been a steady decline until the last day of the week, which shows only 4 cases. With the decline in the number of cases there has been also a marked decrease in the virulence of the disease. No individuals attacked during the week have had the *cholera sicca* type. Most of them had the symptoms of the diarrheic

form described in the text-books. Toward the end of the week very mild cases were encountered, and if it were not for the rice-water stools and the presence of spirilli it would be impossible to make a diagnosis.

On September 6 a telegram was received that a case of cholera had arrived at the port of Sorsogon in the person of the captain of the steamship *Chicago*. This vessel had just undergone five days' quarantine detention at Mariveles, which made it impossible to believe that the diagnosis was correct. Subsequent information demonstrated that the captain probably suffered from ptomaine poisoning caused by eating pork. In view of the facts that the mortality of the disease so far has been over 83 per cent, and that the captain has recovered, it must be concluded that there is strong presumptive evidence that the case was not one of cholera.

There has been a total of 36 cases and 25 deaths reported from Bilibid prison. In view of the fact that the conditions had become alarming the commissioner of public health was directed to assume sanitary control of the entire prison, and he took charge on September 2. As soon as the sanitary measures which were recommended were carried out no further case of cholera occurred.

There has been very little spread of the disease in the provinces. Since the last report there have been reported only 7 additional cases. The disease so far has been confined within a radius of 50 miles of Manila. Total cases in the provinces, 99; deaths, 95.

Total cases in Manila from the beginning of the epidemic to the close of the week covered by this report, 163; number of deaths, 136. Mortality, 83.5 per cent.

During the week the following vessels cleared for ports in the United States:

On September 9, the British steamship *Shimosa*, with 54 crew, en route from Yokohama to New York, was granted a supplemental bill of health; forecastles and storerooms were fumigated with sulphur; crew were inspected on board prior to sailing; 9,050 pieces of miscellaneous cargo certified.

On September 8, the American steamship *Lyra*, with 75 crew, cleared for Tacoma, via Hongkong and Japanese ports; crew's quarters were fumigated with sulphur; crew inspected on board at hour of sailing; 6,554 pieces of miscellaneous cargo certified.

On September 9 the British ship *Scottish Hills* was cleared for the United States via St. Helena for orders. Vessel had been fumigated throughout at Hongkong.

Summary of cholera cases and deaths.

Number of cases and deaths reported in Manila for twenty-four hours ending at 8 a. m. September 15, 1905.

[Report of board of health.]

	Cases.	Deaths.	Recoveries.
August 23 to September 14	171	148	17
Last twenty-four hours	0	1	0
Not previously reported	1	1	1
Total	172	150	18

Last case occurred September 13, 1905. Last death occurred September 14, 1905.

WEST INDIES.

Reports from Barbados—Inspection and fumigation of vessels—Examination of laborers for the Canal Zone—Malarial fever on steamship Yola, from Calabar, British West Africa.

Assistant Surgeon Ward reports, September 20 and 27 and October 4, as follows:

During the week ended September 16, 1905, bills of health were issued to 4 steamships and 2 sailing vessels with 213 crew, 45 cabin and 77 steerage passengers. Of this number I inspected 2 steamships, 102 crew, 11 cabin and 77 steerage passengers. There were 4 crew, 13 cabin and 10 steerage passengers taken on at this port.

On September 12 I viséed the bill of health of the Republic of Panama issued to the Royal Mail steamship *Trent*, bound to Colon, via other ports on the Caribbean Sea, with 163 crew, 24 laborers, and passengers. There were 31 certificates of vaccination issued to deck passengers for Colon and 409 to laborers recruited for work on the Panama Canal.

For the two weeks ended September 16 I examined 390 men, to ascertain their fitness to act as laborers for work on the Panama Canal, and rejected 59.

On September 15 I fumigated to kill mosquitoes all the compartments, including the holds, of the British steamship *Yola* from Calabar, British West Africa, bound to New Orleans, in water ballast, with 34 crew. During the voyage to this port several of the crew had suffered from malarial fever. On arrival one of the men was found to be convalescing; two of the others had temperatures a little above normal, but were otherwise free from any symptoms.

The general health of this island continues good; no quarantinable diseases have been reported.

Yellow fever reported in French Guiana—Malarial and blackwater fever reported in Dutch Guiana.

During the week ended September 23, 1905, bills of health were issued to 1 steamship and 3 sailing vessels with 93 crew, 20 cabin, and 6 steerage passengers. Of this number I inspected 1 steamship, 2 sailing vessels, 80 crew, and 6 steerage passengers. There were 15 cabin and 6 steerage passengers taken on at this port.

It is reported that up to the 16th instant 2 cases of yellow fever had occurred in French Guiana at one of the convict stations along the Maroni River.

From newspaper reports I learn that in Dutch Guiana over 80 per cent of the employees engaged in constructing a railway from the coast to the interior are in hospital suffering from a severe form of fever diagnosed as malaria. Sixteen of these cases are said to be "blackwater fever."

The general health of Barbados continues good. No quarantinable diseases have been reported.

Examination of laborers suspended—Climatic conditions.

During the week ended September 30, 1905, bills of health were issued to 5 steamships with 153 crew and no passengers. Of this

number I inspected 4 steamships and 108 crew. There were 2 crew taken on at this port.

On September 26 I viséed the bill of health of the Republic of Panama issued to the royal mail steamship *Orinoco* bound to Colon, via other ports on the Caribbean Sea, with 133 crew, 24 laborers and passengers. There were 55 certificates of vaccination issued to deck passengers for Colon and 398 to laborers recruited for work on the Panama Canal.

For the week ended September 23 I examined 366 men to ascertain their fitness to act as laborers for work on the Panama Canal and rejected 46. For the present, at least, no further examinations will be made, and no more laborers under contract will be shipped for work on the Canal Zone in view of the departure for Panama of the representative at this port of the Isthmian Canal Commission. It is expected, however, that these shipments will begin again by the first of the year (1906).

During the month of September there were 13 clear and 8 cloudy days with a total rainfall of 19 inches. The maximum temperature for the month was 88° F. on the 10th, the mean 80.5° F., and the minimum 73° F. on the 13th. The average velocity of the wind per hour was 7.49 miles. On the 6th the wind blew from the south at the rate of 36 miles per hour.

The general health of this island continues good; no quarantinable diseases have been reported.

*Report from Castries, St. Lucia Island—Inspection of vessels—
Sanitary conditions good.*

Passed Assistant Surgeon Fricks reports, September 23 and 30, as follows:

Week ended September 23, 1905: Vessels inspected, 5; vessels fumigated, none.

Week ended September 30, 1905: Bills of health issued, 5; vessels fumigated, none.

The sanitary condition of the port continues good.

FOREIGN AND INSULAR STATISTICAL REPORTS OF COUNTRIES AND
CITIES—UNTABULATED.

ARGENTINA—*Buenos Ayres*.—Month of July, 1905. Estimated population, 996,584. Total number of deaths, 1,463, including diphtheria 15, enteric fever 5, measles 5, smallpox 29, and 204 from tuberculosis.

AUSTRIA-HUNGARY—*Brünn*.—Month of August, 1905. Estimated population, 95,342. Total number of deaths, 254, including diphtheria 1, enteric fever 2, whooping cough 6, and 42 from tuberculosis.

BAHAMAS—*Dunmore Town*.—Two weeks ended September 29, 1905. Estimated population, 1,232. No deaths. No contagious diseases.

Governors Harbor.—Week ended October 7, 1905. Estimated population, 1,500. Total number of deaths not reported. No contagious diseases.

Inagua.—Three weeks ended September 22, 1905. Estimated population, 1,800. Three deaths. No contagious diseases.

Nassau.—Two weeks ended October 7, 1905. Estimated population, 12,650. Number of deaths not reported. No contagious diseases reported.

BRAZIL—*Pernambuco*.—Two weeks ended August 31, 1905. Estimated population, 200,000. Total number of deaths, 550, including measles 6, smallpox 283, and 56 from tuberculosis.

CANADA—*British Columbia—Vancouver*.—Month of September, 1905. Estimated population, 40,000. Total number of deaths not reported. One death from enteric fever reported.

CUBA—*Habana*.—Month of August, 1905. Estimated population, 275,000. Total number of deaths, 474, including enteric fever 11, measles 4, scarlet fever 2, whooping cough 1, and 101 from tuberculosis.

Month of September, 1905. Total number of deaths, 511, including diphtheria 2, enteric fever 9, measles 3, scarlet fever 2, and 69 from tuberculosis.

FRANCE—*Roubaix*.—Month of September, 1905. Estimated population, 124,660. Total number of deaths, 151, including measles 2, scarlet fever 1, and 5 from whooping cough.

St. Etienne.—Two weeks ended September 15, 1905. Estimated population, 146,671. Total number of deaths, 124, including enteric fever 3, whooping cough 1, and 22 from tuberculosis.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 76 great towns in England and Wales during the week ended September 16, 1905, correspond to an annual rate of 14.3 per 1,000 of the aggregate population, which is estimated at 15,609,377.

London.—One thousand one hundred and eighty-seven deaths were registered during the week, including measles 7, scarlet fever 8, diphtheria 9, whooping cough 14, enteric fever 9, and 132 from diarrhea. The deaths from all causes correspond to an annual rate of 13.2 per 1,000. In Greater London 1,650 deaths were registered. In the "outer ring" the deaths included 3 from diphtheria, 6 from measles, 6 from whooping cough, and 39 from diarrhea.

Ireland.—The average annual death rate represented by the deaths registered during the week ended September 16, 1905, in the 21 principal town districts of Ireland was 17.2 per 1,000 of the population, which is estimated at 1,093,959. The lowest rate was recorded in Drogheda, viz, 8.2, and the highest in Galway, viz, 35 per 1,000. In Dublin and suburbs 123 deaths were registered, including enteric fever 1, scarlet fever 1, and 27 from tuberculosis.

Scotland.—The deaths registered in 8 principal towns during the week ended September 16, 1905, correspond to an annual rate of 15 per 1,000 of the population, which is estimated at 1,749,917. The lowest rate of mortality was recorded in Perth, viz, 10.7, and the highest in

Glasgow and Leith, viz, 16.6 per 1,000. The aggregate number of deaths registered from all causes was 503, including measles 3, diphtheria 1, scarlet fever 5, and 10 from whooping cough.

MALTA.—Three weeks ended September 16, 1905. Estimated population, 202,405. Total number of deaths 288, including diphtheria 2, and 5 from enteric fever.

SPAIN—*Barcelona*.—Ten days ended September 30, 1905. Estimated population, 600,000. Total number of deaths 374, including enteric fever 13, whooping cough 1, and 39 from tuberculosis.

Cholera, yellow fever, plague, and smallpox, June 30 to October 20, 1905.

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from American consuls through the Department of State, and from other sources.]

[For reports received from December 30, 1904, to June 30, 1905, see PUBLIC HEALTH REPORTS for June 30, 1905.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]
