CHILE.

IQUIQUE—Plague Conditions.

Consul Hanna reports, April 12:

During the three months ended March 31, 1910, there were 69 cases of plague, with 21 deaths at Iquique.

Bubonic plague is endemic at Iquique, the number of cases increasing in the months of March, April, and May, the season of humidity between the hot weather of December, January, and February and the succeeding season of cold weather when the disease again declines. The percentage of deaths from plague is not high except among the poorer classes. Disinfection of infected houses is carried out and effects are burned or disinfected.

Rats are numerous in Iquique, and although measures of extermination are applied on request of householders the construction of the wooden houses in the city prevents an effective campaign for rat destruction.
