PUBLIC HEALTH REPORTS.

Vol. XXV. OCTOBER 14, 1910 No. 41.

CONFERENCES ON EPIDEMIC POLIOMYELITIS AT THE MEETING OF THE AMERICAN PUBLIC HEALTH ASSOCIATION, MILWAUKEE, WIS., SEPTEMBER 5-9, 1910.

By W. H. Frost, Passed Assistant Surgeon, United States Public Health and Marine-Hospital Service.

Although there was no discussion of epidemic poliomyelitis upon the programme of the association, a considerable number of members of the association were sufficiently interested in the subject to meet informally to discuss various aspects of this disease as a public health problem. Two such conferences were held, one on September 8 and one on September 9, attended by representatives from California. Connecticut, Iowa, Maryland, Massachusetts, Minnesota, New Jersey, Pennsylvania, Rhode Island, South Carolina, Virginia, Wisconsin, the District of Columbia, and the Province of Ontario. Poliomyelitis was reported to have been unusually prevalent in all of these districts and epidemic in most of them.

The questions most fully discussed at the conferences were:

1. The advisability of making anterior poliomyelitis a reportable disease. It was unanimously agreed that reports of this disease should be required by law. Of the States represented, Massachusetts, New Jersey, Pennsylvania, Minnesota, and Virginia have already made the

disease reportable.

2. The advisability of quarantining cases. While there were some differences of opinion as to the rigidity of the quarantine which should be enforced, there was a general consensus of opinion to the effect that all cases should be isolated for at least two weeks from the date of onset; that the premises should be placarded; that children known to be in contact with cases of poliomyelitis should be excluded from schools for a period of two or three weeks. Regulations requiring complete family quarantine were considered by most of those present to be impracticable.

3. The disinfection of discharges from the patient. This was unani-

mously recommended.

Other points discussed were the relation of abortive cases and carriers to the spread of epidemics; the effect of climatic and seasonal conditions upon epidemics; the relation of paralysis of animals to human poliomyelitis; the possibility of transmission by insects; the

infectiousness of fomites; the early diagnosis of the disease.

These conferences, as well as conversations with various state health officials actively engaged in the study of epidemic poliomyelitis, proved highly instructive, giving some idea of the extent of prevalence of epidemics of poliomyelitis during the past summer, of the great variations in epidemics as regards virulence and apparent contagiousness, and of the practical difficulties in the way of effectual prevention.

UNITED STATES.

REPORTS TO THE SURGEON-GENERAL, PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE.

PLAGUE-PREVENTION WORK.

Surgeon Blue reports:

ANIMALS EXAMINED FOR PLAGUE INFECTION.

During the week ended September 24, 1910, there were examined for plague infection at the federal laboratory at San Francisco and the branch laboratories at Oakland and Los Angeles, Cal., animals as follows: Squirrels, 3,238; rabbits, 8: gophers, 2; weasels, 1; rats, 2,055. The rats were identified as follows: Mus norvegicus 1,834, Mus rattus 91, Mus alexandrinus 92, Mus musculus 38.

No plague-infected animals were found.

DISTRIBUTION OF POISON.

In connection with the making of a squirrel-free zone around the cities on San Francisco Bay, 1,750 acres of land in Contra Costa County and 44 in San Mateo County were covered with poison during the week ended September 24, 1910.

SEATTLE, WASH.

-Assistant Surgeon Chapin reports:

During the week ended September 24, 1910, 924 rats were collected. Of these 790 were necropsied and examined for plague infection. No plague-infected rats were found.

Cholera in an immigrant.

Doctor Doty, quarantine officer of the port of New York, reports as follows:

The steamship Germania arrived in New York on September 26, having left Naples September 13. One immigrant who had been under treatment en route for malaria was removed September 26 to the quarantine for observation though without symptoms of cholera. These developed, however, after catharsis, and the case resulted fatally September 29. Bacteriological examination of the dejecta demonstrated the cholera bacillus.

a Identified, Mus norvegicus 107, Mus musculus 21. b Identified, Mus norvegicus 627, Mus rattus 1, Mus musculus 85. c Identified, Mus norvegicus 1,211, Mus rattus 90, Mus musculus 323, Mus alexandrinus 92.

STATISTICAL REPORTS OF MORBIDITY AND MORTALITY, STATES AND CITIES OF THE UNITED STATES (untabulated).

CONNECTICUT—Stamford.—Month of September, 1910. Population, 23,000. Total number of deaths from all causes not reported. No deaths from contagious diseases reported. Cases reported: Typhoid fever 1, measles 2, diphtheria 3, tuberculosis 3.

1457 October 14, 1910

FLORIDA.—Week ended October 1, 1910. Reports from the state board of health show typhoid fever present in 2 localities with 4 cases, diphtheria in 1 locality with 1 case, malaria in 9 localities with 24 cases, tuberculosis in 8 localities with 12 cases.

ILLINOIS—Alton.—Month of September, 1910. Population, 17,528. Total number of deaths from all causes 34, including typhoid fever 1, diphtheria 1, tuberculosis 4. Cases reported: Diphtheria 4, scarlet fever 2.

Nebraska—Lincoln.—Month of July, 1910. Population, 65,000. Total number of deaths from all causes 30, including tuberculosis 2. Cases reported: Smallpox 1, measles 4, scarlet fever 8.

Month of August, 1910. Total number of deaths 49, including typhoid fever 2, poliomyelitis 1, tuberculosis 1. Cases reported: Diphtheria 1, scarlet fever 4.

New Jersey.—Month of September, 1910. Population, 1,183,669. Total number of deaths from all causes 3,462, including typhoid fever 50, measles 8, scarlet fever 15, diphtheria 30, tuberculosis 359.

North Carolina.—Month of July, 1910. Reports from the state board of health show smallpox present in 29 counties, typhoid fever in 77 counties, measles in 12 counties, scarlet fever in 17 counties, diphtheria in 31 counties, malarial fever in 14 counties, pernicious malarial fever in 8 counties, hemorrhagic malarial fever in 4 counties, pellagra in 5 counties.

PENNSYLVANIA.—Reports from the state department of health show as follows:

Mortality.—Month of July, 1910. Total number of deaths 10,858, including typhoid fever 80, scarlet fever 65, diphtheria 108, measles 96, whooping cough 156, smallpox 1, influenza 13, malarial fever 4, tuberculosis of the lungs 685 (other organs 135), cancer 416, diabetes 47, meningitis 85, pneumonia 435, diarrhea and enteritis under 2 years 2,719 (over 2 years 227), Bright's disease 411, early infancy 776, suicide 72, accidents in mines and quarries 93, railway injuries 129, other forms of violence 652, all other diseases 3,453.

Morbidity.—Month of August, 1910. Total cases of communicable disease reported 6,958, including anterior poliomyelitis 275, anthrax 2, cerebrospinal meningitis 13, chickenpox 67, diphtheria 834, epidemic dysentery 6, erysipelas 45, German measles 17, hydrophobia 2, malarial fever 13, measles 619, mumps 66, pneumonia 162, puerperal fever 7, scarlet fever 516, smallpox 4, tetanus 19, trachoma 7, tuberculosis 1,274, typhoid fever 1,886, whooping cough 1,124.

VIRGINIA.—Petersburg.—Month of September, 1910. Population 30,000. Total number of deaths from all cases 50, including diphtheria 5, tuberculosis 8. Cases reported: Typhoid fever 18, diphtheria 32, tuberculosis 7.

FOREIGN AND INSULAR.

EMIGRANT INSPECTION AT EUROPEAN PORTS.

Inspection at Glasgow and Southampton.

Assistant Surgeon-General Pettus reports, September 18 and 21:
The United States quarantine laws relative to cholera are enforced at Glasgow. The few Russian emigrants who arrive at that port have been previously detained five days at Antwerp or Rotterdam and their effects have been disinfected. No emigrants from Austria-Hungary or Italy are being carried from Glasgow. Emigrants held in detention for the sailing of the vessel are under medical observation and their effects are again disinfected before embarkation. The detention barracks are ample for the accommodation of the emigrants. The appearance of any suspicious disease among emigrants is required to be promptly reported to the city health authorities.

Russian emigrants to the United States via Southampton arrive from Hamburg. They are required to bring a certificate from the medical officer at the control station on the German-Russian frontier that they harbor no cholera infection and that their effects have been disinfected. Those who do not present this certificate are held five days and their effects are disinfected. The time from the control station to Hamburg is three days, and from Hamburg to Southampton two days. Emigrants held for sailing of vessel are under medical

observation.

Inspection at Marseille and Genoa.

Passed Assistant-Surgeon King reports, September 17:

The consul-general at Marseille has been instructed by the Department of State to disinfect baggage from Russia and to detain all emigrants from Russia in observation for five days before embarkation for the United States. There is only an occasional group of such emigrants, and there is no emigration from Italy via Marseille. Not more than 50 steerage passengers leave Marseille on any one vessel, and these are reinspected at Naples, where the vessels touch thirty-six hours after leaving Marseille. They remain in Naples about two days and are inspected before departure.

There is no emigration from Russia or southern Italy via Genoa to the United States. The emigration by way of Genoa seldom amounts to more than 100 on a vessel, and the emigrants are inspected at Naples. There have been no suspicious cases of disease at Genoa or

in the vicinity.

AUSTRIA-HUNGARY.

VIENNA-Cholera.

The American ambassador reported October 6 to the Department of State:

Official notices dated September 19 and 20 show 16 additional cases of cholera in Hungary. Two new cases are reported in Vienna.

CUBA.

Transmissible diseases in the Republic.

Passed Assistant Surgeon de Valin, at Habana, reports, September 28:

The national sanitary department gives the following statement of transmissible diseases in the Republic:

	Aug	ust 10 to 20	0, 1910.	August 20 to 30, 1910.			
	Cases.	Deaths.	Under treat- ment.	Cases.	Deaths.	Under treat- ment.	
Tuberculosis		60	2,977	49	88	2, 93	
Leprosy Malaria		10	345 135	- 3 - 86	9	344 16	
Typhoid fever	26	ii	108	27	8	100	
Diphtheria Scarlet fever	20	3	17 5	80	6	10	
Measles			75	35	3	60	
Varicella	4		6	3		•	
Tetanus in the new born		7		8	8	• • • • • • • • • • • • • • • • • • • •	
Filariasis Dengue			$\frac{1}{2}$	• • • • • • •			

No quarantinable diseases were reported in the island during the week.

ECUADOR.

Yellow Fever-Increase in Plague.

Passed Assistant Surgeon Parker at Guayaquil reports, September 19:

From September 1 to 15, 1 case of yellow fever was reported in Guayaquil and 1 in Babahoyo. In Duran and Milagro yellow fever

is still present.

During the first fifteen days of the month of September there was a marked increase in the number of plague cases throughout the republic. In the city of Guayaquil there were 26 cases with 14 deaths, on the plantation Matilde there was 1 case, and in Babahoyo 1 case, with 1 case remaining in the plantation Rocafuerte.

Marked rat mortality is observed in Guayaquil.

HAWAII.

Last case of human plague at Honolulu occurred July 12, 1910.

The last plague-infected rat was found at Aiea, 9 miles from Honolulu, April 12, 1910.

At Hilo the last case of human plague occurred March 23, 1910. The last plague-infected rat was found at Piihuona, 4 miles from

Hilo, April 9, 1910.

Passed Assistant Surgeon Ramus reports, September 19:

HONOLULU.

Week ended September 17, 1910.

Total rats and mongoose taken	551
Rats trapped	504
Mongoose trapped	10
Rats found dead	U
Rats shot from trees	37
Examined bacteriologically	472
Plague rats	0

Classification of rats trapped:	
Mus alexandrinus	56
Mus musculus	174
Mus norvegicus	76
Mus rattus	198
Classification of rats shot from trees:	
Mus alexandrinus	
Mus rattus	
Average number of traps set daily	1,738

INDIA.

BOMBAY-Health Conditions.

Consul Dennison reports, September 8:

There were 2 fatal cases of cholera and 1 of smallpox during the week ended September 6. Plague deaths fell to 17, as against 25 in the previous week and a five-yearly average of 29. The corrected death rate of the population was nominally 30.09, but actually probably much less.

CALCUTTA-Cholera, Plague, and Smallpox.

Acting Assistant Surgeon Allan reports, September 8:

During the week ended August 20 there were 12 deaths fron cholera, 12 from plague, and 1 from smallpox in Calcutta; in all Bengal, 69 cases of plague, with 56 deaths; in all India, 1,543 cases of plague, with 1,046 deaths.

ITALY.

Status of Cholera.

Surgeon Geddings, at Naples, reports: Naples, October 2-4, 34 cases cholera, 11 deaths; other parts of Italy, 29 cases, 5 deaths. Naples, October 5-6, 13 cases; other parts of Italy, 18 cases, 5 deaths. Naples, October 7 and 8, 17 cases, 4 deaths; other parts of Italy, 15 cases, 5 deaths. Naples, October 9 and 10, 16 cases, 3 deaths; other parts of Italy, 23 cases, 13 deaths.

Doctor Geddings further reported September 26:

During the week ended September 24 cholera was reported in Italy as follows:

	Cases.	Deaths.
Province of Bari: Barletta	6	4
Molfetta Triggiano	27	6 0
Total	34	10
Province of Foggia: Cerignola Trinitapoli	13	10 5
Total	21	15

It will be seen that the epidemic is on the decrease and that the number of infected localities is gradually diminishing.

Conditions in Naples.

The deaths from gastro-enteritis reported to the municipality have been as follows: September 18, 11; September 19, 3; September 20, 4; September 21, 11; September 22, 44; September 23, 20; September 24, 94.

On September 25, I issued a circular to all steamship companies operating in Naples, informing them that in view of the continued unsatisfactory public health conditions in Naples, it had become necessary to impose the restrictions contemplated by paragraphs 18 to 22 of the quarantine regulations of the United States, and that said restrictions would remain in force until further notice. This circular was promptly acknowledged, and a copy is herewith inclosed for your information.

On September 25 the minister of the interior at Rome made an official declaration of the existence of one case of cholera, confirmed by bacteriological examination, stating in an interview that, while the disease which had been prevailing in Naples was not cholera, it afforded good soil for cholera. At this writing, therefore, Naples is an infected port, and will be so treated in the handling of passengers and merchandise until the wishes of the Surgeon-General in the premises are communicated to me. The measures being enforced are indicated by the circular, to which I again beg to refer. Bills of health hereafter issued will bear the declaration that cholera exists in Naples, unless developments should demand the stronger statement that the disease prevails.

At this time it may be interesting to endeavor to trace the history of this outbreak, in the light of facts as they are now known, subject, of course, to future revision. It is the opinion of many that there have been cases of cholera in the city since August 27-28, when there were 3 deaths in the persons of an old woman and two boys, the boys both dying suddenly and with very suspicious symptoms after a prolonged bath in the stagnant, sluggish water of the port (not the Bay of Naples). The cases were recorded as "gastro-enteritis," which since that time has gradually been on the increase, but the health authorities of the municipality and the kingdom have steadily declared that it was not specific in its nature, was altogether seasonal, and that the mortality from this cause and the total mortality were lower this year during the months of June, July, and August than for five years past.

I have previously alluded to the cases of August 27 and 28, one of an old woman, the other of two boys who had indulged in bathing in the waters of the port or harbor of Naples. There open directly into the harbor two large sewers. These sewers drain a new part of Naples, the Quartiere Orientale, and in this quarter are situated many small hotels and furnished chambers and lodging houses of a poorer class. These sewers may have been contaminated by refugees from Bari and Foggia, or by bacillus carriers from another district, but certain it is, that the old woman above referred to, whose occupation was that of a ragpicker, and who is now said to have picked rags and paper in the neighborhood of the mouth of this sewer, furnished the first case and the first death in Naples, which were followed on the next day by the cases of the two boys of the street-Arab class, who had bathed in the same locality. A case occurred on a ship in the same immediate locality, September 5-6, and since this time the spread

October 14, 1910 1462

of the disease has been gradual but certain. The water of the harbor is believed to be infected. In one corner of this same harbor are beds for the propagation of mussels, a favorite article of food among the lower Neapolitan population. Closely situated to these mussel beds are places for the preservation alive of fish and oysters, where the conditions are little if any better, for they serve as the emptying place for a large sewer which passes through the naval arsenal, with its several thousand employees and workmen. Fish and oysters are very popular articles of food in Naples.

The circular issued to steamship companies was as follows:

Circular.

Naples, Italy, September 25, 1910.

To the representatives of the various steamship companies in Naples.

Gentlemen: The health situation in Naples having continued unsatisfactory, and the disease prevailing having assumed alarming proportions, it becomes necessary to consider the port as infected, and the following precautions as to passengers and freight from Naples to any port or place in the United States will be enforced on and after this date and until further notice:

I. All passengers of the steerage class, originating in Naples, to be considered as coming from an infected district, and to be held under observation upon the quarantine ship *Marsala*, as has been the practice with the passengers from the Provinces of Bari and Foggia.

II. All passengers of the steerage class coming from healthy districts, but embarking in Naples, to be embarked with a minimum of delay in the city, and to be conveyed from trains to inspection shed without communication or stay in the city. It is suggested that all passengers of this class be collected in one large building where they can be under easy and convenient observation.

III. The carrying of foodstuffs of any description upon the person, or in the hands or baggage of such passengers will be strictly prohibited, and all such foodstuffs found as a result of search will be

absolutely confiscated.

IV. Passengers of the first and second cabin classes to be interrogated as to their whereabouts for the five days immediately preceding embarkation, and to be required to present satisfactory evidence that

they have not been exposed to infection.

V. The shipment of merchandise as enumerated in paragraphs 18 to 22, inclusive, of the quarantine regulations of the United States to be forbidden if originating in Naples or in any infected district or if stored in Naples prior to shipment. The classes of merchandise are as follows:

Household goods and personal effects, bedding, second-hand articles in general, unsalted meats, sausages, butter, cheese, fresh and dried fruits, vegetables, rags and textile fabrics used in the manufacture of paper, new feathers for bedding, human hair (unmanufactured), bristles, wool, hides, unless chemically cured; hides, green or unsalted, and any or all articles which the medical officer may consider infected, or as to the origin of which no satisfactory evidence can be produced.

You are requested to acknowledge receipt of the information herein

contained.

NAPLES-Examination of Emigrants.

Doctor Geddings reported September 19: Vessels inspected at Naples and Palermo week ended September 17.

JAPAN.

KOBE-Epidemic Dysentery in Kagawa Prefecture.

Acting Assistant Surgeon Moore reports, September 1 and 7: A serious epidemic of dysentery exists in this prefecture (Kagawa). During the week ended August 27, 438 cases were reported. A total of 2,550 cases with 522 deaths is reported, and the disease is spreading. (Population, 700,402.)

MOROCCO.

Plague.

The Amercian vice consul-general at Tangier reported to the De-

partment of State October 6:

Four deaths from plague have occurred among the French and native troops in camp between Rabat and Casa Blanca. The troops affected are isolated.

RUSSIA.

Status of Cholera.

Acting Assistant Surgeon De Forest, at Libau, reports, September 18:

During the week ended September 16, 359 cases of cholera, with 135 deaths, were reported in the city and suburbs of St. Petersburg. In all Russia, exclusive of St. Petersburg, there were reported during the same period 8,505 cases with 4,051 deaths.

Week ended September 23: In the city and suburbs of St. Petersburg 296 cases of cholera were reported, with 97 deaths. In all Russia, exclusive of St. Petersburg, 6,091 cases, with 3,083 deaths.

LIBAU-Smallpox-Examination of Emigrants.

Doctor De Forest further reports:

During the week ended September 23 one case of smallpox was reported at Libau. There were 2 cases present at close of week. The steamship *Lituania* sailed from Libau September 13 with 1,134 passengers and a crew of 98. All had been in Libau for the full five days required. All had been vaccinated before embarkation. A quarantine of seven days is required for passengers coming from Odessa.

ODESSA-Cholera and Plague.

Consul Grout reports, August 29 and September 19:

Week ended August 27. There were reported 15 new cases of cholera, with 22 deaths, and at the close of the week 25 cases remaining in hospital. Total number of cases from outbreak to August 27, 512; deaths 278.

Week ended September 16. There were reported 18 new cases of cholera, with 9 deaths, and at the close of the week 17 cases remaining in hospital. The total number of cases from outbreak to September 16 was 568; deaths, 239.

Plague.—From the beginning of the outbreak to September 16 there

have been reported 106 cases, with 28 deaths.

SIAM.

BANGKOK-Quarantine Against Singapore.

The American chargé d'affaires reports August 18 through the Department of State:

Quarantine has been declared at Bangkok, by the minister of local government, against Singapore, on account of the existence of smallpox at that port.

CHOLERA, YELLOW FEVER, PLAGUE, AND SMALLPOX.

Reports Received During Week Ended October 14, 1910.
