

PUBLIC HEALTH REPORTS.

Vol. XXVI.

AUGUST 11, 1911.

No. 32.

UNITED STATES.

THE CHOLERA SITUATION.

No case of cholera has developed in the United States, nor has any case arrived at quarantine since those noted in the Public Health Reports of July 28.

BOSTON, MASS.

Examination for Cholera Bacillus Carriers.

Passed Asst. Surg. McLaughlin reports July 29: Bacteriological examination of dejecta of 140 passengers, mostly Russians, from the steamship *Cymric* from Liverpool and Queenstown, which arrived at this port July 27, was negative. To date there have been examined under my supervision 70 specimens from individuals in Boston and 140 from the steamship *Cymric*. One from the city of Boston was positive of cholera. This was in the case of the Italian woman previously reported.¹ Examinations of material from the Italian quarter are being continued.

Dr. McLaughlin further reports August 10:

The steamship *Canopic* arrived August 8 with 100 first-cabin passengers and 395 steerage passengers from the Azores, who were segregated, inspected, and passed. Two hundred and ninety-seven second-cabin passengers were held on board for bacteriologic examination. Eight hundred and ninety-six steerage passengers from Naples were landed on Gallops Island and segregated in five groups. Bacteriologic examination of second-cabin passengers was negative and these passengers were discharged August 9. Bacteriologic examination of steerage passengers, completed 9 a. m., August 10, was negative. The last group was released at 1.30 to-day. The entire transaction occupied 54 hours. Have 10 expert assistants and can handle 1,000 specimens daily.

MUNICIPAL ORDINANCES, RULES, AND REGULATIONS PERTAINING TO PUBLIC HYGIENE.

[Adopted since Jan. 1, 1910.]

WALTHAM, MASS.

MILK—PRODUCTION, CARE, AND SALE.

RULE 1. No person shall sell or distribute milk in the city of Waltham except in accordance with the Revised Laws of Massachusetts, chapter 56, and in the acts which amend the same and the rules adopted by the Waltham board of health.

RULE 2. All persons who wish to engage in the sale, delivery, or distribution of milk in the city of Waltham shall first make application for permission so to do upon blanks provided for that purpose, and annually thereafter on or before March 1, and no license will be issued until all regulations governing the production and care of milk are complied with by the dairies which supply milk to the applicant. Such dairies will be inspected by the board of health of Waltham, and no license will be granted for the distribution or sale of milk which is produced or obtained at any dairy which fails to comply with these regulations or which at any time refuses permission to any inspector of this board to examine into its conditions.

RULE 3. All persons engaged in the sale, delivery, or distribution of milk in the city of Waltham shall file with the board of health, upon proper blanks provided, a list of the dairies or farms, and their location, from which the milk so distributed is obtained, and shall, before making any changes in their supply, notify the board of health in writing of such intended changes. Any person neglecting to comply with this regulation, or who dispenses milk from any dairy whose milk has been excluded from Waltham by this board, shall have his license revoked.

RULE 4. All wagons or other vehicles and utensils used in the conveyance of milk for distribution or sale in Waltham shall be kept at all times in a clean condition and free from offensive odors. Receptacles containing milk shall at all times during transportation be properly covered. Each wagon or vehicle used for the sale, delivery, or distribution of milk shall have the name of the owner, residence, and license number painted thereon. Milk utensils shall not be used for containing any other substances whatsoever.

RULE 5. No certificate will be issued for the sale of milk in any store, shop, market, or bakery or other establishment outside of a properly equipped milk plant, except in properly labeled and stoppered bottles. All milk so kept for sale must be maintained at a temperature below 50° F., in a suitable refrigerator or cooler, properly drained and cared for, and as approved by the board of health. The attendant making a sale of milk may transfer it to a container furnished by the customer at the time of purchase, but no bottle of milk shall be left unstoppered. A special permit must be obtained for the sale of milk from bulk containers to be drunk on the premises.

Milk distributors may obtain permission from the board to deliver milk in bulk containers to boarding houses, restaurants, etc., in sealed cans, but they must first file at the office of the board of health a list of such places, and the said list must be approved by the board of health.

RULE 6. Bottles shall be filled only at a dairy or milk plant, or in such other manner as may be acceptable to the board of health. In no case shall milk bottles be filled from the delivery wagon or from bulk containers, left in places where milk is sold. All milk sold in bottles shall have a properly fitting stopper which shall have stamped thereon the name and license number of the dealer supplying the milk. Milk tickets shall not be used a second time. No can or utensil used to contain milk shall be transported in any vehicle used for conveyance of garbage or other material, or in any other manner liable to cause milk contamination.

RULE 7. No milk bottles shall be removed from any place where scarlet fever, diphtheria, membranous croup, or typhoid fever exists, until such bottles have been thoroughly washed and sterilized by boiling them for 15 minutes, said sterilization to be done by the party using the milk. Any dealer receiving such bottles not so treated, or at any time refilling bottles which have not been to his knowledge properly washed and sterilized, will have his license suspended or revoked.

RULE 8. No milk shall be delivered, held, or offered for sale in Waltham from cows that are either diseased, not properly cared for, or kept in any stable which is not at all times maintained in a clean, wholesome, and sanitary condition; or from

any dairy refusing permission of inspection to the Waltham Board of Health as to the equipment and methods used in producing milk.

The board of health will issue a permit to any dairy wishing to send milk to Waltham after an approved sanitary inspection has been made, and a permanent dairy number will be assigned to each dairy farm, to be used by dealers and this department for purposes of identification.

RULE 9. No milk shall be brought into, held, delivered, or offered for sale in Waltham from cows within fifteen days before or five days after parturition, nor from any cow having any inflammatory disease of the udder.

RULE 10. No person engaged in the business of producing milk to be sold or distributed in Waltham shall store, cool, mix, or strain said milk in any room which is occupied by horses, cows, or other animals, or for the storage of manure, or in any room used in whole or in part for domestic or sleeping purposes, or in any room not satisfactory to the board of health. All rooms in which milk is stored, cooled, mixed, or strained shall be kept clean at all times to the satisfaction of the board of health, and all utensils employed in the storage, sale, or distribution of milk shall be washed with boiling water or sterilized with live steam before they are again used.

RULE 11. No urinal, water-closet, or privy shall be located in the rooms called for in the preceding section, or so situated as to pollute the atmosphere of said rooms. No swine shall be kept within 50 feet of a stable or room in which milk is produced, handled, or stored. Manure shall not be stored in any room where cows are kept, or in other manner liable to contaminate the milk.

RULE 12. All milk produced for distribution or sale in the city of Waltham shall be strained and cooled to 50 degrees Fahrenheit, or lower, as soon as it is drawn, but it shall not be cooled or stored in any well, drinking trough used for watering animals, or in any receptacle located in a barnyard, or other places not approved by the board of health. In handling and storing milk the importance of protecting it from flies shall always be borne in mind and proper screens used for this purpose. No milk shall be held, distributed, or sold in Waltham at a temperature above 50 degrees Fahrenheit.

RULE 13. Every person engaged in the production, storage, transportation, delivery, or distribution of milk to be sold in Waltham shall notify the board of health of Waltham immediately on the occurrence of any case of diphtheria, membranous croup, scarlet fever, or typhoid fever, either in himself or in his family, or amongst his employees or their immediate associates, or within the building or premises where milk is stored, handled, or distributed; and at the same time shall suspend the sale and distribution of milk until authorized to resume the same by the board of health of Waltham.

RULE 14. Every person, firm, or corporation engaged in the sale, delivery, or distribution of milk in the city of Waltham, shall, upon request from the board, certify that the above rules are complied with by their dairies. [Ordinance adopted Aug. 17, 1910.]

SALEM, MASS.

Rules and Regulations of the Board of Health Adopted March 22, 1910.

ENACTING CLAUSE.

The board of health of the city of Salem; in pursuance of the authority conferred on it by the laws of the Commonwealth, hereby makes and publishes, as required by law, the following regulations from Revised Laws, chapter 75, section 65:

SEC. 65. The board of health shall examine into all nuisances, sources of filth, and causes of sickness within its towns. or on board of vessels within the harbor of such town, which may in its opinion be injurious to the public health, shall destroy, remove, or prevent the same as the case may require and shall make regulations for the public health and safety relative thereto and relative to articles which are capable of containing or conveying infection or contagion or of creating sickness which are brought into or conveyed from its town or into or from any vessel. Whoever violates any such regulation shall forfeit not more than one hundred dollars.

CONTAGIOUS DISEASES—NOTIFICATION, DISINFECTION, PLACARDING, ISOLATION, SCHOOL ATTENDANCE, VACCINATION OF SCHOOL CHILDREN.

REG. 1. Whereas in addition to the diseases mentioned by name in the Revised Laws, chapter 75, section 49 (see below), the diseases of membranous croup, typhoid fever, typhus fever, and cholera are infectious or contagious diseases dangerous to the public health, every household who knows that a person within his family or house is sick of any of said diseases shall immediately give notice thereof to this board, and upon the death, recovery, or removal of such person shall disinfect to the satisfaction

of this board such of the rooms of said house and such of the articles therein as in the opinion of this board have been subjected to infection or contagion.

REG. 2. Sections 49 and 50 of chapter 75 of the Revised Laws, as amended by chapter 25 of the Acts of the year 1905, and section 52 of chapter 75 of the Revised Laws, have been amended by chapter 480 of the Acts of the year 1907, so that the same now read as follows:

SEC. 49. A householder who knows that a person in his family or house is sick of smallpox, diphtheria, scarlet fever, or any other infectious or contagious disease declared by the State board of health to be dangerous to the public health shall forthwith give notice thereof to the board of health of the city or town in which he dwells. Upon the death, recovery, or removal of such person, the householder shall disinfect to the satisfaction of the board such rooms of his house and articles therein as in the opinion of the board have been exposed to infection or contagion. Should one or both eyes of an infant become inflamed, swollen, and red, and show unnatural discharge at any time within two weeks after its birth, it shall be the duty of the nurse, relative, or other attendant having charge of such infant to report in writing within six hours thereafter, to the board of health of a city or town in which the parents of the infant reside, the fact that such inflammation, swelling, and redness of the eyes and unnatural discharge exist. On receipt of such report, or of notice of the same symptoms given by a physician as provided by the following section, the board of health shall take such immediate action as it may deem necessary in order that blindness may be prevented. Whoever violates the provisions of this section shall be punished by a fine of not more than one hundred dollars.

SEC. 50. If a physician knows that a person whom he is called to visit is infected with smallpox, diphtheria, scarlet fever, or any other disease declared by the State board of health to be dangerous to the public health, or if one or both eyes of an infant whom or whose mother he is called to visit become inflamed, swollen, and red, and show an unnatural discharge within two weeks after the birth of such infant, he shall immediately give notice thereof in writing over his own signature to the selectmen or board of health of the town; and if he refuses or neglects to give such notice, he shall forfeit not less than fifty nor more than two hundred dollars for each offense.

SEC. 52. If the board of health of a city or town has had notice of a case of smallpox, diphtheria, scarlet fever, or of any other disease declared by the State board of health to be dangerous to the public health therein, it shall within twenty-four hours thereafter give notice thereof to the State board of health stating the name and the location of the patient so afflicted, and the secretary thereof shall forthwith transmit a copy of such notice to the State board of charity.

At a meeting of the State board of health, held August 1, 1907, the following diseases were declared to be "dangerous to the public health," and hence notifiable under the provisions of the above sections:

Actinomycosis, Asiatic cholera, diphtheria, cerebro-spinal meningitis, glanders, leprosy, malignant pustule, measles, ophthalmia neonatorum, scarlet fever, smallpox, tetanus, trichinosis, tuberculosis, typhoid fever, varicella, typhus fever, whooping cough, yellow fever.

Attention is further called to the fact that having been directed by chapter 183 of the acts of the year 1907 to define what diseases shall be deemed to be "dangerous to the public health," as the term is used in chapter 213 of the acts of the year 1902, entitled "An act relative to compensating cities and towns for caring for persons infected with the smallpox or other diseases dangerous to the public health," the State board of health, at a meeting held August 1, 1907, voted to define as "dangerous to the public health," within the meaning of said chapter 213 of the acts of the year 1902, the following diseases:

Actinomycosis, Asiatic cholera, cerebro-spinal meningitis, diphtheria, glanders, leprosy, malignant pustule, measles, scarlet fever, smallpox, tuberculosis, typhoid fever, typhus fever, whooping cough, yellow fever.

REG. 3. Upon every house in which there is a person sick of diphtheria, membranous croup, or scarlet fever shall be placed a placard with the name of the disease. This placard shall not be defaced or removed by any person without authority of the board of health.

REG. 4. Whoever is infected with smallpox, scarlet fever, diphtheria, or membranous croup shall immediately proceed to some isolated place or room designated by the board of health, and no person who has been so affected shall leave such place or room and no articles shall be removed from such place or room until the board of health shall certify in writing that all danger of communicating such disease to others is passed.

REG. 5. Every parent or guardian of any child or ward infected with smallpox, scarlet fever, diphtheria, or membranous croup shall immediately cause such child or ward to be conveyed to some isolated place or room approved by the board of health, and no parent or guardian shall permit such child or ward to remove from such place or room until the board of health shall find and certify in writing that all danger of communicating such disease to others has passed.

REG. 6. No person other than the attending physician, nurse, and agents of the board of health shall enter, nor shall any dog, cat, or other animal be allowed to enter any apartment or other place set apart for the treatment of smallpox, scarlet fever, diphtheria, or membranous croup until the board of health shall certify in writing that such apartment or place has been satisfactorily disinfected.

REG. 7. No person having the care of any other person who has been affected with smallpox, scarlet fever, diphtheria, or membranous croup shall advise or permit such other person to leave any place designated by the board of health as a place of

isolation of such infected person before said board of health shall have certified in writing that such person can leave such designated place without danger to others.

REG. 8. No physician who has been in attendance upon any person who has been infected with smallpox, scarlet fever, diphtheria, or membranous croup shall advise or knowingly permit such person to leave any place designated by the board of health as a place of isolation of such infected person before said board of health shall have certified in writing that such infected person can leave such place without danger to others.

REG. 9. No person shall remove or permit to be removed from any house upon which a placard has been placed, as provided in regulation 3, any clothing, books, or other property without a permit from the board of health; nor after a house is established as a hospital under the provisions of chapter 75 of the Revised Laws shall any occupant of such house take up a residence elsewhere without such permit. No public or circulating library book nor any schoolbook shall be taken into any house or apartment whereon a placard has been placed as provided in regulation 3 before the authorized removal of said placard.

REG. 10. Before the card shall be removed from a house in which there is a case of diphtheria, or the restrictions placed upon intercourse between the inmates of such houses and others relaxed or removed, a culture shall be taken from the throat of each patient surviving and a report received that such culture does not show the presence of the bacillus of diphtheria, and a second such culture and report also may be required if the chairman or clerk of the board shall so determine.

REG. 11. No person living in a house or interior apartment upon which a placard has been placed, as provided in regulation 3, shall attend or visit any school in the city without a permit from the board of health.

(Extract from the Revised Laws, chap. 44, sec. 6, concerning contagious diseases.)

Revised Laws, chapter 44, section 6, as amended by statute, 1907, chapter 215, is as follows:

A child who has not been vaccinated shall not be admitted to a public school except upon presentation of a certificate granted for cause stated therein, signed by a regular practicing physician, that he is not a fit subject for vaccination. A child who is a member of a household in which a person is ill with smallpox, diphtheria, scarlet fever, measles, or any other infectious or contagious disease, or of a household exposed to such contagion from another household, as aforesaid, shall not attend any public school during such illness until the teacher of the school has been furnished with a certificate from the board of health of the city or town, or from the attending physician of such person, stating that danger of conveying such disease by such child has passed.

REG. 12. No person who has visited a house in which there was at the time a case of smallpox, diphtheria, scarlet fever, or membranous croup shall attend any school until after the teacher of the school has been furnished with a certificate from the board of health of the city or town or from a regular physician, stating that danger of conveying such disease by such child has passed.

The board of health desires to call attention to the hospital for contagious diseases. Its use as a means for the sanitary welfare of our citizens is strongly urged. [Regulation board of health, adopted Mar. 22, 1910.]

PLAGUE-PREVENTION WORK.
INFECTED GROUND SQUIRRELS.

During the week ended July 8, 1911, the finding of 4 plague-infected ground squirrels was reported. The squirrels were found as follows: In Contra Costa County, Cal., at Kavanaugh ranch, 1½ miles southwest of Pinole, June 21, 2 squirrels, and June 23, 1 squirrel; in San Joaquin County, Cal., at E. D. Moulton ranch, 1 mile northwest of Ripon, June 22, 1 squirrel.

During the week ended July 15, 1911, the finding of 3 plague-infected squirrels was reported. The squirrels were found as follows: In Contra Costa County, Cal., at Juan Fernandez ranch, 1 mile south of Pinole, June 29, 2 squirrels; in San Joaquin County, Cal., at E. D. Moulton ranch, June 29, 1 squirrel.

DISTRIBUTION OF POISON.

In connection with the making of a squirrel-free zone around the cities of California on San Francisco Bay, 3,035 acres of land in Alameda County and 1,443 acres in Contra Costa County were covered with poison during the week ended July 8, 1911.

During the same period 170 acres of land in Merced County and 170 in San Benito County were covered with poison for the purpose of eradicating plague foci.

During the week ended July 15, 1911, 3,425 acres of land in Alameda County and 1,788 acres in Contra Costa County were covered with poison in connection with the making of a squirrel-free zone around the cities on San Francisco Bay, and 210 acres in Merced County for the purpose of eradicating plague foci.

SMALLPOX IN THE UNITED STATES.

In the following tables the States indicated by an asterisk are those from which reports of smallpox are received only from certain city, and in some cases county, boards of health. In these States, therefore, the recorded cases and deaths should not be taken as showing the general prevalence of the disease. In the States not marked by an asterisk the reports are received monthly from the State boards of health and include all cases reported throughout the State.

Reports Received During Week Ended Aug. 11, 1911.

Places.	Date.	Cases.	Deaths.	Remarks.
Arizona:				
Counties—				
Cochise.....	July 1-31.....	1

STATISTICAL REPORTS OF MORBIDITY AND MORTALITY, STATES AND CITIES OF THE UNITED STATES (untabulated).

CONNECTICUT—*Stamford*.—Month of July, 1911. Population, 25,138. Total number of deaths from all causes not reported. Cases reported: Diphtheria 2, scarlet fever 2, tuberculosis 2.

FLORIDA.—Week ended July 22, 1911. Reports from the State board of health show diphtheria present in 1 locality (Ibor City), with 1 case, malaria in 4 localities with 28 cases, smallpox in 4 counties with 6 cases, tuberculosis in 5 localities with 8 cases, typhoid fever in 6 localities with 14 cases.

IOWA.—Month of June, 1911. Population, 2,224,771. Total number of deaths from all causes, 1,515, including diphtheria 5, measles 5, scarlet fever 5, smallpox 1, tuberculosis 127, typhoid fever 10.

MICHIGAN.—Month of June, 1911. Population, 2,810,173. Total number of deaths from all causes, 2,601, including diphtheria 16, measles 17, scarlet fever 13, tuberculosis 227, typhoid fever 33. Cases reported: Diphtheria 201 in 41 localities, measles 257 in 49 localities, scarlet fever 282 in 60 localities, smallpox 38 in 14 localities, tuberculosis 159, typhoid fever 96.

NEW JERSEY.—Month of July, 1911. Population, 2,537,167. Total number of deaths from all causes, 2,706, including diphtheria 33, measles 19, scarlet fever 24, tuberculosis 335, typhoid fever 16.

NEW YORK—*Rome*.—Month of July, 1911. Population, 20,497. Total number of deaths from all causes, 33. No deaths from contagious diseases. Cases reported: Diphtheria 4, measles 42, scarlet fever 2, tuberculosis 1, typhoid fever 1.

TEXAS.—Month of May, 1911. Population, 3,896,542. Total number of deaths from all causes, 2,664, including diphtheria 7, measles 49, scarlet fever 18, smallpox 4, tuberculosis 321, typhoid fever 71. Cases reported: Diphtheria 33, measles 19, scarlet fever 123, smallpox 128, tuberculosis 83, typhoid fever 123.

FOREIGN AND INSULAR.

AUSTRIA.

Trieste—Cholera.

The American vice consul reports August 7:
From August 1 to date 22 cases of cholera, with 2 deaths, were reported.

Cholera Bacillus Carriers.

The following information was taken from the *Oesterreichische Sanitätswesen* July 6 and 13, 1911:

At Trieste a healthy cholera bacillus carrier was found June 3 among the passengers from the steamship *Oceania* who were detained at the maritime lazaretto, and on July 4, 2 healthy carriers were found in the same group. Later 4 healthy carriers were found among the passengers of the *Oceania* and 3 among the crew. They were isolated and placed under observation.

BULGARIA.

Cholera—Quarantine Measures.

The following information was received July 8, from the ministry of foreign affairs at Sofia:

A fatal case of cholera occurred June 20 in the district of Choumen. The patient arrived at Varna June 18 from Asiatic Turkey on the steamship *Cyrille*. The case was bacteriologically verified. All necessary measures were taken to prevent spread of the disease and all contacts were placed under observation. No further case has developed.

The ministry of the interior in a decree dated June 25 declared the coast of Asiatic Turkey to be cholera-infected and directed the regulations of the maritime service for the prevention of importation of cholera to be put in force with regard to travelers and merchandise from ports on the said coast.

CHINA.

Amoy—Cholera and Plague.

Acting Assistant Surgeon Bonthius reports June 30:

During the week ended June 25, 5 cases of cholera and 18 cases of plague were reported.

Hongkong—Plague—Plague Rats.

Surg. Brown reports June 29:

During the week ended June 24, 25 cases of plague with 8 deaths were reported. The number of rats taken was 1,632, of which 24 were found to be plague infected.

CUBA.

Quarantine against Cholera.

A decree was issued July 14 by the President of the Republic declaring all Cuban ports except Habana closed to emigration from Italy and prescribing strict quarantine for all third-class passengers arriving from Italy, directly or indirectly, and the disinfection of passengers' baggage and of merchandise.

FRANCE.

Marseille—Cholera.

Consul General Gaulin reports August 10:

From August 8 to 10, 6 cases of cholera with 2 deaths were officially reported at Marseille.

GREECE.

Cholera.

Consul General Gale, at Athens, reports July 8:

A fatal case of cholera occurred July 5 on a German vessel in the harbor of Laurium in the Province of Attica. The vessel had called at Naples. The patient was a member of the crew. Information has been received of the presence of 3 cases of cholera at Laurium.

Consul General Gale further reported August 4:

Cholera has appeared at the quarantine station at Piraeus. Strict isolation is maintained.

Cerebrospinal Meningitis.

Consul General Gale reports June 16:

Cases of cerebrospinal meningitis continue to occur in different parts of the country but the disease appears to be no longer epidemic.

HAWAII.

Record of Plague Infection.

The last case of human plague at Honolulu occurred July 12, 1910.

The last plague-infected rat was found at Aiea, 9 miles from Honolulu, April 12, 1910.

At Hilo the last case of human plague occurred March 23, 1910. A fatal case occurred at Honokaa, 60 miles from Hilo, December 17, 1910; 2 fatal cases were reported January 31, 1911, and 1 fatal case was reported April 19.

The last plague-infected rat was found at Honokaa February 2, 1911. A plague-infected rat was found at Hilo during the week ended June 10, 1911.

Chief Quarantine Officer Ramus reports, July 17:

HONOLULU.

Week ended July 15, 1911.

Total rats and mongoose taken.....	783
Rats trapped.....	754
Mongoose trapped.....	29
Examined bacteriologically.....	684

Classification of rats trapped:

<i>Mus alexandrinus</i>	70
<i>Mus musculus</i>	318
<i>Mus norvegicus</i>	61
<i>Mus rattus</i>	299
Average number of traps set daily.....	1,720

INDIA.

Calcutta—Cholera and Plague.

Acting Assistant Surgeon Allan reports July 6:

During the week ended June 17, 42 deaths from cholera and 49 from plague were reported at Calcutta; in all Bengal, 102 cases of plague with 85 deaths; in all India, 3,744 cases of plague with 3,285 deaths.

ITALY.

Status of Cholera.

Surg. Geddings, at Naples, reports:

From July 17 to 21, inclusive, cholera was reported in Italy as follows: Naples city, 87 cases with 18 deaths; Naples Province, 155 cases with 56 deaths; rest of continental Italy, 85 cases with 35 deaths; Palermo city, 138 cases with 98 deaths.

July 22 to 26: Naples city 68 cases with 20 deaths; Naples Province 148 cases with 74 deaths; rest of continental Italy 130 cases with 51 deaths; Palermo city 100 cases with 32 deaths; Palermo Province 75 cases with 35 deaths; rest of Sicily 32 cases with 10 deaths. Cholera is spreading at Genoa and Leghorn.

Naples—Examination of Emigrants.

Dr. Geddings further reports: Vessels inspected at Naples during the week ended July 15:

NAPLES.

Date.	Name of ship.	Destination.	Steerage passengers inspected and passed.	Pieces of baggage inspected and passed.	Pieces of baggage disinfected.
July 12	Carpathia.....	New York.....			
12	Citta di Palermo.....	New Orleans.....			
13	Oceania.....	New York.....	362	85	590
14	Berlin.....	do.....	455	90	620
15	Verona.....	Philadelphia..	290	105	580
	Total.....		1,107	280	1,790

Rejections recommended.

Second class baggage inspected and disinfected at Naples.

Date.	Name of ship.	Pieces of baggage inspected and passed.	Pieces of baggage disinfected.
July 12	Carpathia.....	35	65
12	Citta di Palermo.....		
13	Oceania.....	15	24
14	Berlin.....	90	280
15	Verona.....	40	95
	Total.....	180	464

Additional Vessels Sailing from Naples.

Dr. Geddings further reports:

On July 29 the steamship *Venezia Sangiovanni* sailed for New York, and on August 2 the steamship *Duca degli Abruzzi*, August 3 the *Re d'Italia*, August 4 the *Konig Albert*, for New York.

MEXICO.**Epidemic Smallpox at San Juan Bautista.**

Consul Lespinasse, at Frontera, reports July 16:

The epidemic of smallpox at San Juan Bautista continues but mortality from the disease is decreasing.

Yellow Fever at Merida; None at Progreso.

The American consul at Progreso reported August 8 the presence of 2 cases of yellow fever at Merida. On August 10 the consul further reported that no new cases had occurred at Merida and that there was no yellow fever present at Progreso.

SERVIA.**Quarantine Against Cholera.**

The following notice, dated June 20, was received from the minister of the interior at Belgrade:

In view of the fact that the existence of the cholera epidemic has been proven at Constantinople and along the coast of the Turkish Empire, and in Italy in the Provinces of Naples, Caserta, and Salerno, and in the cities of Naples, Montereale, and Palermo, we declare all these regions and cities to be infected with cholera, in conformity with article 10 of the convention of Paris and with articles 1, 3, 4, and 33 of the law for the sanitary organization of our country.

Dating from to-day all the measures provided by the regulations for combating the cholera will be applied as to travelers, baggage, and merchandise coming from these regions. We give notice hereby to the inhabitants of Belgrade, as well as to travelers, and we urge upon the competent authorities to see to the rigorous observation of the regulations and orders above mentioned.

TRINIDAD.**Port of Spain—Examination of Rats.**

The following information was taken from the report of the colonial surgeon general:

During the two weeks ended July 14, 1911, 2,072 rats were examined for plague infection. Of this number 440 were *Mus norvegicus*, 217 *Mus rattus*, and 1,415 *Mus musculus*. No plague-infected rats were found.

VENEZUELA.

Plague and Yellow Fever.

Acting Asst. Surg. Stewart at La Guaira reports July 25:

During the week ended July 6, 1 case of plague and 1 case of yellow fever were reported at Caracas.

During the two weeks ended July 23, 1 case of plague and 2 cases of yellow fever with 1 death were reported at Caracas. At Maiquetia, a suburb of La Guaira, 2 cases of yellow fever were reported July 22.

CHOLERA, YELLOW FEVER, PLAGUE, AND SMALLPOX.

Reports Received During Week Ended Aug. 11, 1911.

[These tables include cases and deaths recorded in reports received by the Surgeon General, Public Health and Marine-Hospital Service, from American consuls through the Department of State and from other sources.]
