

PUBLIC HEALTH REPORTS

VOL. 35

SEPTEMBER 3, 1920

No. 36

CONFERENCE ON PLAGUE SITUATION.

SPECIAL CONFERENCE OF STATE AND TERRITORIAL HEALTH AUTHORITIES WITH THE UNITED STATES PUBLIC HEALTH SERVICE.

Upon telegraph request of five State boards of health and under authority of section 7 of the act of Congress approved July 1, 1902, a special conference relative to the plague situation was held at Galveston and Beaumont, Tex., August 3 and 4, 1920. In addition to the usual invitation extended to all States to send delegates to the conference, a special invitation was extended, through State health officers, to seaports to have representatives present at the conference as guests.

Surg. Gen. Hugh S. Cumming presided over the session held on August 4, but was unable to be present at the opening session, which was accordingly called to order by Asst. Surg. Gen. A. J. McLaughlin. The conference opened at 10 o'clock a. m., August 3, 1920, at the Hotel Galvez, Galveston, Tex.

The following persons were present during the conference:

State.

Delegates and guests.

Alabama.....	Dr. S. W. Welch, State health officer. Dr. C. A. Mohr, county health officer, Mobile County.
Arkansas.....	Dr. C. W. Garrison, State health officer.
California.....	Dr. L. M. Powers, health commissioner, Los Angeles.
Connecticut.....	Dr. John T. Black, State health commissioner.
Florida.....	Dr. Ralph N. Greene, State health officer.
Georgia.....	Dr. W. F. Brunner, city health officer, Savannah.
Iowa.....	Dr. G. H. Sumner, State health commissioner.
Illinois.....	Dr. C. St. Clair Drake, State health commissioner.
Kansas.....	Dr. S. J. Crumbine, secretary State board of health.
Kentucky.....	Dr. A. T. McCormack, State health officer. Dr. J. G. South, president State board of health.
Louisiana.....	Dr. Oscar Dowling, State health officer.
Massachusetts.....	Dr. Eugene R. Kelley, State health commissioner. Hon. James McPherson, mayor of Beverly. Dr. C. H. Phillips, health officer, Beverly. Dr. W. C. Woodward, health commissioner, Boston. Dr. Philip Castleman, Boston. Mr. Herbert A. Wilson, building commissioner, Boston.

*State.**Delegates and guests.*

Mississippi.....	Dr. C. M. Shipp, chief sanitary inspector, State board of health.
New Jersey.....	Dr. R. B. Fitz Randolph, assistant director, State board of health
Ohio.....	Dr. F. G. Boudreaux, director of division of communicable diseases, State department of health.
Pennsylvania.....	Dr. E. B. Crumbar, State department of health. Dr. C. Y. White, department of health, Philadelphia.
South Carolina.....	Dr. James A. Hayne, State health officer. Dr. J. Mercier Green, city health officer, Charleston.
Texas.....	Dr. Oscar Davis, assistant health officer. Dr. H. C. Hall, special plague commissioner, Beaumont. Dr. M. D. Levy, plague work, special assignment. Dr. V. M. Ehlers, State sanitary inspector. Dr. A. H. Flickwir, city health officer, Houston. Dr. W. S. Carter, dean of medical department of University of Texas, Galveston. Miss Edith Lotz, bacteriologist, Houston. Dr. W. E. Wills, city health officer, Corpus Christi. Dr. Davis S. Reid, city health officer, Port Arthur. Hon. Trinn, Port Arthur. Dr. E. E. Dickason, city health officer, Brownsville. Dr. E. L. Cox, county health officer, Galveston County. Dr. W. L. Hoecker, city health officer, Galveston. Dr. H. M. Austin, city health officer, Laredo. Dr. H. N. Herndon, rat-proofing ordinances, Dallas.
Virginia.....	Dr. C. C. Hudson, city health officer, Richmond. Mr. E. M. Strauss, bacteriologist, State department of health.
District of Columbia.	Dr. W. C. Fowler, health officer.

Representatives of the Public Health Service.

Surg. Gen. Hugh S. Cumming, Washington, D. C.
 Asst. Surg. Gen. A. J. McLaughlin, Washington, D. C.
 Surg. B. J. Lloyd, Washington, D. C.
 Passed Asst. Surg. J. Holmes Smith, jr., officer in charge, Galveston, Tex.
 Passed Asst. Surg. H. F. White, Beaumont, Tex.
 Passed Asst. Surg. (R) Mark F. Boyd, Galveston, Tex.
 Passed Asst. Surg. W. F. Fox, Galveston, Tex.
 Passed Asst. Surg. R. M. Grimm, Galveston, Tex.

At the opening of the conference Dr. McLaughlin compared the general situation in Galveston and Beaumont. He pointed out that in Beaumont there had been a great amount of work accomplished in the elimination of rat harborages, but that the rat catch in Galveston was probably more satisfactory because of the large number of rats trapped, especially the high percentage of Norway rats.

Dr. Oscar Davis, of the State health department of Texas, expressed the appreciation of that State for the work done by the United States Public Health Service and the municipal authorities in taking hold of the plague situation in Texas.

Dr. H. C. Hall, special plague commissioner, Beaumont, Tex., gave a brief history of the cases of plague which had occurred in Beaumont.

Dr. H. F. White, passed assistant surgeon, United States Public Health Service, emphasized the importance of a thorough knowledge of the habits of rats in order to carry into effect efficient control measures. In his discussion, he spoke in part as follows:

"In the Southern United States there are several kinds of rats: The Norway rat, the *rattus* and the *alexandrinus*, which, for all practical purposes, may be classed as one species, and the mouse and some four or five other species found in the suburban or rural districts and usually grouped under the general term of 'wood rats.' On account of their even distribution and the fact that they do not colonize or form large rat centers, and also that they are not found in habitation of man, the wood rats are of minor consideration in plague-preventive measures.

"The Norway species (brown or gray rat) is essentially a burrowing animal, living chiefly under floors and in cellars. This species is more readily trapped than the others, and because of its burrowing habits, rat-proofing measures are most effective against this species. On the other hand, the *rattus* and *alexandrinus* do not burrow and in the United States live almost exclusively indoors, within loosely piled material, merchandise, hollow spaces, and are most often found overhead. They are notoriously trap shy, but snap traps placed on beams and in similar overhead runways will prove very effective. It naturally follows that rat catching and rat proofing are of less value against the *rattus* and *alexandrinus*, and experience has demonstrated that a building absolutely rat proof, as far as construction is concerned, will harbor, when filled with stored material, an immense number of these species. Fumigation (preferably by cyanide gas) is the effective measure to be employed against the *rattus* and *alexandrinus*.

"With trapping and rat proofing alone, it necessarily follows that there will be a much greater decline in the Norway rat than in the *rattus* and *alexandrinus*, and, with the destruction of the larger species, the mouse population will multiply, as evidenced by the tremendous increase in the mouse catch. It can generally be definitely stated that the situation is growing better when this occurs.

"While rats are often found in large numbers in ships, they are not found in large numbers in freight cars, at least in this country. In the United States, this condition of affairs can be attributed to the fact that there is here a comparatively small number of the *rattus* and *alexandrinus*. These species constitute somewhat more than 95 per cent of all rats taken from ships, the brown rat being only occasionally observed. The *rattus* and *alexandrinus* really constitute the tourist element in rodent population, and it is because of their comparative scarcity in the United States that the transportation of plague rats in freight cars has never been observed in this country. The daylight loading of freight cars and the prohibiting of cars from standing open alongside of loading platforms during the night would seem to embrace all reasonable precautionary measures to prevent the spread of plague in overland carriers."

Dr. White also emphasized the importance of proper and careful tagging of rats, and cited his method of rat-trapping. He reported the occurrence of 11 cases of human plague in Beaumont, three of which were of the fulminating type.

Dr. Eugene R. Kelley, State health commissioner of Massachusetts, suggested that a definite method of control and prevention adaptable to this country be determined.

Dr. J. Mercier Green, city health officer, Charleston, S. C., asked that the rat survey, when started, include inland States.

Dr. Oscar Dowling, president, State board of health, Louisiana, gave a short talk on a rat survey made of New Orleans some years ago.

Dr. M. D. Levy, Beaumont, Tex., discussed briefly the various cases of plague which had come under his observation.

Before leaving Galveston, those present at the conference inspected the methods in force in that city for the eradication of plague. The following day the representatives proceeded to Beaumont, making a similar inspection of that city and holding a final session of the conference. At this session the following resolutions were adopted:

Resolved, That the State and municipal health officials, now in session in Beaumont and having visited the City of Galveston, and having had in these two cities the opportunity of making a thorough study of existing plague conditions, do hereby express to the State health officer of Texas and his associates our approval and indorsement of the prompt and efficient measures adopted for the suppression of this serious disease; and be it further

Resolved, That a vote of thanks be extended to the Surgeon General of the United States Public Health Service, to his officers and coworkers for their immediate and effective response to appeal for help from Texas and other affected communities; and be it further

Resolved, That the people of Texas and other affected States be informed that legislative action to secure liberal appropriations for antiplague work is an urgent and imperative necessity; and be it further

Resolved, By this Special Conference of Federal, State, and Municipal Health Authorities on the bubonic plague situation, that a nation-wide effort should be made at the present time to determine as accurately as possible the presence or absence of rodent plague in all ports of entry and principal centers of railway freight transportation in the United States; and be it further

Resolved, That in order that such investigative work and the concomitant preventive measures against the spread of rodent plague shall be carried out in a concertedly effective manner, that the Surgeon General of the United States Public Health Service be requested to send out to all State Governments suggestions as to the most efficient eliminative method of carrying on rat surveys and the most practical manner of permanent plague prevention; and be it further

Resolved, That the present serious, even though not alarming, bubonic plague situation in the Southern States should be the occasion for inaugurating a nation-wide campaign against rodents on economic as well as public health grounds.

DIVISION OF VENEREAL DISEASES, JUNE, 1920.

The accompanying table shows that during the month of June, 1920, 25,450 cases of venereal diseases were reported to the State boards of health by physicians, clinicians, hospital superintendents, etc., and that there were 12,149 new admissions to the clinics operating under the joint control of the United States Public Health Service and the State boards of health.

There were 30,730 doses of arsphenamine administered during the month.

The reports from four States were received too late to be included.

Venereal disease reports for June, 1920: Number of cases reported by the State boards of health, number of admissions to the venereal-disease clinics operating under joint control of United States Public Health Service and State boards of health, and number of treatments of arsphenamine administered.

State.	Cases reported.				Admissions to clinics.				Arsphenamine treatments administered.

SUMMARY OF CASES REPORTED MONTHLY BY STATES.

Tables showing by counties the reported cases of cerebrospinal meningitis, influenza, malaria, pellagra, poliomyelitis, smallpox, and typhoid fever are published under the names of these diseases. (See names of these and other diseases in the table of contents.)

The following monthly State reports include only those which were received during the current week. These reports appear each week as received.

State.	Cerebrospinal meningitis.	Diphtheria.	Influenza.	Malaria.	Measles.	Pellagra.	Poliomyelitis.	Scarlet fever.	Smallpox.	Typhoid fever.

† Population Apr. 15, 1910.

FOREIGN AND INSULAR.

AUSTRALIA.

Influenza—Sydney.

Influenza was reported present at the port of Sydney, Australia, during the period June 9 to July 10, 1920.

DANZIG.

Delousing—Disinfection.

On July 7, 1920, 2,116 Polish-American troops of Haller's Army were embarked for the United States on the United States Army transport *Princess Matoika*. These troops were deloused and held in quarantine for 13 days prior to departure. Their clothing and effects were disinfected with steam.

FRANCE.

Bubonic Plague—Paris.

Under date of August 19, 1920, bubonic plague was unofficially reported present in Paris, there having been 20 cases up to that date, scattered over a wide district of the city. The presence of plague there is not of the same significance or concern as it would be if Paris were a seaport.

JAMAICA.

Infectious Disease Reported Prevalent.

On August 20, 1920, the prevalence of a disease resembling varioloid was reported present in the island of Jamaica, with 300 reported cases.

NEW ZEALAND.

Influenza—Pneumonic.

During the week ended July 26, 1920, 26 cases of pneumonic influenza were reported in New Zealand.¹

POLAND.

Smallpox—January, 1920.²

Smallpox was reported prevalent in Poland during the month of January, 1920, among the military and in the civil population on the eastern frontier. Of the 1,895 reported cases with 301 fatalities, 1,052 cases with 228 fatalities were reported in the district of Minsk.

¹ Public Health Reports, July 2, 1920, p. 1643; July 16, 1920, p. 1743; July 30, 1920, p. 1836.

² Taken from bulletins of the International Office of Public Hygiene, May and June, 1920.

Typhus Fever—January–March, 1920.

During the month of January, 1920, there were reported in the civil population of Poland, including the eastern frontier with the exception of the Province of Volhynia, 34,522 cases of typhus fever with 4,414 fatalities, of which 22,090 cases with 3,465 fatalities occurred in the Province of Galicia. In Warsaw, 512 cases with 59 fatalities were reported.

During the month of February, 1920, 25,494 cases of typhus fever with 11,117 fatalities were reported for all Poland, comprising Russian Poland, Galicia, and Posen, 399 of these cases with 58 fatalities being reported for Warsaw. These figures do not cover the occurrence of typhus on the eastern frontier nor the morbidity and mortality from the disease in prison camps and in the armies of the interior zone and on the battle fronts. The most severe prevalence was reported in Galicia, with 19,638 cases with 8,481 fatalities.

During the month of March, 1920, 27,894 cases of typhus fever with 4,202 fatalities were reported in Poland among the civil population of Russian Poland, Galicia, and Posen. Galicia continued to be the great focus of outbreak and spread of the disease, with 22,017 reported cases with 3,681 fatalities.

Typhus Fever—Polish Armies.

Diffusion of typhus through the Polish armies, due to the continual movement of troops in contaminated regions, was reported during the month of January, 1920. The reported case mortality rate during that period was 7.75 per cent. During the months of February and March typhus was present with more or less intensity. During March, 1920, 5,201 cases with 160 fatalities were reported from the different fronts. In the hospitals of the military zones of the interior 508 cases, or a morbidity rate of 0.05 per cent of the effective force, were reported. After March 15, 1920, the epidemic gave signs of regression, and after April 1, 1920, normal summer conditions appeared to be established.

SUMATRA.**Prevention of Malaria on Vessels—Belawan.**

General regulations and recommendations have been issued for the prevention of outbreaks of malaria on vessels lading and unloading at Belawan, port of Medan, Island of Sumatra. These provide for the mooring of vessels at a distance from the pier after nightfall to prevent, in some degree, access of mosquitoes to the vessel; the lodging on shore of the entire crews of vessels, with the exception of necessary guards on board, during the night; and prophylactic treatment with quinine to crews both on shore and remaining on vessels, administration of quinine to begin nine days after arrival,

1 gram being served each day to all members of crews for three successive days, and beginning with the 16th day after arrival, to be served once every three days.

VIRGIN ISLANDS.

Contagious Diseases—July, 1920.

The occurrence of contagious diseases in the Virgin Islands during the month of July, 1920, has been reported as follows:

	Cases.	Remarks.
In St. Thomas and St. John:		
Chancroid.....	12	8 imported.
Dengue.....	1	
Dysentery.....	2	
Gonorrhea.....	20	12 imported.
