

ABSTRACT OF SANITARY REPORTS.

VOL. VI.

WASHINGTON, D. C., JULY 31, 1891.

No. 31.

[Published at the Marine-Hospital Bureau in accordance with act of Congress of April 29, 1878.]

UNITED STATES.

SPECIAL REPORTS.

Gulf quarantine station.

Under date of July 23, 1891, Surgeon R. D. Murray reports as follows concerning the British steamship *Nigretia* :

I have the honor to report the arrival this day of the British steamship *Nigretia*, one day from Pensacola quarantine, where she had lain for nine days, after three days' voyage from Vera Cruz. No yellow fever on board at Vera Cruz or on passage, but on the 15th, the day after arrival at Pensacola, the second engineer (Rowland) fell ill, and died on 21st July, having had albuminous urine and, as stated by the quarantine physician, yellow fever.

After burial of the corpse the stateroom was locked up and the vessel ordered to proceed to Chandeleur Island. On arrival here 1 case each of ascites, diarrhoea, and bronchitis are found, but no case of fever. Sick men were brought to station, and vessel held for disinfection. Of entire crew of 25, 24 have never had yellow fever.

Under date of July 25, Surgeon Murray reports as follows concerning the British ship *Ryerson* :

I have the honor to report the arrival in quarantine this day of the British ship *Ryerson*, from Rio for Ship Island, Miss.

Said vessel had one case of yellow fever at Rio, who recovered ; one case occurred at sea on June 7, and terminated fatally on June 11. She has a crew of 19 all told, 4 of which are negroes ; of the remainder 1 only has had yellow fever.

There has been no sickness on board since June 11, and the clothing of the man who died was immediately thrown overboard.

The vessel is extremely clean throughout, and is in good sanitary condition.

She is held for thorough disinfection.

Gulf quarantine station—Statement.

In view of incorrect newspaper reports that there have been ten cases of yellow fever at the Gulf quarantine station during the present quarantine season, it is deemed proper to state that there have been but two cases of yellow fever at said station during the present season, but that there have been twenty-two vessels disinfected at this station,

of which number eleven were undoubtedly infected. The station is temporarily in charge of Surgeon R. D. Murray, assisted by Dr. Charles Pelaez. The quarantine force, furthermore, comprises a skilled hospital steward and a full corps of attendants, with a disinfecting steamer and full complement of crew.

Since the above was written reports have been received from Surgeon R. D. Murray, dated July 26 and 27, stating that four cases of yellow fever have been removed to the lazaretto from the British steamship *Nigretia* above mentioned. The patients are the chief engineer, third mate, and the fireman and carpenter.

South Atlantic quarantine station.

Under date of July 18, 1891, Passed Assistant Surgeon White reports as follows :

I have the honor to report the following, relative to Norwegian bark *Albion*, which arrived here from Santos, Brazil, on July 16.

While in Santos seven men were sent to yellow fever hospital, including two captains, two mates, and sailmaker. Of these seven, four died, as follows : Two captains, one mate, and the sailmaker.

The last death (Captain Halonsen) occurred on April 10, and the vessel was subsequently subjected to disinfection in Santos.

While on the voyage to Savannah, Georgia, the steward became ill June 30, and second mate July 8, and upon arrival here the second mate died before I could reach the vessel, which I did at night, being informed of the urgency of the case. An autopsy revealed the fact that the cause of death was cardiac valvular disease.

The surviving patient, the steward, presents indications of having had acute nephritis, and although I can not as yet find any albumen, I believe such is the correct diagnosis. He had yellow fever in Santos about March last. Certainly neither of these cases are yellow fever.

The vessel is fairly clean, and the quarters for crew cleanly and fairly ventilated. Ballast of good stone, and the vessel being somewhat leaky, her bilge water is clean.

I shall treat her as an infected vessel, but do not think her to be fairly rated in that class.

VESSELS REMAINING, ARRIVING AT, AND DEPARTING FROM UNITED STATES QUARANTINE STATIONS.

^a Seven cases of yellow fever at Santos with 4 deaths.^b Inadvertently boarded the *Albion*.*Reports of States, and yearly and monthly reports of cities.*

ALABAMA—*Mobile*.—Month of June, 1891. Population, 31,076. Total deaths, 82, including phthisis pulmonalis 13.

CALIFORNIA.—Month of June, 1891. Reports to the State board of health from 75 cities and towns, having an estimated population of 675,954, show a total of 995 deaths, including phthisis pulmonalis, 140; enteric fever, 23; scarlet fever, 7; and diphtheria, 47.

COLORADO—*Denver*.—Month of June, 1891. Population, 106,713. Total deaths, 225, including phthisis pulmonalis, 29; enteric fever, 2; diphtheria, 26; measles, 5; and whooping cough, 4.

MASSACHUSETTS—*Springfield*.—Month of June, 1891. Population, 44,179. Total deaths, 60, including phthisis pulmonalis, 9; scarlet fever, 1; and measles, 1.

Worcester.—Month of June, 1891. Population, 84,655. Total deaths, 90, including phthisis pulmonalis 8 and influenza 1.

MICHIGAN.—Week ended July 18, 1891. Reports to the State board of health, Lansing, from 61 observers, indicate that typho-malarial fever, pleuritis, diarrhoea, intermittent fever, inflammation of bowels, cholera infantum, cholera morbus, and dysentery increased, and that membranous croup, inflammation of brain, pneumonia, puerperal fever, measles, and cerebro-spinal meningitis decreased in area of prevalence.

Diphtheria was reported present during the week at 28 places, scarlet fever at 36 places, enteric fever at 16 places, and measles at 21 places.

MISSOURI—*St. Louis*—Month of June, 1891. Population, 451,770. Total deaths, 840, including phthisis pulmonalis, 70; enteric fever, 11; scarlet fever, 3; diphtheria, 11; croup 3; measles, 7; and whooping cough, 11.

OHIO.—Month of June, 1891. Reports to the State board of health from 54 cities and towns, having an aggregate population of 1,250,734, show a total of 1,433 deaths, including phthisis pulmonalis, 151; enteric fever, 29; scarlet fever, 19; measles, 8; and whooping cough, 3.

TENNESSEE.—Month of June, 1891. Reports to the State board of health, Nashville, show that the principal diseases, named in the order of their greater prevalence, during the month, were malarial fevers, dysentery, diarrhoea, cholera morbus, cholera infantum, phthisis pulmonalis, and pneumonia. Enteric fever was reported in 7 counties, scarlet fever in 2 counties, influenza in 2 counties, diphtheria and croup in 1 county, measles in 5 counties, and whooping cough in 7 counties.

(Reports received through the Department of State and other channels.)

Sanitary commission at Constantinople—Report of United States commissioner—Cholera at Aleppo.

REPORT NO. 27.

In spite of the optimism of the sanitary physician at Aleppo, cholera has made its appearance again this year in that *vilayet*. It is not astonishing to see this scourge ravaging again the population of the empire. I think, on the contrary, that it would be astonishing to see the provinces of Turkey in a perfect sanitary condition.

The general sanitary administration sent, a long time ago, a circular to the provincial authorities, ordering preservative measures and generally all that they ought to do, in order to improve the sanitary condition of the cities and villages which cholera had visited that year. Nothing has been done. They begin again with quarantine cordons, the effect of which is already known. Since the first news of the outbreak of cholera, viz, since the 9th of June, up to the 28th of the same month, 55 deaths from cholera occurred, 14 at Herim, 24 at Hamam, 14 at Killi, and 3 at Alay bey.

The ships starting from the Gulf of Alexandretta, from Lovedic, to Caratach burun undergo five days quarantine at Clazomene, near Smyrna, or at Beyrout. At the last epidemic of cholera the Beyrout lazaretto gave a great deal of trouble to the general board of health. I have already mentioned in several reports this lazaretto. Finally it has been decided that another lazaretto will be built, but till now nothing has been done, and again the ships which undergo quarantine are sent to Beyrout temporarily until a new place for lazaretto will be chosen and the lazaretto built. Meanwhile the sanitary inspector at Beyrout states that it is impossible to make use of that lazaretto on account of its imperfections and filthiness.

SPIRIDION C. ZAVITZIANO.

CONSTANTINOPLE, *3d of July*, 1891.

BRAZIL—*Para*.—Month of June, 1891. Population, 80,000. Total deaths, 248, including yellow fever, 24; enteric fever, 9; phthisis pulmonalis, 17; leprosy, 1; and whooping cough, 1.

CUBA—*Havana*.—Under dates of July 18 and 25, 1891, the United States sanitary inspector makes the following weekly reports:

There were one hundred and forty deaths in this city during the week ending July 16.

Eleven of these deaths were caused by yellow fever, with approximately 65 new cases; 2 of the deaths were from pernicious fever, 3 from enteric fever, 2 from smallpox, and 1 from diphtheria.

Week ended July 23, 1891. Total deaths, 139, including yellow fever, 22, with 60 new cases; smallpox, 11; diphtheria, 3; pernicious fever, 2; and enteric fever, 4. Twenty-one of the deaths from yellow fever occurred in the military hospital, while only 1 death occurred in the city.

EGYPT.—Week ended June 18, 1891. The towns in upper and lower Egypt, including Gizeh and the Suez Canal, show a total of 1,271 deaths, including phthisis pulmonalis, 58; enteric fever, 65; smallpox, 3; measles, 64; and whooping cough, 13.

FRANCE—Marseilles.—Month of June, 1891. Population, 406,919. Total deaths, 816, including smallpox, 22; enteric fever, 27; scarlet fever, 2; diphtheria and croup, 52; and measles, 25.

GREAT BRITAIN—England—Sunderland.—Two weeks ended June 27, 1891. Population, 131,302. Total deaths, 94, including typhus fever 1.

Ireland.—The average annual death rate, represented by the deaths registered during the week ended July 11, in the 16 principal town districts of Ireland, was 17.2 a thousand of the population. The lowest rate was recorded in Dundalk, viz, 3.9, and the highest in Kilkenny, viz, 28.2 a thousand. In Dublin and suburbs 127 deaths were registered, including influenza, 1; enteric fever, 3; whooping cough, 3; and diphtheria, 1.

Scotland.—The deaths registered in eight principal towns during the week ended July 11 corresponded to an annual rate of 18.8 a thousand of the population, which is estimated at 1,345,563. The lowest mortality was recorded in Perth, viz, 13.5, and the highest in Glasgow, viz, 21.5 a thousand. The aggregate number of deaths registered from all causes was 484, including measles, 12; scarlet fever, 1; diphtheria, 5; whooping cough, 14; fever, 4; and diarrhoea, 13.

INDIA—Singapore.—Month of May, 1891. Total deaths, 602, including "fevers," 194; smallpox, 3; cholera, 2; and beri-beri, 30.

NETHERLANDS.—Month of April, 1891. Reports from the 12 principal cities, having an aggregate population of 1,198,116, show a total of 2,580 deaths, including phthisis pulmonalis and throat diseases, 270; typhus and enteric fevers, 3; diphtheria, 31; croup, 23; whooping cough, 48; and measles, 21.

SPAIN—Barcelona.—Month of June, 1891. Population, 272,000. Total deaths, 581, including smallpox, 11; enteric fever, 21; and measles, 24.

SWITZERLAND.—Week ended June 20, 1891. Reports from 15 cities, having an aggregate population of 503,503, show a total of 211 deaths, including phthisis pulmonalis, 39; scarlet fever, 2; diphtheria and croup, 5; measles, 3; and whooping cough, 5.

Zurich.—Month of May, 1891. Population, 91,323. Total deaths, 242, including phthisis pulmonalis, 27; typhus fever, 1; scarlet fever, 1; diphtheria and croup, 7; and whooping cough, 3.
